2015 Seventh International Workshop on Signal Design and its Applications in Communications (IWSDA 2015)

Bengaluru, India
14-18 September 2015
# Table of Contents

**Preface**

**Conference Organization**

**Technical Program**

## I. Sequences

1.1 **An Optimal Partial Transmit Sequence Combination Method for Peak-to-Average Power Ratio Reduction in SC-FDMA system** .................................................................1  
Wu MengChun and Hayashi Takafumi

1.2 **Ensembles of sequences and arrays** .................................................................5  
Anatolii Leukhin and Andrew Tirkel

1.3 **On Optimal Constructions for multidimensional arrays and their linear complexity** .........................10  
Domingo GomezPerez, Jaime Gutierrez, Ana Gomez and Oscar Moreno

1.4 **On Linear Complexity of Periodic Sequences over Extension Fields from Cyclic Difference sets** ..........15  
Takayasu Kaida and Junru Zheng

1.5 **Construction of near-complementary sequences of length n • 2^m** ........................................19  
Gaofei Wu and Zilong Wang

## II. Computation Theory

2.1 **A RLS Algorithm with Evolving Forgetting Factor** ........................................24  
Sheng Zhang and Jiashu Zhang

2.2 **Multiplication in a Galois Ring** .........................................................................28  
Sedat Akleylek and Ferruh Ozbudak

2.3 **Computationally Efficient Sparse Polynomial Interpolation** ......................................33  
Sameer Pawar, Venkatesan Nallampatti Ekambaram and Kannan Ramchandran.

2.4 **The Computational Complexity of some Algorithms for the Rank Bounded Distance on Cyclic Codes** .................................................................38  
Junru Zheng and Takayasu Kaida

2.5 **Statistical Dependencies in the Self-Shrinking Generator** ........................................42  
Serdar Boztas and Ahmed Alamer
III. Cyclic Codes

3.1 Cyclic codes over $\mathbb{Z}_4+u\mathbb{Z}_4$ .................................................. 47
   Rama Krishna Bandi and Maheshanand Bhaintwal

3.2 On Skew Cyclic Codes over $\mathbb{GR}(4, 2) + u\mathbb{GR}(4, 2)$ .......................... 52
   Amit Sharma and Maheshanand Bhaintwal

3.3 Self-dual Cyclic Codes Over $\mathbb{Z}_4+u\mathbb{Z}_4$ ........................................... 57
   Rong Luo and Udaya Parampalli

3.4 On a Conjecture about a Class of Optimal Ternary Cyclic Codes ....................... 62
   Nian Li, Zhengchun Zhou and Tor Helleseth

3.5 A New Class of Optimal Optical Orthogonal Codes with Weight Six ..................... 66
   SuWang, LingyeWang and JinhuaWang

IV. Cryptography, Privacy and Security

4.1 Web Access Patterns Reveal Insiders' Behaviour ........................................... 70
   Anagi Gamachchi and Serdar Boztas

4.2 A Secure and Robust Dynamic ID-Based Mutual Authentication Scheme with Smart Card
   Using Elliptic Curve Cryptography .............................................................. 75
   Mrudula Sarvabhatla and Chandra Sekhar Vorugunti

4.3 Initial Results on the Rotation Symmetric BentNegabent Functions ........................ 80
   Sumanta Sarkar and Thomas Cusick

4.4 An Improvement of the Data Hiding Scheme Based on Complete Complementary Codes 85
   Tetsuya Kojima and Ryusuke Mayuzumi

4.5 Feeding back the Output or Sharing State, Which is Better for the Security of the Degraded
   Wiretap Channel with Noncausal Channel State Information at the Transmitter? ........ 90
   Bin Dai, Zheng Ma and Linman Yu

V. Coding Theory

5.1 Sufficient Conditions for an $(n,1)$ Mother Code and Its Puncturing Pattern to generate a Given
   Convolutional Code ....................................................................................... 95
   Habong Cheong, Hwanseok Jang and Jinwoo Seong

5.2 On Shortening Construction of Self-orthogonal Quaternion Codes ........................... 99
   Lubin Guo, Qiang Fu, Ruihu Li and Xueliang Li

5.3 Rate-Split Based Decode-and-Forward Protocols for Cooperative Communications 103
   Hsiaofeng Francis Lu

5.4 On Dress Codes with Flowers ........................................................................ 108
   Krishna Gopal Benerjee and Manish Kumar Gupta

5.5 Lattice Network Codes over Optimal Lattices in Low Dimensions ......................... 113
   Kenneth Shum and Tyler Sun
VI. Coding for Communication and Storage

6.1 New Repair strategy of Hadamard Minimum Storage Regenerating Code for Distributed Storage System
Xiaohu Tang, Bin Yang and Jie Li

6.2 On Optimal Family of Codes for Archival DNA Storage
Dixita Limbachiya, Vijay Dhameliya, Madhav Khakhar and Manish Kumar Gupta

6.3 Locally Repairable Fractional Repetition Codes
MiYoung Nam, JungHyun Kim and HongYeop Song

6.4 A Lattice Coding Based Non-Orthogonal Multiple Access Scheme
Jinchen Bao, Zheng Ma, Mahamuda Alhaji Mahamadu and Zhiguo Ding

6.5 New Optimal \((14p, \{4,5\}, 1, (3/4,1/4))\)OOCs
Huangsheng Yu, Jia Tong and Wu Dianhua

VII. Sequences

7.1 Quasi-orthogonal Multiphase Sequences Based on Legendre Symbols
Vladimir E. Gantmakher and Mikhail V. Zaleshin

7.2 New Unimodular Sequences with Two-level Periodic Autocorrelation
Anatolii Leukhin and Pingzhi Fan

7.3 The Second Order Correlation Measure of Zadoff-Chu Sequences
TaeKyo Lee, JinHo Chung and Kyeongcheol Yang

7.4 Periods of Sequences Generated by the Logistic Map over Finite Fields with Control Parameter Four
Kazuyoshi Tsuchiya and Yasuyuki Nogami

7.5 Irreducible Cyclic \(Z_4\) Codes and Allied Sequences
Adel Alahmadi, Tor Helleseth, Najat Muthana, Atiqah Almuzaini and Patrick Sole

VIII. Coding, Networking and Spectrum Sensing

8.1 Multi-Dimensional Anderson-Darling Statistic Based Goodness-of-Fit Test for Spectrum Sensing
Sanjeev Gurugopinath and Samudhyatha B.

8.2 Performance of Wideband Spectrum Sensing Under Fading Channel
Kamal Captain and Manjunath Joshi

8.3 Information Set and Iterative Encoding for Affine Grassmann Codes
Fernando Pinero and Sudhir Ghorpade

8.4 A Preamble Allocation Method for M2M Traffics in 3GPP LTE-A Networks
Yang Liu, Pingzhi Fan and Li Hao

8.5 Threshold Upper Bounds and Optimized Design of Protograph LDPC Codes for the Binary Erasure Channel
Surajkumar Harikumar, Jayanth Ramesh, Manikandan Srinivasan and Andrew Thangaraj
IX. Frequency Hopping Sequences and ZCZ Sequences

9.1 Optimal Frequency Hopping Sequence Sets under Maximum Aperiodic Hamming Correlation--191
   Changyuan Wang and Daiyuan Peng

9.2 On Bent Type ZCZ Codes---------------------------------------------------------------196
   Shinya Matsufuji

9.3 On a Block Coding ZCZ-CDMA Scheme with High-Speed Processing------------------------200
   Sho Kuroda, Shinya Matsufuji, Yuta Ida and Takahiro Matsumoto

9.4 A Novel Class of QPSK Zero-Correlation Zone Sequence Sets ----------------------------205
   Takafumi Hayashi, Yodai Watanabe, Anh Pham, Toshiaki Miyazaki, Shinya Matsufuji and Takao
   Maeda

Author Index-------------------------------------------------------------------------209
