Table of contents

**Volume 702**

18th International Conference on Recent Progress in Many-Body Theories (MBT18) 16–21 August 2015, Niagara Falls, USA

Accepted papers received: 14 March 2016 Published online: PI Online

**Preface**

011001
OPEN ACCESS
*18th International Conference on Recent Progress in Many-Body Theories (MBT18)*

E. Krotscheck and G. Ortiz

011002
OPEN ACCESS
*18th International Conference on Recent Progress in Many-Body Theories (MBT18)*

**Papers**

012001
OPEN ACCESS
*Frustrated Heisenberg antiferromagnet on the honeycomb lattice with spin quantum number s > 1*

P H Y Li, R F Bishop and C E Campbell  pg. 1

012002
OPEN ACCESS
*Phase transition to the Fulde–Ferrell–Larkin–Ovchinnikov state in a quasi-one-dimensional organic superconductor with anion order*

Nobumi Miyawaki and Hiroshi Shimahara  pg. 20
012003  
OPEN ACCESS  
Charge instabilities of the two-dimensional Hubbard model with attractive nearest neighbour interaction

Raymond Frésard, Kevin Steffen and Thilo Kopp  pg. 26

012004  
OPEN ACCESS  
On the new Continuous Matrix Product Ansatz

S. S. Chung, S. Bauman, Kuei Sun and C. J. Bolech  pg. 38

012005  
OPEN ACCESS  
Signature of the many-particle localization transition in the entanglement spectrum

Richard Berkovits  pg. 45

012006  
OPEN ACCESS  
On the absence of higher generations of incompressible daughter states of composite Fermion quasiparticles

John J. Quinn  pg. 50

012007  
OPEN ACCESS  
Correlation diagrams: an intuitive approach to correlations in quantum Hall systems

S. B. Mulay, J. J. Quinn and M. A. Shattuck  pg. 63

012008  
OPEN ACCESS  
Many-body electron correlations in graphene

David Neilson, Andrea Perali and Mohammad Zarenia  pg. 72
On dissipative effects in volume plasmon response
P.-G. Reinhard, E. Krotscheck and E. Suraud  pg. 80

Electronic and optical properties of a double quantum dot molecule with Kane's dispersion law
K G Dvoyan, A A Tshantshapanyan, S G Matinyan and B Vlahovic  pg. 84

Theory of electronic states and direct light absorption in the biconical (superellipsoidal) quantum dot
A A Tshantshapanyan, K G Dvoyan and B Vlahovic  pg. 94

Conventional and Unconventional Pairing and Condensates in Dilute Nuclear Matter
John W Clark, Armen Sedrakian, Martin Stein, Xu-Guang Huang, Victor A Khodel, Vasily R Shaginyan and Mikhail V Zverev  pg. 105

A further update on possible crises in nuclear-matter theory
W. H. Dickhoff  pg. 124

Neutron matter with Quantum Monte Carlo: chiral 3N forces and static response
M Buraczynski, S Gandolfi, A Gezerlis, A Schwenk and I Tews  pg. 133
Comparative study of the \textit{LOCV} and the \textit{FHNC} approaches for the nucleonic matter problem

Azar Tafrihi and Majid Modarres  pg. 140

Variational calculations with explicit energy functionals for fermion systems at zero temperature

M Takano, T Suzuki and N Sakumichi  pg. 155
