Main Research

Refactoring
Domino Effect: Move More Methods Once a Method is Moved
Hui Liu, Yuting Wu, Wenmei Liu, Qiurong Liu, and Chao Li

Supporting Selective Undo for Refactoring
Xiao Cheng, Yuting Chen, Zhenjiang Hu, Tao Zan, Mengyu Liu, Hao Zhong, and Jianjun Zhao

Finding the Best Compromise Between Design Quality and Testing Effort During Refactoring
Rodrigo Morales, Aminata Sabané, Pooya Musavi, Foutse Khomh, Francisco Chicano, and Giuliano Antoniol

Studying the Relation between Anti-Patterns in Design Models and in Source Code
Bilal Karasneh, Michel R. V. Chaudron, Foutse Khomh, and Yann-Gaël Guéhéneuc

Clones
An Empirical Study on Recommendations of Similar Bugs
Henrique Rocha, Marco Tulio Valente, Humberto Marques-Neto, and Gail C. Murphy
Cross-Architecture Binary Semantics Understanding via Similar Code Comparison ..........................................................57
  Yikun Hu, Yuanyuan Zhang, Juanru Li, and Dawu Gu

Bug Replication in Code Clones: An Empirical Study ..............................................................................................................68
  Judith F. Islam, Manishankar Mondal, and Chanchal K. Roy

On the Relationship of Inconsistent Software Clones and Faults: An Empirical Study ..........................................................79
  Stefan Wagner, Asim Abdulkhaleq, Kamer Kaya, and Alexander Paar

People

Software-Specific Named Entity Recognition in Software Engineering Social Content ..........................................................90
  Deheng Ye, Zhenchang Xing, Chee Yong Foo, Zi Qun Ang, Jing Li, and Nachiket Kapre

Forking and the Sustainability of the Developer Community Participation — An Empirical Investigation on Outcomes and Reasons .................................................................102
  Ayushi Rastogi and Nachiappan Nagappan

More Common Than You Think: An In-depth Study of Casual Contributors ...........................................................................112
  Gustavo Pinto, Igor Steinmacher, and Marco Aurélio Gerosa

A Study of Visual Studio Usage in Practice .......................................................................................................................................124
  Sven Amann, Sebastian Proksch, Sarah Nadi, and Mira Mezini

New Sources

Evaluating Automatic Spreadsheet Metadata Extraction on a Large Set of Responses from MOOC Participants .................................................................135
  Sohon Roy, Felienne Hermans, Efthimia Aivaloglou, Jos Winter, and Arie van Deursen

Localizing Multiple Faults in Simulink Models .................................................................................................................................146
  Bing Liu, Lucia, Shiva Nejati, Lionel Briand, and Thomas Bruckmann

A More Accurate Model for Finding Tutorial Segments Explaining APIs ......................................................................................157
  He Jiang, Jingxuan Zhang, Xiaochen Li, Zhilei Ren, and David Lo

An Empirical Study on the Use of CSS Preprocessors ...................................................................................................................168
  Davood Mazinanian and Nikolaos Tsantalis

Quality

Examining the Impact of Self-Admitted Technical Debt on Software Quality .................................................................................179
  Sultan Wehaibi, Emad Shihab, and Latifa Guerrouj

The Impact of Human Discussions on Just-in-Time Quality Assurance: An Empirical Study on OpenStack and Eclipse ......................................................................................189
  Parastou Tourani and Bram Adams

Generalizing the Analysis of Evolutionary Coupling for Software Change Impact Analysis .................................................................................................201
  Thomas Rolfsnes, Stefano Di Alesio, Razieh Behjati, Leon Moonen, and Dave W. Binkley
History Driven Program Repair .................................................................213
    Xuan Bach D. Le, David Lo, and Claire Le Goues

Instrumental

Negative Effects of Bytecode Instrumentation on Java Source Code Coverage ......................................................225
    Dávid Tengeri, Ferenc Horváth, Árpád Beszédes, Tamás Gergely, and Tibor Gyimóthy

UROBOROS: Instrumenting Stripped Binaries with Static Reassembling ..........................................................236
    Shuai Wang, Pei Wang, and Dinghao Wu

Towards Transparent Introspection ........................................................................................................................248
    Kevin Leach, Chad Spensky, Westley Weimer, and Fengwei Zhang

Linvail: A General-Purpose Platform for Shadow Execution of JavaScript ........................................................260
    Laurent Christophe, Elisa Gonzalez Boix, Wolfgang De Meuter, and Coen De Roover

PoLemic

Custom-Tailored Variability Mining for Block-Based Languages .................................................................271
    David Wille, Sandro Schulze, Christoph Seidl, and Ina Schaefer

A Case Study on Type Hints in Method Argument Names in Pharo Smalltalk Projects .........................................283
    Boris Spasojević, Mircea Lungu, and Oscar Nierstrasz

Visualizing Data-Flows in Functional Programs ..............................................................................................293
    Tobias Weck and Matthias Tichy

Tracking Null Checks in Open-Source Java Systems .........................................................................................304
    Haidar Osman, Manuel Leuenberger, Mircea Lungu, and Oscar Nierstrasz

IR-onic Mining

Parameterizing and Assembling IR-Based Solutions for SE Tasks Using Genetic Algorithms ........................................314
    Annibale Panichella, Bogdan Dit, Rocco Oliveto, Massimiliano Di Penta, Denys Poshyvanyk, and Andrea De Lucia

Examining the Stability of Logging Statements ..................................................................................................326
    Suhas Kabinna, Weiyi Shang, Cor-Paul Bezem, and Ahmed E. Hassan

Mining Analogical Libraries in Q&A Discussions — Incorporating Relational and Categorical Knowledge into Word Embedding ..................................................................................................338
    Chunyang Chen, Sa Gao, and Zhenchang Xing

RACK: Automatic API Recommendation Using Crowdsourced Knowledge .........................................................349
    Mohammad Masudur Rahman, Chanchal K. Roy, and David Lo
**Crystal Balls**

Do Developers Deprecate APIs with Replacement Messages? A Large-Scale Analysis on Java Systems ................................................................. 360

*Gleison Brito, Andre Hora, Marco Tulio Valente, and Romain Robbes*

MICHAC: Defect Prediction via Feature Selection Based on Maximal Information Coefficient with Hierarchical Agglomerative Clustering ................................................................. 370

*Zhou Xu, Jifeng Xuan, Jin Liu, and Xiaohui Cui*

On the Detection of Licenses Violations in the Android Ecosystem ................................................................. 382

*Ons Mlouki, Foutse Khomh, and Giuliano Antoniol*

Do Code Smells Impact the Effort of Different Maintenance Programming Activities? ................................................................. 393

*Zéphyrin Soh, Aiko Yamashita, Foutse Khomh, and Yann-Gaël Guéhéneuc*

**Mobile**

An Investigation into the Use of Common Libraries in Android Apps ................................................................. 403

*Li Li, Tegawendé F. Bissyandé, Jacques Klein, and Yves Le Traon*

Revisiting the Description-to-Behavior Fidelity in Android Applications ................................................................. 415

*Le Yu, Xiapu Luo, Chenxiong Qian, and Shuai Wang*

Mining Android Apps to Recommend Permissions ................................................................. 427

*Md. Yasser Karim, Huzefa Kagdi, and Massimiliano Di Penta*

Optimizing User Experience in Choosing Android Applications ................................................................. 438

*Rubén Saborido, Giovanni Beltrame, Foutse Khomh, Enrique Alba, and Giuliano Antoniol*

**Program Analysis**

Efficient and Precise Dynamic Slicing for Client-Side JavaScript Programs ................................................................. 449

*Jiabin Ye, Cheng Zhang, Lei Ma, Haibo Yu, and Jianjun Zhao*

Supporting Program Analysis for Non-Mainstream Languages: Experiences and Lessons Learned ................................................................. 460

*Andreas Grimmer, Florian Angerer, Herbert Prähofer, and Paul Grünbacher*

Analyzing the State of Static Analysis: A Large-Scale Evaluation in Open Source Software ................................................................. 470

*Moritz Beller, Radjino Bholanath, Shane Mcintosh, and Andy Zaidman*

Marea: A Semi-Automatic Decision Support System for Breaking Dependency Cycles ................................................................. 482

*Andrea Caracciolo, Bledar Aga, Mircea Lungu, and Oscar Nierstrasz*
Eco-Logical

When GitHub Meets CRAN: An Analysis of Inter-Repository Package Dependency Problems .................................................................493
Alexandre Decan, Tom Mens, Maëlick Claes, and Philippe Grosjean

Achieving Knowledge Evolution in Dynamic Software Product Lines .................................................................505
Lorena Arcega, Jaime Font, Øystein Haugen, and Carlos Cetina

Haskell in Green Land: Analyzing the Energy Behavior of a Purely Functional Language .................................................................517
Luis Gabriel Lima, Francisco Soares-Neto, Paulo Lieuthier, Fernando Castor,
Gilberto Melfe, and João Paulo Fernandes

Client-Side Energy Efficiency of HTTP/2 for Web and Mobile App Developers .................................................................529
Shaiful Alam Chowdhury, Varun Sapra, and Abram Hindle

Release Engineering

Predicting Build Co-changes with Source Code Change and Commit Categories .................................................................541
Christian Macho, Shane McIntosh, and Martin Pinzger

Release Practices for Mobile Apps — What do Users and Developers Think? .................................................................552
Maleknaz Nayebi, Bram Adams, and Guenther Ruhe

A Large Scale Study of Multiple Programming Languages and Code Quality .................................................................563
Pavneet Singh Kochhar, Dinusha Wijedasa, and David Lo

Botched Releases: Do We Need to Roll Back? Empirical Study on a Commercial Web App .................................................................574
Noureddine Kerzazi and Bram Adams

Early Research Achievements

ERA: APIs, Refactoring, and Design

Parameter Values of Android APIs: A Preliminary Study on 100,000 Apps .................................................................584
Li Li, Tegawendé F. Bissyandé, Jacques Klein, and Yves Le Traon

Native or Web? A Preliminary Study on the Energy Consumption of Android Development Models .................................................................589
Wellington Oliveira, Wesley Torres, Fernando Castor, and Bianca H. Ximenes

Composite Refactoring for Decoupling Multiple Classes .................................................................594
Yusuke Takahashi and Naoya Nitta

A Code Refactoring Dataset and Its Assessment Regarding Software Maintainability .................................................................599
István Kádár, Péter Hegedűs, Rudolf Ferenc, and Tibor Gyimóthy
Frankencode: Creating Diverse Programs Using Code Clones .................................................................604

  Hayley Borck, Mark Boddy, Ian J. De Silva, Steven Harp, Ken Hoyme, Steven Johnston,
  August Schwerdfeger, and Mary Southern

Antipattern and Code Smell False Positives: Preliminary Conceptualization
and Classification ........................................................................................................................................609

  Francesca Arcelli Fontana, Jens Dietrich, Bartosz Walter, Aiko Yamashita,
  and Marco Zanoni

Identifying Utility Functions Using Random Forests .................................................................................614

  Tamara Mendes, Marco Tulio Valente, Andre Hora, and Alexander Serebrenik

ERA: Mining and Empirical Studies
Towards Building API Usage Example Metrics ..........................................................................................619

  Stevche Radevski, Hideaki Hata, and Kenichi Matsumoto

Software Language Identification with Natural Language Classifiers .....................................................624

  Juriaan Kennedy van Dam and Vadim Zaytsev

At Ease with Your Warnings: The Principles of the Salutogenesis Model Applied
to Automatic Static Analysis ..................................................................................................................629

  Jan-Peter Ostberg and Stefan Wagner

An Empirical Study on the Usage of the Swift Programming Language ..................................................634

  Marcel Rebouças, Gustavo Pinto, Felipe Ebert, Wesley Torres, Alexander Serebrenik,
  and Fernando Castor

AutoBench: Finding Workloads That You Need Using Pluggable Hybrid Analyses .................................639

  Yudi Zheng, Andrea Rosà, Luca Salucci, Yao Li, Haiyang Sun, Omar Javed,
  Lubomir Bulej, Lydia Y. Chen, Zhengwei Qi, and Walter Binder

Analyzing the Decision Criteria of Software Developers Based on Prospect Theory ............................644

  Kanako Kina, Masateru Tsunoda, Hideaki Hata, Haruaki Tamada, and Hiroshi Igaki

Tool Demonstrations
BUMPER: A Tool for Coping with Natural Language Searches of Millions of Bugs
and Fixes .....................................................................................................................................................649

  Mathieu Nayrolles and Abdelwahab Hamou-Lhadj

BINSEC/SE: A Dynamic Symbolic Execution Toolkit for Binary-Level Analysis ....................................653

  Robin David, Sébastien Bardin, Thanh Dinh Ta, Laurent Mounier, Josselin Feist,
  Marie-Laure Potet, and Jean-Yves Marion

CoreTAna: A Trace Analyzer for Reverse Engineering Real-Time Software .............................................657

  Andreas Sailer, Michael Deubzer, Gerald Lüttgen, and Jürgen Mottok

Supporting Merge Conflict Resolution by Using Fine-Grained Code Change History ............................661

  Yuichi Nishimura and Katsuhisa Maruyama
Managing Traceability Links with MaTraca .................................................................665
  Angela Lozano, Carlos Noguera, and Viviane Jonckers

Automated Generalization and Refinement of Code Templates with Ekeko/X .........................669
  Tim Molderez and Coen De Roover

**Industrial Research**

Improving the Performance of a Large Scale Spreadsheet: A Case Study ........................................673
  Alaaeddin Swidan, Felienne Hermans, and Ruben Koesoemovidjojo

A Systematic Framework for Modernizing Legacy Application Systems ........................................678
  Timothy C. Fanelli, Scott C. Simons, and Sean Banerjee

Experience Report on Building ASTM Based Tools for Multi-language Reverse Engineering .................................................................683
  Günter Fleck, Wilhelm Kirchmayr, Michael Moser, Ludwig Nocke, Josef Pichler, Rudolf Tober, and Michael Witlatschil

On Error-Class Distribution in Automotive Model-Based Software ................................................688
  Harald Altinger, Yanja Dajsuren, Sebastian Siegl, Jurgen J. Vinju, and Franz Wotawa

Designing and Developing Automated Refactoring Transformations: An Experience Report .................................................................693
  Gábor Szőke, Csaba Nagy, Rudolf Ferenc, and Tibor Gyimóthy

**Author Index - Volume 1** .................................................................................................................698
2016 IEEE 23rd International Conference on Software Analysis, Evolution, and Reengineering (SANER 2016)

Suita, Osaka, Japan
14-18 March 2016

Volume 2
Pages 1-33
First International Workshop on Validating Software Tests—VST 2016

Model Inference
Towards Inferring Environment Models for Control Functions from Recorded Signal Data ................................................................. 1
Henrik Peters, Falk Howar, and Andreas Rausch

Discovering and Validating Concurrency Specification from Test Executions ................................................................. 5
Pablo Gonzalez-de-Aledo, Alvaro Diaz Suarez, Pablo Sanchez, and Ralf Huuck

Trace Files for Automatic Memory Management Systems ................................................................. 9
Md. Mazder Rahman, Konstantin Nasartschuk, Kenneth B. Kent, and Gerhard W. Dueck

Metrics
Assessing the Test Suite of a Large System Based on Code Coverage, Efficiency and Uniqueness ................................................................. 13
Laszló Vidiacs, Ferenc Horváth, Dávid Tengeri, and Árpád Beszédes

Using the City Metaphor for Visualizing Test-Related Metrics ................................................................. 17
Gergő Balogh, Tamás Gergely, Árpád Beszédes, and Tibor Gyimóthy

Precondition Coverage in Software Testing ................................................................. 21
Cyrille Artho, Quentin Gros, and Guillaume Rousset
2016 IEEE 23rd International Conference on Software Analysis, Evolution, and Reengineering

SANER 2016

Message from the IWSC 2016 Chairs...................................................................................................................vii
IWSC 2016 Organizing Committee..........................................................................................................................viii

10th International Workshop on Software Clones—IWSC 2016

Detection and Analysis

Software-Clone Rates in Open-Source Programs Written in C or C++ ...............................................................1
  Rainer Koschke and Saman Bazrafshan

A Comparative Study on Vulnerabilities in Categories of Clones and Non-cloned Code .................................8
  Md. R. Islam and Minhaz F. Zibran

Assessing the Differences of Clone Detection Methods Used in the Fault-Prone Module Prediction ..................15
  Masateru Tsunoda, Yasutaka Kamei, and Atsushi Sawada

Towards Detection and Analysis of Interlanguage Clones for Multilingual Web Applications .......................17
  Yuta Nakamura, Eunjong Choi, Norihiro Yoshida, Shusuke Haruna, and Katsuro Inoue

Introducing Parameter Sensitivity to Dynamic Code-Clone Analysis Methods ..............................................19
  Toshihiro Kamiya

Challenges in Behavioral Code Clone Detection .................................................................................................21
  Fang-Hsiang Su, Jonathan Bell, and Gail Kaiser

Application of Clone Detection

Combining Clone Detection and Latent Semantic Indexing to Detect Re-implementations ................................23
  Veronika Bauer, Tobias Völke, and Sebastian Eder
Extensions of Component Rank Model by Taking into Account for Clone Relations ..........................................................30
  Reishi Yokomori, Norihiro Yoshida, Masami Noro, and Katsuro Inoue

Pattern Analysis of TXL Programs ........................................................................................................................................37
  Ashiqur Rahman and James R. Cordy

  Manishankar Mondal, Chanchal K. Roy, and Kevin A. Schneider

Towards a Structural Clone Based Recommender System .....................................................................................................51
  Shamsa Abid and Hamid Abdul Basit

Management

Duplication for the Removal of Duplication .............................................................................................................................53
  Ran Ettinger and Shmuel Tyszberowicz

Towards Implementation of an Integrated Clone Management Infrastructure ...........................................................................60
  Minhaz F. Zibran

Author Index - IWSC ..............................................................................................................................................62
Message from the PPAP 2016 Chairs..................................................................................................................................................vi

Third International Workshop on Patterns Promotion and Anti-patterns Prevention—PPAP 2016
Do Developers Focus on Severe Code Smells? ..................................................................................................................................1
  Tsubasa Saika, Eunjong Choi, Norihiro Yoshida, Shusuke Haruna, and Katsuro Inoue
ACDPR: A Recommendation System for the Creational Design Patterns Using Anti-patterns .................................................................4
  Nadia Nahar and Kazi Sakib
Understanding the Evolution of Code Smells by Observing Code Smell Clusters .................................................................8
  Ahmad Tahmid, Nadia Nahar, and Kazi Sakib

Author Index - PPAP ..........................................................................................................................................................12
