2016 IEEE 29th International Conference on Software Engineering Education and Training (CSEET 2016)

Dallas, Texas, USA
5 – 6 April 2016
# Table of Contents

- **Message from General Chair** ........................................................................................................... ix
- **Message from Program Chairs** .......................................................................................................... x
- **Organizing Committee** .................................................................................................................... xii
- **Program Committee** .......................................................................................................................... xiii
- **Steering Committee** ........................................................................................................................... xv
- **Keynote** .................................................................................................................................................. xvi

## Panel I: Why You Should Be Teaching Deployment in Your Curriculum!

## Panel II: How Much Software Engineering We Can Teach for K-12 Students?

## Panel III: Teaching Software Testing from an Industry Perspective

## Panel IV: Delivering Software Engineering Content to Computer Science Majors

## Session I: Practice Based Education

**Practice Based Studio** .......................................................................................................................... 1  
*Anthony J. Lattanze*

**An Athletic Approach to Software Engineering Education** ........................................................................... 8  
*Philip Johnson, Dan Port, and Emily Hill*

## Session II: Industry Relevance and Alignment

**Impact of the Use of Industrial Modelling Tools on Modelling Education** ................................................. 18  
*Grischa Liebel, Rogardt Heldal, and Jan-Philipp Steghöfer*
Meeting Industry Needs for Secure Software Development .................................................................28
    Nancy R. Mead, Girish Seshagiri, and Julie Howar

Session III: Teaching Project Management
Teaching Project Planning with No Project ..........................................................................................37
    Dennis J. Frailey
An Instructional Unit for Teaching Project Management Tools Aligned with PMBOK ..........................46
    Rafael Queiroz Gonçalves and Christiane Gresse Von Wangenheim
Teaching Software Estimation through LEGOs ...............................................................................56
    Ye Yang and Linda Laird

Session IV: Teaching SE Methods and Processes I
Tool-Assisted Loop Invariant Development and Analysis .................................................................66
    Caleb Priester, Yu-Shan Sun, and Murali Sitaraman
A Conceptual Graphs Framework for Teaching UML Model-Based Requirements Acquisition .............................71
    Bingyang Wei, Harry S. Delugach, Eduardo Colmenares, and Catherine Stringfellow
Experience Report of Teaching Agile Collaboration and Values: Agile Software Development in Large Student Teams .................................................................76
    Andreas Meier, Martin Kropp, and Gerald Perellano
Enhancing Object-Oriented Programming Comprehension Using Optimized Sequence Diagram .................................81
    Madhusudan Srinivasan, Young Lee, and Jeong Yang
Dynamic Software Updating Techniques in Practice and Educator’s Guides: A Review .................................................................86
    Ville Ilvonen, Petri Ihanlota, and Tommi Mikkonen

Session V: Teaching SE Methods and Processes II
An Object-Oriented Analysis and Design Environment ......................................................................91
    David Kung and Jeff Lei
Supporting Software Architecture Learning Using Runtime Visualization ............................................101
    John C. Georgas, James D. Palmer, and Michael J. McCormick
Code Readability Testing, an Empirical Study ......................................................................................111
    Todd Sedano
Teaching Agile Collaboration Skills in the Classroom .........................................................................118
    Martin Kropp, Andreas Meier, and Robert Biddle
Session VI: Curricula, Programs and Project Based Education

Strengthening the “Engineering” in Software Engineering Education: A Software Engineering Bachelor of Engineering Program for the 21st Century .......................................................128

Linda Laird

Software Engineering in Primary and Secondary Schools - Informatics

Education is more than Programming ........................................................................................................132

Andreas Bollin, Stefan Pasterk, Peter Antonitsch, and Barbara Sabitzer

Which Combinations of Personal Characteristic Types are more Effective in Different Project-Based Learning Courses? .................................................................137

Yusuke Sunaga, Masashi Shuto, Hironori Washizaki, Katsuhiko Kakehi,
Yoshiaki Fukazawa, Shoso Yamato, and Masashi Okubo

Hammer and Nails - Crucial Practices and Tools in Ad Hoc Student Teams ...........................................142

Marko Leppänen, Samuel Lahtinen, and Petri Ihantola

Session VII: Assessment

A Systematic Literature Review of Assessment Tools for Programming Assignments .................................................................147

Draylson M. Souza, Katia R. Felizardo, and Ellen F. Barbosa

A Generic E-Assessment Process Development Based on Reverse Engineering and Cloud Services .................................................................157

Fahima Hajjej, Yousra Bendaly Hlaoui, and Leila Jemni Ben Ayed

Session VIII: Teaching SE Methods and Processes III

An Integrated Approach to the Requirements Engineering and Process Modelling Teaching .................................................................166

George Marsicano, Fabiana Freitas Mendes, Mauricio Vidotti Fernandes,
and Sergio Antônio Andrade de Freitas

Session IX: Project Based Education

Green-Lighting Proposals for Software Engineering Team-Based Project Courses .................................................................175

Todd Sedano, Arthi Rengasamy, and Cécile Péraire

Project-Based Learning with Examples from Industry in University Courses: An Experience Report from an Undergraduate Requirements Engineering Course .................................................................184

Marian Daun, Andrea Salmon, Thorsten Weyer, Klaus Pohl,
and Bastian Tenbergen
Generating Software Engineers by Developing Web Systems: A Project-Based Learning Case Study ................................................................. 194
Patrick Letouze, J. I. M. de Souza Júnior, and Valéria Martins Da Silva

Session X: Emerging Challenges and Issues
PERCCOM: A Master Program in Pervasive Computing and COMmunications for Sustainable Development ................................................................. 204
Jari Porras, Ahmed Seffah, Eric Rondeau, Karl Andersson, and Alexandra Klimova
Matthew Bass

Session XI: Teaching Assessment & Industry Training
UML-Test Application for Automated Validation of Students’ UML Class Diagram ................................................................................................. 222
Pavel Herout and Premek Brada
Learning Effectiveness of Team Discussions in Various Software Engineering Education Courses ........................................................................... 227
Masashi Shuto, Hironori Washizaki, Katsuhiko Kakehi, Yoshiaki Fukazawa, Shoso Yamato, and Masashi Okubo
Using an Active Learning Environment to Increase Students’ Engagement ........................................................................ 232
Sergio Antônio Andrade de Freitas, Wander C. M. P. Silva, and George Marsicano
Applying an Instructional Design Process to Development of an Independent Verification and Validation Training Program ........................................ 237
Naoko Okubo, Kazuharu Nara, Shunsuke Takemura, and Yasushi Ueda
First Steps towards Exporting Education: Software Engineering Education Delivered Online to Professionals .................................................. 241
Kevin D. Wendt, Ken Reily, and Mats P. E. Heimdahl

Author Index ........................................................................................................................................ 246
