# TABLE OF CONTENTS

Towards a Model to Identify the Need and the Economic Efficiency of Digital Assistance Systems in Cyber-Physical Assembly Systems ......................................................... 1  
  P. Hold, W. Sihn  

A Middleware Architecture for Vertical Integration ................................................................. 5  
  A. Ismail, W. Kastner  

Process-Level Modeling and Simulation for HP’s Multi Jet Fusion 3D Printing Technology ................................................................. 9  
  H. Kim, Y. Zhao, L. Zhao  

Towards Model-Integrated Service-Oriented Manufacturing Execution System .......................... 13  
  S. Fallah, S. Wolny, M. Wimmer  

Towards Collective Intelligence System Architectures for Supporting Multi-Disciplinary Engineering of Cyber-Physical Production Systems ................................................................. 18  
  A. Musil, J. Musil, S. Biffl  

Supporting the Engineering of Cyber-Physical Production Systems with the AutomationML Analyzer ................................................................. 22  
  M. Sabou, F. Ekaputra, O. Kovalenko, S. Biffl  

Towards a Methodology and Instrumentation Toolset for Cloud Manufacturing ............................. 30  
  O. Skarlat, M. Borkowski, S. Schulte  

Secure Cyber-Physical Production Systems: Solid Steps Towards Realization .............................. 34  
  J. Ulbrich, A. Voyiatzis, E. Weippl  

Ontological Reasoning for Consistency in the Design of Cyber-Physical Systems ............................. 38
