International Mine Water Association Symposium 2016 (IMWA 2016)

Mining Meets Water – Conflicts and Solutions

Leipzig, Germany
11-15 July 2016

Volume 1 of 2

Editors:

Carsten Drebenstedt       Michael Paul

ISBN: 978-1-5108-2714-1
## TABLE OF CONTENTS

### VOLUME 1

- Rehabilitation of Water Resources induced by Large Scale Mining in Germany ................................................................. 4
  - K. Zachriedich, E. Scholz, F.-C. Benhaus
- Progress and Prospects of Mine Water Management in the Former East German Uranium Mining Province .................. 6
  - M. Paul
- Waste or Resource? Extraction Potential from Acid Mine Drainage for Useful Resources .................................................... 7
  - D. Nordstrom
  - M. Worsa-Kozak, M. Czep
- Latest Development in Water Management of Eastern-german lignite Industry ................................................................. 11
  - M. Strazina, T. Koch
- Simulating Mining-related Reactive Transport Processes Across Multiple Length and Time-scales ................................. 14
  - H. Prommer
- Stable Isotope Tools for Assessing Flow Dynamics and Contaminant Degradation in Mining Landscapes ..................... 15
  - K. Knoeller, M. Schubert, C. Jescске, N. Holst
- Mine Water Discharge Quality – A Review of Classification Frameworks ................................................................. 17
  - J. Opitz, W. Timms
- Pulling Together Mine Water Management Across Site & Business for Performance: Principles, Business Role & Inclusive Governance, Strategic & Practice Framework ................................................................. 27
  - T. Kennedy
- Climate Change and Mine Closure – A Practical Framework for Addressing Risk ................................................................. 35
  - A. Birtley, S. Pearce, M. O'Kane
- Cumulative Groundwater Impact of Mining in the Kalahari Manganese Field and the Need for a Strategic Environmental Assessment Approach ................................................................. 43
  - M. Zingelmann, A. Bittner, F. Winker, M. Muresan, J. Ellerton, T. Harck
- 1000 Years of Mining: What Means Geogenic Background of Metals in the Rivers of the Harz Mountains? ..................... 45
  - P. Schneider, U. Nilius, A. Lammel, A. Schmitt, A. Schmitt
- Financial Calculation of Long Term Tasks in Mine Water Management ................................................................. 54
  - C. Drebenstedt
- Recognition and External Reporting of Mine Water Treatment Costs According to IFRS Standards ................................. 63
  - J. Bongaerts
- Environmental Risk Mitigation Resulting from Implementation of Mine Water Treatment Technologies Developed Within Project Manager ................................................................. 64
  - M. Wiesner, A. Zgorska, P. Zawartka, M. Klinger
- Mine Water Issues Addressed in the Project train@mine ..................................................................................................... 72
  - F. Werner, J. Meher, U. Seeger, M. Strazina
- Waters of Deep Ground – Mine Water and Emotions ..................................................................................................... 78
  - G. Bahland, C. Wolkersdorfer
- Environmental Risk Caused by High Salinity Mine Water Discharges from Active and Closed Mines Located in the Upper Silesian Coal Basin (Poland) ......................................................... 85
  - A. Zgorska, L. Trzaski, M. Wiesner
- Kenyan-German Centre of Excellence for Mining, Environmental Engineering and Resource Management (CEMEREM) ........................................................................................................... 93
- The Waves of Change in Water Resource Management & the Rising Challenge for Water Professionals: Calling Time for a Water Resource Classification & Reporting Code (WRCRC) ........................................................................................................... 99
  - T. Kennedy
- Earthquakes and Groundwater and Surface Water Management at Mines Sites ................................................................. 102
  - G. Touche
- Mechanisms on Mine Water Loss Based on a Theory of Mining-Fractures Development Pattern .................................... 108
  - D. Xu, S. Peng, S. Xiang, Y. He, L. Xu
- Can natural Stratification Prevent Pollution by Acid Mine Drainage? .................................................................................... 115
  - C. Wolkersdorfer, L. Shongwe, C. Schmidt
- The Progress of the Mine Water Prevention and Control on Basic Principles in China ................................................................. 122
  - Q. Wu, S. Liu, Y. Zeng
- Stable Isotope Techniques as a Tool in Hydrogeological Conceptualisation of Ayazmant Mine Site (NW Turkey) ............. 127
  - M. Ekmecki, S. Ackel, U. Sumer
- Investigations in a Closed Mining Area in China – Challenges of Limited Datasets and Understanding of Hydraulic Behaviour ........................................................................................................... 135
  - L. Pu, N. Hoth, C. Freese, C. Drebenstedt
- Integrated Mine Water Management: Innovative Design to Address Challenging Environments ......................................... 141
  - M. Goode, E. Hayes
- How Does Salinisation of Running Waters Affect Aquatic Communities? Answers from A Case Study ............................. 144
  - C.-J. Schalz
Aspects of the Environmental Monitoring on the Territory of Verhneokamskoye Potash Deposit (Russia) .................................................................378
E. Kharyulin

Geophysical Electromagnetic Measurements for Mine Site Groundwater Monitoring ..........................................................383
P. Saksu, J. Soras

AMD Formation and Dispersion of Inorganic Pollutants Along the Main Stream in a Mining Area ...............................................................386
E. Fosso-Kankeu, A. Manyatshe, A. Manyai, F. Waanders

Persistent Secondary Contaminant Sources at a Former Uranium Mill Site, Riverton, Wyoming, USA ..............................................................393
R. Johnson, W. Dam, S. Campbell, F. Noel, S. Bone, J. Barger, J. Dayvault

Waste Rock Characterisation Versus the Actual Seepage Water Quality ..............................................................................................400
T. Karlsson, P. Kauppiela

Mine Water Approach Using Tracers in South African Abandoned Coal Mines ..................................................................................405
T. Kgori, Y. Wyk, H. Coetzee, M. Dippenaar

Modeling Cyanide Degradation in South African Abandoned Coal Mines: From Laboratory to Reality ......................................................412
J. Declercq, D. Tautile, R. Bowell

The Effects of a Plug of Alkaline Water in an Acid Stressed Watershed .............................................................................................420
N. Kruse, A. Mackey

Assessment of the Influence of Coal Mining on Groundwater Quality: Case of Masisi Village in the Limpopo Province of South Africa ..................................................................................................................425
A. Nephala, C. Muzerengi

Contamination Load in a River Affected by AMD Discharges: Odiel River (Huelva, Spain) .................................................................434
J. Rivera, M. Olias, C. Ruiz-Canovas, F. Macias, L. Galvan

Reiche Zeche Mine Water Geochemistry ........................................................................................................438
T. Zdzieniwc, J. Brune, M. Hirsch, J. Weyer, A. Simon, L. Lipton

Magnesium and Aluminum Sulfates in Salt Efflorescences from Acid Mine Drainage in the Iberian Pyrite Belt (SW Spain) .........................................................440
T. Valette, J. Gande, M. Torrel

Characteristic Variation of Precipitate in Limestone Layer .........................................................................................446
D.-K. Lee, Y.-W. Cheong

Optimized Dewatering Wells for Open Pit Mining to Prevent Well Loss from Ochre Formation ..........................................................449
T. Reute, M. Reich

Deploying Oil & Gas Drilling Techniques with Dewatering Well Placement Technology (DWPT) in Open Pit and Underground Mines ..............................................................................................................450
M. Boland, A. Rowland, M. Bester, C. Cintolesi, J. Dowling

Ghaghoo Mine Dewatering and Injection of Excess Water .................................................................................................458
A. Johnstone, D. Kriel, D. Vermeulen

Cut-off Wall Technologies in Mining ................................................................................................................463
S. Schwanke

Wellness Skin in Mine Dewatering and Drinking Water Supply: Field Observation, Mineralogy and Hydraulic Effect ......................................................................................................................473
C. Weidner, G. Houben, M. Halisch, S. Knaufhold, J. Sander, M. Reich, C. Menz

Progressive Sinkhole Occurrence Induced By Dewatering Activities in a Large Lignite Mine (SE Turkey) ..........................................................481
M. Ekmekci, H. Yazicioglu

Hydrogeological Exploration and Field Tests on Vacuum Wells in Overburden Sediments for Determination and Modelling of Process Parameters and Dewatering Construction .........................................................489
B. Heinrich, M. Struzina, S. Knapke, S. Pettena

Dewatering Challenges in an Large Scale Production Hard Rock Open Pit in Northern Sweden .................................................................498
D. Hagedorn, N. Hoth, H. Mwagadui

The Significance of Ground Water Flow Modelling Study for Simulation of Open Cast Mine Dewatering and Assessing the Environmental Impact of Drainage ..............................................................................503
J. Szczepinski

S. Pearce, B. Polchuk, R. Sharniak, J. Song, D. Christensen

Modelling Approach to Predict Peak Inflows at the Argyle Block Cave Mine, Western Australia ........................................................................515
G. Beale, T. Saafullah, D. Saepullah, S. Daley

Mine Water Balances – A New Proposed Approach ........................................................................................................523
S. Swanson, L. Breckenridge, M. Leduc

Strategies to Avoid AMD in Active Lignite Mining ................................................................................................................530
P. Simon, N. Hoth, C. Drehenstede, P. Jokar

Mine Closure Wiki – Databank for Mine Closure ................................................................................................................533

Surface Water Management and Encapsulation of Mine Waste to Reduce Water Pollution from Frongoch Mine, Mid Wales ........................................................................................................541
P. Edwards, T. Williams, P. Stanley

Environmental Remediation of Abandoned Mines in Portugal – Balance of 15 Years of Activity and New Perspectives ..................................................................................................................549
E. Carvalho, C. Diamantino, R. Pinto
Surface Water Monitoring in a Mining Impacted Drainage Basin with Particular Reference to Bio-monitoring of Protected Species ................................................................. 557

Innovative Monitoring Measures in the Phase of Post-mining ............................................................................ 565

Implementation of the Rehabilitation Operational Strategy for the flooded Opencast Mine Tamnava-West Field ............ 573

Bio-physical Closure Criteria Without Reference Sites: Realistic Targets in Modified Rivers .................................. 581

Low Carbon After-Life – Overview and First Results of Project LoCAL ............................................................... 588

Risk-based Regional Scale Screening of Groundwater Contamination from Abandoned Mining Sites in Serbia - Initial Results ........................................................................................................ 595

United Nations Development Programme (UNDP); Detailed Technical Design for Acid Mine Water Treatment in Novo Brdo Mine, Artana / Kosovo .................................................. 603

Detection of Iron-rich Groundwater “Hot Spots” Entering Streams in Lusatia ........................................................... 611

Water Drainage in the German Coal Mining After the Close-down in 2018 ............................................................... 619

Management of Water Levels in the Flooded Mines of the Witwatersrand, South Africa ..................................... 625

Experience of Mine Water Quality Evolution at Abandoned Uranium Mines in Germany and the Czech Republic .................. 631

Pycnocline Dynamics in an Abandoned and Flooded MineStyle Template – How to Write a 6 Page Full Paper for IMWA2016 ........................................................................................................................................ 632

Water Management Issues in an Abandoned Coal Mine District (Torre Del Bierzo, Spain) .................................... 637

Comparing Acid and Metal Loading Before and After Stream Capturing Subsidence Closure .................................. 639

Column Testing and 1D Reactive Transport Modeling To Evaluate Uranium Plume Persistence Processes .............. 647

A 3D Numerical Model to Assess the Performance of the Reclamation Measures for an Abandoned Mine Site ........ 655

Long-Term Remediation of Acid Mine Drainage from Abandoned Coal Mine Using Integrated (Anaerobic and Aerobic) Passive Treatment System, in South Africa: A Pilot Study ..................................................... 663

Impact of Fertilizer Effluent Disposed in Dolerite Quarries on the Groundwater Quality ........................................ 671

Investigation of the Effects of Groundwater Resurgence and Subsequent Exfiltration of Ferrous Groundwater from the Dump Site of the Witznitz Former Lignite Mine Into the Pleisse and Wyhra Rivers ................................................................. 679

VOLUME 2

Geochemical and Microbial Conditions of a Lignite Coal Spoil and Overburden Area in Middle Germany and Environmental Impact Decades After Remediation .............................................................................. 688

Municipal Sludge Ash for Abatement of ARD ........................................................................................................... 694

Green Liquor Dregs in Mine Waste Remediation, from Laboratory Investigations to Field Application .................. 701

Geochemical Evaluation of Cemented Paste Tailings in a Flooded Underground Mine ........................................... 709

Preliminary Results from Experiments with Cement Slurries to Control Acid Mine Drainage in Waste Rocks from Brukunga Mine in South Australia ........................................................................................................ 720

Trace Substances in Ascending Mine Waters – Environmental and Social Effects in Urban Areas .............................. 727

Assessing Post-mining Risks in the Long Term: Ten Years of Hydrological Monitoring in Liège (Belgium) .............. 731

Restoration, Governance and Regional Development in the South of Leipzig .......................................................... 735

Water Resources Monitoring and Mine Water Control in Portuguese Old Uranium Mines ...................................... 740
Derivation of Natural Background Values for Groundwater in Conjunction with the Remediation of a Sandstone-hosted Uranium Mine ............................................................ 748

A Conceptual Surface Model for Rehabilitation of Nyala Mine Terrain and Improvement of the Pit Lake Safety Status ........................................................................................................... 754

S. Mhlongo, F. Aponsah-Dacosta

The Kizel Coal Basin (The Western Urals, Russia): Environmental problems and Solutions .......................................................................................................................... 761

E. Khayralina, V. Khmurchik, N. Makstimovich

Reduction of Seepage Outflow from Potash Tailings Piles by Improvement of Greening: Results of a Hydrological Simulation ................................................................. 767

C. Hildmann, L. Rosel, B. Zimmermann, D. Knoche, W.-D. Hartung, F. Benthaus

Results of Field Scale Phytoremediation Experiments on a Former Uranium Mining Site ................................................................. 775

S. Wiltzsch, L. Jablonski, D. Miraqorodski, D. Olivier, D. Merten, J. Wittig, G. Buchel

Developing Sustainable Biotechnologies for Mine Water Treatment in the 21st Century ........................................................................................................... 777

B. Johnson, A. Santos, C. Falagana, R. Jones, B. Grail, R. Holanda, S. Hedrich

Passive Biochemical Treatment of Ferriferous Mine Drainage: Lorraine Mine Site, Northern Quebec, Canada ................................................................. 785

T. Gentry, B. Rassier, M. Paradise, C. Neculita

Microbial Communities in Passive Remediation Systems at Three Abandoned Coal Mine Sites in the United Kingdom ................................................................................. 791

C. Falagana, I. Smail, B. Grail, D. Johnson

Performance Review of an Operational Reducing Alkalinity Producing System (RAPS) Treating Coal Mine Waters at Tan-y-Garn, Wales .......................................................... 799

A. Small, P. Thorn

Baffle Curtain Installation to Enhance Treatment Efficiency for Operational Coal Mine Water Treatment Schemes ................................................................. 807

S. Chamberlain, A. Moorhouse

Passive Water Purification of Pit Lakes – A Case Study from the Closed Hammalsahti Cu-Zn-Au Mine ................................................................. 815

M. Raisanen, M. Bomberg, J. Mäkinen

Field Trial of an Ion Exchange Based Metal Removal Technology in the Treatment of Mine Waters ........................................................................................................ 823

P. Upreti, G. Tangtse, K. Huddersman, I. Small

Extreme Recovery Membrane Process and Zero Liquid Discharge Low Temperature Crystallization for Treating Scaling Mine Waters ....................................................................... 831

M. Man, X. Yin, Z. Zhou, B. Sparrow, S. Lee, M. Frank

The Complicated Role of CO2 in Mine Water Treatment ................................................................................................................................. 839

R. Hedin, B. Hedin

Performance of Synthesized Hybrid Hydrogel Nanocomposite Applied for the Removal of Metal Ions from Aqueous Solutions ............................................................................................. 845

A. Kassahun, J. Laubrich, M. Paul

Feasibility Study on Seepage Water Treatment at a Uranium TMF Site by Ion Exchange and Ferric Hydroxide Adsorption ........................................................................................................ 853

A. Kassahun, J. Laubrich, M. Paul

Research and Development of Waste Waters Vibroacoustic Purification Methods for Mining Enterprises ............................................................................................. 854

C. Drebベンテッド, Y. Agefonov, G. Fedorov

Sorption of Arsenate on Ettringite Formed in Sulphate Removal from Mine Drainage Water ........................................................................................................ 862

M. T. Funetti, T. Luukkanen, T. Leppänen, J. Rama, U. Lassi

Iron and Arsenic Removal Rates in a Continuous Flow Reactor Treating As-rich Acid Mine Drainage (AMD) ........................................................................................................ 869

Passive Treatment of Radioactive Mine Water in Urgeiriça Uranium Mine, Portugal ................................................................................................................................. 876

R. PINTO, Z. OLIVEIRA, C. DIAMANTINO, E. CARVALHO

Treatment of Seepage Water from a Tailings Pond of Uranium Mining: Column Tests with a Novel Schwertmannite Adsorbent ............................................................................................. 884

D. Burghardt, J. Richter, E. Simon, S. Réichel, E. Jannack, J. Laubrich

Advanced Chemical Oxidation for Arsenic Treatment at a Flooded Uranium Mine with a Bio-geochemically Reduced Mine Water Pool .......................................................................... 889

M. Paul, A. Kassahun, K. Sommer, J. Meyer, L. Braun

Cadmium Removal from Real Mine Water by Electrocoagulation ................................................................................................................................. 897

E. Nariyan, M. Sillanpaa, C. Wolkersdorfer

Manganese Removal from New Zealand Coal Mine Drainage Using Limestone Leaching Beds ........................................................................................................ 901

Development of a Low-tech Treatment for Neutral Mine Water – A Case Study ................................................................................................................................. 908

L. Sartz, M. Backström

Nitrate Reduction in Real Mine Water Using Zero-valent Iron (ZVI) and Iron Waste ................................................................................................................ 914

D. Lopes, M. Sillanpaa, C. Wolkersdorfer

FAMDT - A New Approach for Flexible AMD Treatment ................................................................................................................................. 920

M. Gest, H.-J. Kuchen, V. Zaurack

Use of Alkaline Mine Waste As Treatment for Acid Drainage ................................................................................................................................. 926

A. Gomez-Arias, J. Castillo, E. Heerden, D. Vermeulen
A Compact Passive Treatment Process for AMD Using Rice Husk and Rice Bran ................................................................. 932

Microbial Iron Retention in the Groundwater Upstream to a River ...................................................................................... 939
C. Hildmann, R. Schopke, M. Walko, K. Mazur

Sulfate Reducing Bioreactor Longevity Estimates based on Substrate Characterization and Initial Carbon Release .................. 947
L. Figueroa, L. Landkammer, D. Drennan, J. Sharp, I. Lee

Development of a Pilot-Scale Semi-Passive System for the Bioremediation of ARD ................................................................. 952
R. Hille, N. Moort, T. Marais, N. Naidoo, G. Moss, S. Harrison, R. Mulhauers

On Site Feasibility Study on Biotechnical Sulphate Reduction ............................................................................................... 960
A. Gerth, A. Hebner, F.-C. Benthaus

Characteristics and Treatment of Mine Water from Three Historical Coal Workings in Yorkshire, UK: Interrelationships Between Rates in Geochemical, Environmental and Operational Processes .......................................................... 965
R. Perry, A. Dudaney, B. Chan

Characterisation of Fly Ashes for Minimisation of Acid Mine Drainage from Coal Mining Waste Rocks ........................................ 972
A. Qureshi, Y. Jia, C. Maurice, B. Ohlander

The Use of Limestone as a Strategy to Remove Sulphate from Mine Waters with Sulfate Concentrations Below the Limit Defined by Gypsum Solubility .................................................................................................................. 982
A. Silva, V. Leão

Reduction of Salinity and Hardness of Water Using Copolymerized Biopolymers ................................................................. 989
E. Fosso-Kanfou, F. Waanders, E. Maloy, B. Steyn

Removal of Iron and Suspended Solids in Mine Water Treated by Vertical Flow Reactor ............................................................. 997

Removal of Oxanoions From Water: Comparison of a Novel Schwertmannite Adsorbent and an Iron Hydroxide Adsorbent .................................................................................................................. 999
E. Simon, D. Burghardt, J. Richter, S. Reiche, E. Jannek

Application of Biomass Ashes for Treatment of Acid Mine Drainage .................................................................................... 1003
A. Bogush, C. Dabu, F. Titkova, L. Campos, J. Stegemann, G. Anoshkin

Treatment of Chromate(VI) and Vanadate(V) Polluted Wastewaters Using Schwertmannite Adsorbents ................................. 1007
M. Klug, E. Jannek, S. Reiche, S. Peiffer

Microbial Community Dynamics During the Biochemical Treatment of Acid Mine Drainage Under Three Different Hydraulic Retention Times .................................................................................................................. 1011
Y. Vasquez, M. Escobar, C. Neculita, Z. Arbeli, F. Roldan

Comparative Genomic Analysis of Acidophilic Iron Oxidizing Bacteria from a Pilot Plant for the Microbial Remediation of AMD Water: Insights into Strategies for Speciation and Metabolic Adaptation to Life at Low pH and under Low Nutrient Concentration .................................................................................................................. 1017

Mineralogical Changes within Polish Weissliegend Sandstones During Bioleaching ................................................................. 1022
J. Heim, K. Bachmann, A. Rahfeld, R. Mockel, S. Schopf, J. Gutzmer, M. Schlomann

Microbiology and Chemistry Interactions in a Biological Sulphate-Reducing Process ............................................................. 1029
M. Arnold, J. Makinen, M. Salo, M. Bomberg

Sulfur Cycling in an Oil Sands Tailings Pond ......................................................................................................................... 1037
S. Stasiak, K. Wenda-Portoff

Characterising Environmental Risks Associated with Sulfide-bearing Gold Wastes ............................................................ 1045
A. Opitz, M. Becker, S. Harrison, J. Broadhurst

Bioleaching of Indium-bearing Sphalerite Under Underground Mining Temperatures .............................................................. 1053
N. Eisen, M. Schloemann, S. Schopf

Acid Mine Water Treatment Using Novel Acidophilic Iron-Oxidizing Bacteria of the Genus “Ferrovum”: Effect of Oxygen and Carbon Dioxide on Survival ................................................................. 1055
R. Jwaar, J. Tischler, E. Jannek, M. Schloemann

Environmental Parameters As Drivers of Bacterial Communities Responsible for Arsenic Removal from Acid Mine Drainage ......................................................................................................................... 1059
Y. Tardy, C. Casiot, L. Fernandez-Rojo, E. Resonges, A. Desoevre, M. Iery

Coupled Hydromechanical Model For Assessing Land Subsidence Due To Salt Layers Dissolution ........................................... 1062
S. Gourdier, C. Vong, B. Bazargan-Sabet

Graphical Methods for Judging Sources of Roof Water Inrush – A Case Study, China ........................................................... 1069
C. Wang

Mine Water Outbreak and Stability Risks: Examples and Challenges from England and Wales .................................................. 1073
W. Mayes, A. Jarvis

Integrated Slope Stability and Dewatering Evaluation: Optimizing Slopes to Optimize Value .................................................. 1079
L. Brekenridge, B. Fisher, M. Leduc

Risk Assessment of Coal Mining under Sand Aquifers .................................................................................................................. 1087
W. Sun, B. Yang

Monitoring and numerical simulation of water inrush pathway caused by coal mining above karstic confined aquifer with high water pressure .................................................................................................................. 1094
Y. Sun, Z. Xu

Use of Tensiometers to Determine the Moisture Characterization Point in Ores ......................................................................... 1099
A. Wijdeveld, T. Evens, J. Pennekamp

Geogenic Caverns in Rock Salt Formations – A Key to Genetic Processes and Hazard Potential .................................................. 1107
S. Hontzsch, S. Zeibig
