
Austin, Texas, USA
27-30 September 2015
Table of Contents

Proving Hybrid Systems .......................................................... 1
   André Platzer
Formal Verification of Arithmetic Datapaths using Algebraic Geometry and Symbolic Computation ................. 2
   Priyank Kalla
Reactive Synthesis ............................................................... 3
   Roderick Bloem
Abductive Inference and Its Applications in Program Analysis, Verification, and Synthesis .......................... 4
   Işıl Dillig
Democratization of Formal Verification with Collective Intelligence ...................................................... 5
   Ziyad Hanna
Detecting Hardware Trojans: A Tale of Two Techniques ................................................................. 6
   Sharad Malik
The Genesis and Development of Model Checking: Fact vs. Fiction ...................................................... 7
   Allen Emerson
The FMCA 2015 Graduate Student Forum .......................................................................................... 8
   Georg Weissenbacher
Verification of Cache Coherence Protocols wrt. Trace Filters ............................................................. 9
   Parosh Aziz Abdulla, Mohamed Faouzi Atig, Zeinab Ganjeh, Ahmed Rezine and Yunyun Zhu
Compositional Reasoning Gotchas in Practice ............................................................................. 17
   Chirag Agarwal, Paul Hylander, Yogesh Mahajan, Jonathan Michelson and Vigyan Singhal
Universal Boolean Functional Vectors .......................................................................................... 25
   Jesse Bingham
Compositional Safety Verification with Max-SMT ............................................................................. 33
   Marc Brockschmidt, Daniel Larraz, Albert Oliveras, Enric Rodríguez Carbonell and Albert Rubio
Formal Verification of Automatic Circuit Transformations for Fault-Tolerance .......................................... 41
   Dmitry Burlyaev and Pascal Fradet
An SMT-based Approach to Fair Termination Analysis ...................................................................... 49
   Javier Esparza and Philipp J. Meyer
Compositional Recurrence Analysis ............................................................................................. 57
   Azadeh Farzan and Zachary Kincaid
Pushing to the Top ........................................................................ 65
   Arie Gurfinkel and Alexander Ivrii
Skolem Functions for Factored Formulas .................................................................................... 73
   Ajith John, Shetal Shah, Supratik Chakraborty, Ashutosh Trivedi and S. Akshay
Theory-Aided Model Checking of Concurrent Transition Systems .................................................. 81
   Guy Katz, Clark Barrett and David Harel
Compositional Verification of Procedural Programs using Horn Clauses over Integers and Arrays ........... 89
   Anvesh Komuravelli, Nikolaj Bjørner, Arie Gurfinkel and Kenneth McMillan
IC3 Software Model Checking on Control Flow Automata .................................................................. 97
   Tim Lange, Martin R. Neuhäusler and Thomas Noll
Accelerating Invariant Generation ............................................................................................. 105
   Kumar Madhukar, Björn Wachtler, Daniel Kroening, Matt Lewis and Mandayam Srivas
Comparing Different Functional Allocations in Automated Air Traffic Control Design
Cristian Mattarei, Alessandro Cimatti, Marco Gario, Stefano Tonetta and Kristin Y. Rozier

Pattern-based Synthesis of Synchronization for the C++ Memory Model
Yuri Meshman, Noam Rinetzky and Eran Yahav

Better Lemmas with Lambda Extraction
Mathias Preiner, Aina Niemetz and Armin Biere

CAQE: A Certifying QBF Solver
Markus N. Rabe and Leander Tentrup

Difference Constraints: An adequate Abstraction for Complexity Analysis of Imperative Programs
Moritz Sinn, Florian Zuleger and Helmut Veith

Reverse Engineering with Simulation Graphs
Mathias Soeken, Baruch Sterin, Rolf Drechsler and Robert Brayton

Template-based Synthesis of Instruction-Level Abstractions for SoC Verification
Pramod Subramanyan, Yakir Vizel, Sayak Ray and Sharad Malik

Transaction Flows and Executable Models: Formalization and Analysis of Message passing Protocols
Murali Talupur, Sandip Ray and John Erickson
