2016 IEEE 29th International Symposium on Computer-Based Medical Systems (CBMS 2016)

Belfast and Dublin, Ireland
20-24 June 2016
Preface..........................................................................................................................................................xiii
Organization..................................................................................................................................................xv

Parallel Sessions 1A

Data Analysis and Knowledge Discovery 1 — Tumors

A Speech-to-Text Interface for MammoClass ......................................................................................................1
  Ricardo Sousa Rocha, Pedro Ferreira, Inês Dutra, Ricardo Correia,
  Rogerio Salvini, and Elizabeth Burnside

Predicting Respiratory Motion for Real-Time Tumour Tracking in Radiotherapy ........................................7
  Tomas Krilavičius, Indre Žliobaitė, Henrikas Simonavičius,
  and Laimonas Jaruševičius

Digital PI-RADS: Smartphone Sketches for Instant Knowledge Acquisition in Prostate Cancer Detection ...........................................13
  Alexander Prange and Daniel Sonntag

Predicting Advanced Prostate Cancer Endpoints from Early Indications via Transductive Semi-Supervised Regression .........................................19
  Faisal M. Khan and Casimir A. Kulikowski

Clinical and Healthcare Services Research 1

Mutations and Drugs Portal (MDP): A Database Linking Drug Response Data and Genomic Information .................................24
  Jimmy Caroli, Cristian Taccioli, Giovanni Sorrentino, Giannino Del Sal,
  and Silvio Bicciato
Quality Evaluation of Poison Control Information Systems: A Case Study of the DATATOX System ...........................................................................................................................................................................30
  João M. Alves, Danielle B. L. Albino, Marisete C. Resener, Marlene Zannin, Alexandre Savaris, Christiane G. von Wangenheim, and Aldo von Wangenheim

Ensemble-Based Methodology for the Prediction of Drug-Target Interactions ..........................................................36
  Edgar D. Coelho, Joel P. Arrais, and José Luís Oliveira

Predictive Risk Modelling for Integrated Care: A Structured Review .................................................................42
  Mohsen Mesgarpour, Thierry Chaussalet, Philip Worrall, and Salma Chahed

Parallel Sessions 1B

Data Analysis Knowledge Discovery 2 — Disease Monitoring

A Gait Analysis Approach to Track Parkinson’s Disease Evolution Using Principal Component Analysis .......................................................................................................................................................48
  Leonardo Medeiros, Hyggo Almeida, Leandro Dias, Mirko Perkusich, and Robert Fischer

Learning Pressure Patterns for Patients with Diabetic Foot Syndrome ..............................................................................54
  Uli Niemann, Myra Spiliopoulou, Fred Samland, Thorsten Szczepanski, Jens Grützner, Antao Ming, Juliane Kellersmann, Jan Malanowski, Silke Klose, and Peter R. Mertens

A Self-Adaptively Evolutionary Screening Approach for Sepsis Patient .............................................................................60
  Yu Jiang, Pengliu Tan, Houbing Song, Binhua Wan, Mohammad Hosseini, and Lui Sha

Understanding Patients’ Needs in Diabetes for Mobile Health — A Case Study .................................................................66
  Miyeon Jung, Sung-Min Park, Yeonji Ryu, Geusan Lim, and Jaeyoon Song

Using Wearables in the Context of Chronic Disorders: Results of a Pre-Study ........................................................................68
  Marc Schickler, Rüdiger Pryss, Manfred Reichert, Martin Heinzelmann, Johannes Schobel, Berthold Langguth, Thomas Probst, and Winfried Schlee

Clinical Healthcare Services Research 2 — Hospital Resource Management

The Use of a Digital Structured Format for Nursing Shift Handover to Improve Communication ...........................................................................................................................................................................70
  Molly Vinu and Bridget Kane

Software Quality Evaluation of the Laboratory Information System Used in the Santa Catarina State Integrated Telemedicine and Telehealth System ...........................................................................76
  João M. Alves, Alexandre Savaris, Christiane G. von Wangenheim, and Aldo von Wangenheim
“Schedule Change Really Disrupts a Lot of Things!": Never-Ending Physician Scheduling in a Multi-function Multi-setting Practice .................................................................82
Charlotte Tang, Hannah Freedman, and Robert Sierminski

Resource Frequency Prediction in Healthcare: Machine Learning Approach .................................................................88
Daniel Vieira and Jaakko Hollmén

Parallel Sessions 2A

Decision Support and Recommendation Systems 2

Development of Minimum Dataset (MDS) for Postnatal Discharge Summaries (PDS) ..........................................................................................................................................................94
Alphonsa Pius and Bridget Kane

An Organ-Centric Best Practice Assist System for Acute Care ..................................................................................100
Maryam Rahmaniheris, PoLiang Wu, Lui Sha, and Richard R. Berlin

Mental Workload in Medicine: Foundations, Applications, Open Problems, Challenges and Future Perspectives ........................................................................................................106
Luca Longo

Aligning Interdisciplinary Healthcare Team Behavior with Workflow Execution: An Example of a Radical Prostatectomy Workflow ...................................................................................112
Szymon Wilk, Dymna O’Sullivan, Mounira Kezadri-Hamiaz, Craig Kuziemsky, Daniela Rosu, Wojtek Michalowski, and Michael Fung-Kee-Fung

Biomedical Signal and Image Processing and Machine Vision

On Using Active Contour to Segment HEP-2 Cells ........................................................................................................118
Mario Merone and Paolo Soda

An Effective Non-rigid Image Registration Method Based on Active Demons Algorithm ...................................................................................................................................................124
Zhencho Tang, Peng Xue, Pei Yang, Dayu Jia, and Enqing Dong

Automatic Neuron Tracing Using a Locally Tunable Approach ..........................................................................................130
Ludovica Acciai, Paolo Soda, and Giulio Iannello

Towards a Biomedical Virtual Research Environment ......................................................................................................136
Richard McClatchey, Jetendra Shamdasani, Andrew Branson, Kamran Munir, and Zsolt Kovacs

Introducing Low-Cost Stereo Imaging for Cutaneous Wound Assessment ........................................................................138
Ekaterina Sirazidinova and Thomas M. Deserno
Parallel Sessions 3A

Decision Support and Recommendation Systems 1

Usability Evaluation of Published Clinical Guidelines on the Web: A Case Study ..........................................................................................................................................................140

Soudabeh Khodambashi and Øystein Nytrø

Utility of Electronic International Register of Clinical Prediction Rules Relevant to Primary Care ...............................................................................................................................................146

Atieh Zarabzadeh, Ronan McDonnell, Stefan Paz Berrios, John Dempsey, Emma Harrington, Susan M. Smith, and Tom Fahey

Modality Classification for Searching Figures in Biomedical Literature .................................................................................................................................152

Zhiyun Xue, Md. Mahmudur Rahman, Sameer Antani, L. Rodney Long, Dina Demner-Fushman, and George R. Thoma

Big Data Analytics for Resilience Assessment and Development in Tactical Training Serious Games ...........................................................................................................................................158

Carolyn McGregor and Brendan Bonnis

Clinical and Healthcare Services Research 3 — Frameworks and Workflows in Telemedicine

Eduardo Beckhauser, Vinicius A. Petrolini, Alexandre Savaris, João M. Alves, and Aldo von Wangenhein

An eHealth Context Management and Distribution Approach in AAL Environments .................................................................................................................................169

Madalena Pereira da Silva, Débora Cabral Nazário, M. A. R. Dantas, Alexandre Leopoldo Gonçalves, A. R. Pinto, Guilherme Manerichi, and Bruno Vanelli

A Quality Model for AAL Software Systems .................................................................................................................................................................175

Lina Garcés, Flavio Oquendo, and Elisa Yumi Nakagawa

Towards Flexible Mobile Data Collection in Healthcare ...........................................................................................................................................181

Johannes Schobel, Rüdiger Pryss, Marc Schickler, and Manfred Reichert

Implementation of Smartphone Based Blood Flow Diagnoses from Doppler Spectrogram .............................................................................................................................................183

Biswabandhu Jana and Swapna Banerjee
Data Analysis and Knowledge Discovery 3 — Disease Detection and Characterization

GPU-Accelerated Real-Time Gastrointestinal Diseases Detection .................................................. 185

Konstantin Pogorelov, Michael Riegler, Pål Halvorsen, Peter Thelin Schmidt, Carsten Griwodz, Dag Johansen, Sigrun Losada Eskeland, and Thomas de Lange

Variability Issues in Automated Hippocampal Segmentation: A Study on Out-of-the-Box Software and Multi-rater Ground Truth ................................................................. 191

M. Liedlgruber, K. Butz, Y. Höller, G. Kuchukhidze, A. Taylor, O. Tomasi, E. Trinka, and A. Uhl

Early Experiences in Using Blood Cells Biomembranes as Markers for Diabetes Diagnosis ................................................................. 197

Ermanno Cordelli, Giovambattista Pani, Dario Pitocco, Giuseppe Maulucci, and Paolo Soda

Can More High-Risk Cardiovascular Patients be Identified Using Novel Biomarkers? Extending the msm Package to Measure Reclassification .................................................. 203

Felicity Lamrock, Karen Cairns, Annette Conrads-Frank, Frank Kee, Veikko Salomaa, and Uwe Siebertz

Identifying Factors for the Effectiveness of Treatment of Heart Failure: A Registry Study ................................................................. 205

Lars Aker, Henrik Boström, Panagiotis Papapetrou, and Hans Persson

Parallel Sessions 3C

Data Analysis and Knowledge Discovery 4 — Supervised with Unsupervised Learning

Identifying Relevant Features for a Multi-fatorial Disorder with Constraint-Based Subspace Clustering ................................................................. 207

Tommy Hielscher, Myra Spiliopoulou, Henry Völzke, and Jens-Peter Kühn

Simultaneous Modelling and Clustering of Visual Field Data ................................................................. 213

Mohd Zairul Mazwan Bin Jilani, Allan Tucker, and Stephen Swift

Risk Modelling Framework for Emergency Hospital Readmission, Using Hospital Episode Statistics Inpatient Data ................................................................. 219

Mohsen Mesgarpour, Thierry Chaussalet, and Salma Chahed

Combining Unsupervised and Supervised Learning for Discovering Disease Subclasses ................................................................. 225

Pietro Bosoni, Allan Tucker, Riccardo Bellazzi, Svetlana I. Nihtyanova, and Christopher P. Denton

Proposing the Deep Dynamic Bayesian Network as a Future Computer Based Medical System ................................................................. 227

Caoimhe M. Carbery, Adele H. Marshall, and Roger Woods
Human Computer Interaction in Healthcare 1

Application of Natural User Interface Devices for Touch-Free Control of Radiological Images During Surgery ...............................................................................................................................229
    Nikola Nestorov, Peter Hughes, Nuala Healy, Niall Sheehy, and Neil O’Hare

Encoding Visual Attention Features for Effective Biomedical Images Retrieval ...........................................................................................................................................................................235
    Glauco Vitor Pedrosa and Agma J. M. Traina

Caching and Prefetching Images in a Web-Based DICOM Viewer .................................................................................................................................................................................................241
    Eriksson Monteiro, Carlos Costa, José Luís Oliveira, David Campos, and Luís Bastião Silva

A Web-Based Tool for Semi-Automated Segmentation of Histopathological Images Using Nonlinear Color Classifiers ................................................................................................................................247
    Marcelo Dornbusch Lopes, Antonio C. Sobieranski, Aldo von Wangenheim, and Eros Comunello

Parallel Sessions 4A

Data Analysis and Knowledge Discovery 5 — Classification and Prediction

Colonic Polyp Classification with Convolutional Neural Networks .............................................................................................................................................................................................................253
    Eduardo Ribeiro, Andreas Uhl, and Michael Häfner

A Discrete Conditional Phase-Type Model Utilising a Survival Tree for the Identification of Elderly Patient Cohorts and Their Subsequent Prediction of Length of Stay in Hospital .........................................................................................................................................................259
    Andrew S. Gordon, Adele H. Marshall, and Mariangela Zenga

Disabling and Reoperation in Patients with Crohn’s Disease Subject to Early Surgery or Immunosuppression: A Bayesian Network Prognostic Model .......................................................................................................................................................................................265
    Cláudia Camila Dias, Fernando Magro, and Pedro Pereira Rodrigues

The AGIS Metric and Time of Test: A Replication Study ......................................................................................................................................................................................................................269
    Steve Counsell, Stephen Swift, and Allan Tucker

Modelling the Time Taken to Experience a Type 2 Diabetes Related Complication Using a Survival Tree in Order to Advise General Practitioners ..................................................................................................................................................................................271
    Christopher J. Steele, Adele H. Marshall, Anne Kouvonen, Frank Kee, and Reijo Sund
Human Computer Interaction in Healthcare 2
Application of Horizontal Visibility Graph as a Robust Measure of Neurophysiological Signals Synchrony .................................................................273
Negar Ahmadi and Mykola Pechenizkiy
Towards Determining Force Feedback Parameters for Realistic Representation of Nodules in a Breast Palpation Simulator ..................................................279
Mateus de Lara Ribeiro, Fátima L. S. Nunes, and Simone Elias
Non-rigid Fine Adjustment of Retina Maps Acquired Using a Slit-Lamp ........................................285
Rodrigo Linhares, Rogério Richa, Ricardo de Moraes, Antônio Sobieranski, and Aldo von Wangenheim
Visualization of Statistics from MEDLINE® ...........................................................................290
Jongwoo Kim, Paul LoBuglio, and George R. Thoma
An LED-Based Tunable Illumination for Diverse Medical Applications ........................................292
Piotr Bartczak, Ana Gebejes, Pauli Fält, and Markku Hauta-Kasari

Clinical and Healthcare Services Research 4
Open-Source Based Integration Solution for Hospitals .............................................................294
Raphael Oliveira, Duarte Ferreira, Ricardo Ferreira, and Ricardo Cruz-Correia
A User Behavior-Based Approach to Detect the Insider Threat in Distributed Diagnostic Imaging Systems .........................................................................................300
Hassan Sharghi and Kamran Sartipi
The Impact of Application System Messages on the Usability of Healthcare Software Applications ................................................................................................................306
Stephen Jones, Ann Keane, Artur StawiarSKI, Remi Fatus, and Bridget Kane
Domain-Specific Video Compression for Long-Term Archiving of Endoscopic Surgery Videos .............................................................................................................312
Bernd Münzer, Klaus Schoeffmann, and Laszlo Böszörmenyi

Parallel Sessions 4B
Clinical and Healthcare Services Research 5 — Activity Recognition and Tele-assistance
Using Genetic Algorithms for Optimal Change Point Detection in Activity Monitoring .................................................................................................................318
Naveed Khan, Sally McClean, Shuai Zhang, and Chris Nugent
Out-of-Home Activity Recognition from GPS Data in Schizophrenic Patients ................................324
Sonia Difrancesco, Paolo Fraccaro, Sabine N. van der Veer, Bader Alshoumr, John Ainsworth, Riccardo Bellazzi, and Niels Peek

xi
The Potential of Using Voice Recognition in Patient Assessment
Documentation in Mountain Rescue ...............................................................329
   Rita Darcy, Phil Gallagher, Sarah Moore, and Daniel Varghese

How Effective are Teleconsults to Persuade Patients of Pulmonary Tuberculosis of Avoiding to Use Public Transport at Lima City? ........................................333
   Huber Nieto-Chaupis

Using Fitt’s Law to Model Arm Motion Tracked in 3D by a Leap Motion Controller for Virtual Reality Upper Arm Stroke Rehabilitation ........................................335

Data Analysis and Knowledge Discovery 6 — Disease Monitoring
A Game-Based Approach to Monitor Parkinson’s Disease: The Bradykinesia
Symptom Classification .....................................................................................337
   Leonardo Medeiros, Hyggo Almeida, Leandro Dias, Mirko Perkusich,
   and Robert Fischer

Using Mobile Serious Games in the Context of Chronic Disorders: A Mobile Game Concept for the Treatment of Tinnitus ..................................................343
   Marc Schickler, Rüdiger Pryss, Manfred Reichert, Johannes Schobel,
   Berthold Langguth, and Winfried Schlee

Towards Situation-Aware Mobile Applications in Mental Health ..................349
   Ariel S. Teles, Artur Rocha, Francisco J. Silva, João Correia Lopes,
   Donal O’Sullivan, Pepijn Van de Ven, and Markus Endler

Applicability of LED-Based Light Sources for Diabetic Retinopathy Detection in Retinal Imaging ..........................................................355
   Piotr Bartczak, Pauli Fält, and Markku Hauta-Kasari

Author Index ......................................................................................................361
