CyberSciTech 2016

Regular Papers

Perspectives on Cyber Science and Technology for Cyberization and Cyber-Enabled Worlds ................................................................. 1
  Jianhua Ma, Kim-Kwang Raymond Choo, Hui-huang Hsu, Qun Jin, William Liu,
  Kevin Wang, Yufeng Wang, and Xiaokang Zhou

Software Defined Small Cell Networking under Dynamic Traffic Patterns ............................................................ 10
  Li Zhou, Jiao Zhang, Boon-Chong Seet, Lei Zuo, Xiping Hu, Jiaxun Li,
  Shan Wang, and Jibo Wei

A Visual Inspection System for Rail Corrugation Based on Local Frequency Features ............................................................ 18
  Qingyong Li, Yunqiang Tan, Zhang Huayan, Shengwei Ren, Peng Dai, and Weiyi Li

Surface Construction from Kinect RGB-D Stream .................................................................................................................. 24
  W.G.C.W. Kumara, Timothy K. Shih, Hui-Huang Hsu, Shih-Jung Wu,
  Stanislav Klimenko, and Andrei Klimenko

Record Linkage Using the Combination of Twice Iterative SVM Training and Controllable Manual Review ............................................................ 31
  Fei Wang and Hongbo Wang

Personal Data Analytics to Facilitate Cyber Individual Modeling .................................................................................................................. 39
  Xiaokang Zhou, Bo Wu, Qun Jin, Jianhua, Ma, Weimin Li, and Neil Y. Yen

Emerging Mobile Communication Technologies for Healthcare System in 5G Network .................................................................................................................. 47
  Sadia Din, Anand Paul, Awais Ahmad, and Seungmin Rho

  Huitao Yang, Boon-Chong Seet, Syed Faraz Hasan, Peter Han Joo Chong,
  and Min Young Chung

Applying Virtual Coordination Anchor Node to Routing Mechanism in Wireless Sensor Networks .......................................................... 61
  Ying-Hong Wang and Cheng-Han Tsai

Message Forwarding Strategies in Device-to-Device Based Mobile Social Networking in Proximity (MSNP) .................................................................................................................. 69
  Yufeng Wang, Jiabing Chen, Qun Jin, and Jianhua Ma

A Scheme for Controlling Functionality of Mobile Device Using Specialized Codes .......................................................... 75
  Su-Wan Park and Jeong Nyeo Kim
Poster Papers

A Fault Injection Simulation Method Based on Petri Net .................................................................83
   Haitao Liu, Yu Huang, Guangxian Lv, Peng Jin, and Xueyuan Su

A Cyber Voice Recognition with Low SNR .........................................................................................87
   Hua-An Zhao

Evaluation of Network Risk Using Attack Graph Based Security Metrics .......................................91
   Santosh Kumar, Anuradha Negi, Keshav Prasad, and Aniket Mahanti

What Influences the Students' Learning Experience? The Impact of Peer Learning in an Online Environment .................................................................................................................94
   Songlak Sakulwichitsintu

Special Sessions

Cyber Data Mining for Natural Language Processing

Review of Research on Computer Games for Tibetan Chess .................................................................97
   Xiali Li, Songting Deng, Xinyang Wang, Yongji Li, Licheng Wu, and Junxian Duan

The Design and Implementation of a High-Efficiency Distributed Web Crawler ...............................100
   Qiumei Pu

Ontology Modeling and Application of Multi-agent for Negotiation System .....................................105
   Qiumei Pu and Hong Zhang

A Preliminary Study of Plant Domain Ontology ................................................................................109
   Xiaoxu Li, Yiming Zhang, Junli Wang, and Qiumei Pu

User Modeling Driven Personalized Services in Social Cyberspace

A Proportional Multi-resource Scheduling Model in SDCloud .........................................................113
   Hang Zhou, Qing Li, Ningning Dong, Xinying Zhu, and Xiaodong Liu

The Construction and Analysis of Baidu Baike Entry Network .......................................................119
   Lei Wang, Lingyu Xu, Jie Yu, Yunlan Xue, Gaowei Zhang, Xiang Yu, and Bofeng Zhang

Socialized User Modeling in Microblogging Scenarios for Interest Prediction ...............................124
   Mingqing Huang, Bofeng Zhang, Guobing Zou, Chengwei Gu, Peiye Wu, Shulin Cheng, and Zhu Zhang

Overview of the Task Management System of Ternary Optical Computer ......................................132
   Sulan Zhang, Yi Jin, Yunfu Shen, Junjie Peng, Shan Ouyang, and Cong Peng

An Asynchronous Distributed ADMM Algorithm and Efficient Communication Model ..................136
   Ling Fang and Yongmei Lei
Cyber Social Computing and Cyber-Enabled Applications
Analysis and Modeling for Interaction with Mobility Based on Pi-Calculus ..................................................141
Yaya Liu and Jiulei Jiang

A Probabilistic Perspective Model for Recommendation Considering Long Tail Effect ............................................147
Shuanghu Luo and Jun Xie

An Ontology Pattern for Emergency Event Modeling .........................................................................................151
Wei Liu, Yue Tan, Ning Ding, Yujia Zhang, and Zongtian Liu

An Image Encryption Method Based on RSFPrLR, RSLPrFL Circulant Matrices ........................................................................................................157
Xing Wu and Shuji Dai

Overlap Community Detection Based on Node Convergence Degree ..........................................................163
Weimin Li, Shu Jiang, HuaiKou Miao, Xiaokang Zhou, and Qun Jin

Cyber Security and Privacy with Network Log Analytics
An Anonymous Scheme for Current Taxi Applications ..........................................................................................168
Zijian Zhang, Ange Tong, Liehuang Zhu, Mingxin Chen, and Pengchuan Su

Intrusion Detection Based on IDBM ..................................................................................................................173
Yajun Liu and Xuan Zhang

A MapReduce-Based Framework for Analyzing Web Logs in Offline Streams ..................................................178
Ruoyu Chen, Yangsen Zhang, Rongrong Bi, Yuru Jiang, and Yanhua Zhang

Measuring Structural Resilience through a Carrier Network Model ....................................................................184
Ziheng Wei and Jiamou Liu

Big Data Techniques and Image Processing under Cyber
Noisy Problem on Discrete Linear Consensus Protocol in Networked Multi-agent Systems ................................190
Dou Quan-Sheng, Li Jin-Jiang, Fan Hui, and Pan Yuehao

ShapeNets: Image Representation Based on the Shape ....................................................................................196
Hui Fan, Yan Zhang, Zhen Hua, Jinjiang Li, Tao Sun, and Menglin Ren

Causal Association Analysis Algorithm for MOOC Learning Behavior and Learning Effect ................................202
Hongyan Wang, Xingwei Hao, Wenjiang Jiao, and Xingwu Jia

Construction of Learning Partners Based on Learning Interest ........................................................................207
Mingliang Hou, Xingwei Hao, Shuo Tian, and Yi Liu

Single Image Super-resolution Based on Self-Similarity and Dictionary Neighborhood ................................211
Liang Guo, Guizhong Wang, Fan Zhang, and Xuemei Li
A New Interpolation Algorithm Based on the Frequency Transform ................................................217
   Fan Qinglan, Zhang Yunfeng, Yao Xunxiang, Bao Fangxun, and Shen Xiaohong

Saliency Detection Based on Multi-scale Image Features .................................................................223
   Chaoqun Zheng, Xiaozhi Zheng, Guizhong Wang, Shuo Tian, and Qiang Guo

Weakly-Supervised Classification of Pulmonary Nodules Based on Shape
Characters ........................................................................................................................................228
   Jingqi Song, Hui Liu, Fenghuan Geng, and Caiming Zhang

Single Image Dehazing Method under the Influence of Un-uniform Illumination ..........................233
   Wenhua Zhang, Shanshan Gao, Jing Chi, Hui Liu, and Yuanfeng Zhou

**Cyber-Physical System for Sustainability**

   Asif Iqbal, Colin Pattinson, and Ah-Lian Kor

Evaluation of ICT Environmental Impact for an SME .................................................................245
   Michail Papanderou, Ah-Lian Kor, and Colin Pattinson

Effective Green IT Strategy in a UK Higher Education Institute .....................................................251
   Latifah M. AlHarbi and Colin Pattinson

An Evaluation of the Impact of Remote Collaboration Tools on Corporate Sustainability ................257
   Jeanette Shaw, Ah-Lian Kor, and Colin Pattinson

**DASC 2016**

**Regular Papers**

Enhancing Windows Firewall Security Using Fuzzy Reasoning .........................................................263
   Nitin Naik and Paul Jenkins

MalAware: Effective and Efficient Run-Time Mobile Malware Detector .........................................270
   Jelena Milosevic, Alberto Ferrante, and Miroslaw Malek

uAuction: Analysis, Design, and Implementation of a Secure Online Auction System ...................278
   Nazia Majadi, Jarrod Trevathan, and Neil Bergmann

Collusion Attack Detection in Networked Systems .........................................................................286
   Md Zakirul Alam Bhuiyan and Jie Wu

A Model to Evaluate the Credibility of Service in Cloud Computing Environment ........................294
   Li Liao, Bixin Li, and Chao Li
Sensor-Cloud and Power Line Communication: Recent Developments and Integration .................................................................302

Chunsheng Zhu, Yinjia Huo, Victor C.M. Leung, and Laurence T. Yang

Detecting Denial of Service Attacks in the Cloud ........................................................309

Raneel Kumar, Sunil Pranit Lal, and Alok Sharma

Multi-stakeholders’ Policy Enforcement for Android ...................................................317

Shahryar Khan Afridi, Daud Khan, Latif Jan, and Aftab Khan

Developing a Mobile System for Natural Language Grammar Acquisition ................322

Marina Purgina, Maxim Mozgovoy, and Vitaly Klyuev

Needleman-Wunsch and Smith-Waterman Algorithms for Identifying Viral Polymorphic Malware Variants ....................................................326

Vijay Naidu and Ajit Narayanan

Hierarchical Transactional Memory Protocol for Distributed Mixed-Criticality Embedded Systems ..........................................................334

Zaher Owda, Moisés Urbina, Roman Obermaisser, and Mohammed Abuteir

ChainVoxel: A Data Structure for Scalable Distributed Collaborative Editing for 3D Models .................................................................344

Kengo Imae and Naohiro Hayashibara

Dependency Management in Component-Based Building Automation Systems ..................352

Malte Burkert and Heiko Krumm

Distributed Strategic Learning for Building Network Embedded Coding to Achieve Reliable Event Notification ..................................................360

Christian Esposito, Aniello Castiglione, Francesco Palmieri, and Florin Pop

Autocorrelation-Based Detection of Infinite Loops at Runtime ......................................368

Andreas Ibing, Julian Kirsch, and Lorenz Panny

A Publish/Subscribe Protocol for Event-Driven Communications in the Internet of Things ........................................................................376

Christian Esposito, Aniello Castiglione, Francesco Palmieri, Massimo Ficco, and Kim-Kwang Raymond Choo

A Discussion and Review of Network Steganography .....................................................384

Jun O Seo, Sathiamoorthy Manoharan, and Aniket Mahanti

Design and Analysis of IoT Applications: A Model-Driven Approach ..........................392

Bruno Costa, Paulo F. Pires, Flávia C. Delicato, Wei Li, and Albert Y. Zomaya

Range Encoding-Based Network Verification in SDN ..................................................400

Yen-Lun Tseng, Guey-Yun Chang, Chun-Chung Shih, Yue-Xin Liu, and Tien-Hsiang Wu

OmPe-Fibo: An Efficient Forbidden Pattern Free CAC Design for NoCs ......................406

Zahra Shirmohammadi, Yassin Allivand, Fereshte Mozafari Gharba, and Seyed Ghassem Miremadi
Attack Detection in Cloud Infrastructures Using Artificial Neural Network with Genetic Feature Selection .................................................................414
  Sayantan Guha, Stephen S. Yau, and Arun Balaji Buduru

Stereoscopic Image Quality Assessment Based on Cyclopean Image .................................................................420
  Kaixuan Lu and Wei Zhu

Poster Papers
An Efficient Tool for Industrial Control System Security Analysis ..................................................................................424
  Chuangming Xia, Jing Tian, Erqing Li, Junwei Zhou, Jianwen Xiang, Jin Wang,
  Liang Bai, and Yueying He

  Nitin Naik and Paul Jenkins

The 2nd International Workshop on Social Computing in Health Informatics (Social Health 2016)
Tolerance-Based Group Scoring Scheme Promotes Cooperation in Public Goods Game .................................................................432
  Haiping Zhang, Gang Wang, Hongjun Qiu, Weitong Hu, and Lanping Yu

An Improved Exponential Smoothing Model on Rental Trends Prediction of Public Bicycle Stations .................................................................437
  Fei Lin, Linyao Zhang, Haitao Xu, and Yong Sun

Effect of Different Migration Strategies on Evolution of Cooperation in Spatial Prisoner's Dilemma Game .................................................................442
  Hong Ding, Xiangyu Chen, Benyun Shi, Yanming Ye, and Yizhi Ren

International Workshop on Emerging Dependable Computing System Technologies and Applications (EDCSTA 2016)
Threat Modeling in Cyber-Physical Systems ........................................................................................................448
  Eduardo B. Fernandez

An Ontology-Based Framework for Hybrid Cloud Resiliency Mechanism ..................................................................................454
  Toshihiro Uchibayashi, Bernady O. Apduhan, and Norio Shiratori

PlCom 2016
Regular Papers

Discovering Items with Potential Popularity on Social Media .................................................................459
  Khushnood Abbas, Luo Xin, and Shang Mingsheng

Harnessing Smartphones as a Personal Informatics Tool
towards Self-Awareness and Behavior Improvement .................................................................467
  Hania Aslam, Hamid Mukhtar, Farhana Seemi, and Djamel Belaïd

A Framework for Third Party Android Marketplaces to Identify Repackaged Apps ................................................475
  Nai-Wei Lo, Shau-Kang Lu, and Yo-Hsuan Chuang

A Novel Network Selection Mechanism for Vehicle-to-Infrastructure Communication ................................................483
  Emmanuel Ndashimye, Nurul I Sarkar, and Sayan Kumar Ray

Architecture and Protocols for Inter-cell Device-to-Device Communication in 5G Networks ................................................489

Assessing Device-Free Passive Localization with a Single Access Point ..........................................................493
  Debraj Basu and Syed Faraz Hasan

Communities Evolution Analysis Based on Events in Dynamic Complex Network ..........................................................497
  Yao Hong, Cai Fu, Qingfeng Huang, Zhicun Fang, JieHua Zeng, and Lansheng Han

Early Stage Internet Traffic Identification Using Data Gravitation Based Classification ..........................................................504
  Lizhi Peng, Haibo Zhang, Bo Yang, Yuehui Chen, and Xiaqing Zhou

LPA: Learning-Based Power Aware Communication Protocol in WBANs ..........................................................512
  Abbas Arghavani, Haibo Zhang, and Zhiyi Huang

A Moment-Based Classification Algorithm and Its Comparison to the K-Nearest Neighbours for 2-Dimensional Data ..........................................................520
  Krzysztof Pawelec and Artem Lenskiy

An Intelligent Defects Identification for Motors Using Partial Discharge Signals ..........................................................526
  Hong-Chan Chang, Cheng-Chien Kuo, and Yuan-Sheng Li

Automated Scene Analysis by Image Feature Extraction ..........................................................530
  Syed Omer Gilani, Mohsin Jamil, Zahra Fazal, Muhammad Samran Naveed, and Rabiel Sakina

ICFS: An Improved Fast Search and Find of Density Peaks Clustering Algorithm ..........................................................537
  Jing Gao, Liang Zhao, Zhikui Chen, Peng Li, Han Xu, and Yueming Hu
Proactive Intelligent System for Optimizing Traffic Signaling ..................................................544
   R. Sanchez-Iborra, J.F. Ingles-Romero, G. Domenech-Asensi,
   J.L. Moreno-Cegarra, and Maria-Dolores Cano

A Lightweight Trust Design for IoT Routing ...........................................................................552
   David Airehrour, Jairo Gutierrez, and Sayan Kumar Ray

Hybrid Backtracking Search Optimization Algorithm and K-Means
for Clustering in Wireless Sensor Networks ........................................................................558
   N.M. Abdul Latiff, N.N. Nik Abdul Malik, and L. Idoumghar

A Two-Level Load Balancing Method with Dynamic Strategy for Cloud
Computing ..................................................................................................................................565
   Yan-Wun Qiu and Jen-Ing G. Hwang

A Simulated Annealing Combined Genetic Algorithm for Virtual Machine
Migration in Cloud Datacenters ..................................................................................................572
   Yidong Li, Xiangjun Meng, and Hairong Dong

A Usability Study on the Privacy Policy Visualization Model ..................................................578
   Kambiz Ghazinour and Tahani Albalawi

Are Coarse-Grained Overlays Ready for General Purpose Application
Acceleration on FPGAs? ............................................................................................................586
   Abhishek Kumar Jain, Douglas L. Maskell, and Suhaib A. Fahmy

Fast CU Size Decisions for HEVC Intra Frame Coding Based on Support
Vector Machines .........................................................................................................................594
   Deyuan Liu, Xingang Liu, and Yayong Li

A Low-Complexity Intra Prediction Mode Selection Algorithm in HEVC ..............................598
   Wentao Yang and Yiming Pi

**DataCom 2016**

**Regular Papers**

Online Resource Management in Thermal and Energy Constrained
Heterogeneous High Performance Computing ........................................................................604
   Mark A. Oxley, Sudeep Pasricha, Anthony A. Maciejewski, Howard Jay Siegel,
   and Patrick J. Burns

Performance Optimization of the SSVD Collaborative Filtering Algorithm
on MapReduce Architectures .......................................................................................................612
   ShiouCheng Yu, Quey-Liang Kao, and Che-Rung Lee

expanCodes: Tailored LDPC Codes for Big Data Storage .........................................................620
   Yongmei Wei and Fengmin Chen

Backbone Traffic Pattern Analysing Based on Joint Entropy .................................................626
   Jie Xu, Wei Ding, Jian Gong, and XiaoDong Zang
A Four-Layer Architecture for Online and Historical Big Data Analytics ........................................634
   Julie Yixuan Zhu, Jialing Xu, and Victor O.K. Li

FOG-Engine: Towards Big Data Analytics in the Fog .................................................................640
   Farahd Mehdipour, Bahman Javadi, and Aniket Mahanti

Self-Operation of a Network ........................................................................................................647
   Haitao Tang and Kaj Stenber

A Cloud-Based Network Architecture for Big Data Services ......................................................654
   Ming Zhao, Arun Kumar, G.G. Md. Nawaz Ali, and Peter Han Joo Chong

QoS Oriented Embedding for Network Virtualization .................................................................660
   Li Xu, Hui Li, Jingting Sun, Kai Pan, and Guanghui Zhang

NoWog: A Workload Generator for Database Performance Benchmarking ..............................666
   Parinaz Ameri, Nico Schlitter, Jörg Meyer, and Achim Streit

A Context-Aware Trust Prediction Method Based on Behavioral Data Analysis in Distributed Network Environments ..........................................................674
   Guoyu Yang, Qibo Sun, Ao Zhou, Jinglin Li, Xiang Yuan, and Hanyi Tang

Online Distance Measurement for Tree Data Event Streams ...................................................681
   Eileen Kuehn and Achim Streit

Comparing Intention and Behavior: Characteristics of Valuable Information and Information Verification .........................................................................................689
   Mathupayas Thongmak

Improving Recommendation Accuracy by Considering Electronic Word-of-Mouth and the Effects of Its Propagation Using Collective Matrix Factorization ........................................................................................................696
   Ren-Shiou Liu and Tian-Chih Yang

On the Role of Mobility and Network Coding on Multi-message Gossip in Random Geometric Graph .................................................................................................704
   Gang Wang, Zun Lin, and Jie Wu

CDR Based Temporal-Spatial Analysis of Anomalous Mobile Users .........................................710
   Zhen Wang and Sihai Zhang

Efficient Processing of Uncertain Data Using Dezert-Smarandache Theory: A Case Study .........................................................................................................................715
   Hossein Jafari, Xiangfang Li, and Lijun Qian

A New Algorithm of Geometric Mean for Solving High-Order Fredholm Integro-differential Equations .................................................................................................723
   E. Aruchunan, N. Khajohnsaksumeth, and B. Wiwatanapataphee

ZQL: A Unified Middleware Bridging Both Relational and NoSQL Databases ................................730
   Jie Xu, Mengji Shi, Chaoyuan Chen, Zhen Zhang, Jigao Fu, and Chi Harold Liu

G-Storm: A GPU-Aware Storm Scheduler ..................................................................................738
   Yi-Ren Chen and Che-Rung Lee
Big Data Framework for Analyzing Patents to Support Strategic R&D Planning ..................................................746
    Wonchul Seo, Namhyoung Kim, and Sungchul Choi

Information Pricing: A Utility Based Pricing Mechanism ..................................................................................754
    Divya Rao and Wee Keong Ng

On the Incentive Effect of Reputation Systems ..........................................................................................761
    Han Jiao, Lu Lu, and Zhanhua Xin

Modeling of Resource Granularity and Utilization with Virtual Machine Splitting .............................................769
    Hojjat Baghban, Jerry Chou, Ching-Hsien Hsu, and Yeh-Ching Chung

Logico-linguistic Semantic Representation of Documents ............................................................................773
    Sharyar Wani, Mohamed Ridza Wahiddin, and Tengku Mohd. Tengku Sembok

Design and Partial Implementation of Health Care System for Disease Detection and Behavior Analysis by Using DM Techniques ..................................................................................................................781
    Dingkun Li, Hyun Woo Park, Musa Ibrahim M. Ishag, Erdenebileg Batbaatar, and Keun Ho Ryu

MSFS: Multiple Spatio-temporal Scales Traffic Forecasting in Mobile Cellular Network ........................................787
    Dandan Miao, Weijian Sun, Xiaowei Qin, and Weidong Wang

Forecasting Crimes Using Autoregressive Models .........................................................................................795
    Eugenio Cesario, Charlie Catlett, and Domenico Talia

Unsupervised Anomaly Detection Using Light Switches for Smart Nursing Homes .............................................................803
    Chih-Wei Ho, Chun-Ting Chou, Yu-Chun Chien, and Chia-Fu Lee

Interactive Healthcare Big Data Analytics Platform under Simulated Performance ..............................................811
    Dillon Chrimes, Belaid Moa, Hamid Zamani, and Mu-Hsing Kuo

A Comprehensive Validation Methodology for Trajectory Pattern Mining of GPS Data .............................................819
    Eugenio Cesario, Carmela Comito, and Domenico Talia

Efficient On/Off-Line Query Pre-processing for Telecom Social Streaming Data .................................................827
    Cheng Wu, Jigao Fu, Zhen Zhang, and Chi Harold Liu

Social Media Analysis on Evaluating Organisational Performance a Railway Service Management Context ................................................835
    Jie Yang and Ahm Mehbub Anwar

Analysis of Human Autonomic Nervous Activity Based on Big Data Measurement via SmartPhone ......................842
    Makoto Komazawa, Kenichi Itao, Hiroyuki Kobayashi, and Zhiwei Luo

Sustainability through Intelligent Scheduling of Electric Water Heaters in a Smart Grid ........................................848
    M.J. Booysen and A.H. Cloete
A New Topology Time Division Beacon Construction Approach for IEEE802.15.4/ZigBee Cluster-Tree Wireless Sensor Networks .................................................................856
Smain Femmam and Ikbal M. Benakila

Vehicle Classification in Acoustic Sensor Networks Based on Hybrid Dictionary Learning ..................................................................................................................861
Shuilin Guo, Rui Wang, Bin Liu, Qiyue Wei, and Yanping Li

A Data Science Model for Big Data Analytics of Frequent Patterns .........................................................866
Carson K. Leung, Fan Jiang, Hao Zhang, and Adam G.M. Pazdor

**Poster Papers**

Collaborative Filtering and Deep Learning Based Hybrid Recommendation for Cold Start Problem ........................................................................................................874
Jian Wei, Jianhua He, Kai Chen, Yi Zhou, and Zuoyin Tang

Privacy-Preserving Palm Print Authentication Using Homomorphic Encryption ...............................................878
Jong-Hyuk Im, JinChun Choi, DaeHun Nyang, and Mun-Kyu Lee

Log on Cloud: A SaaS Data Collection, Storage, and Analysis Framework ........................................882
Peng Xu, Yadong Zhang, and Kai Shuang

Scalable Interactive Geo Visualization Platform for GIS Data Analysis .........................................................886
Lekha R. Nair, Sarath Saleem, and Sujala D. Shetty

Stochastic Self-Organisation of Poorly Structured Data and Memory Realisation in an Information Domain When Designing News Events Forecasting Models ........................................................................................................890
S.A. Lesko and D.O. Zhukov

Generation of the Single Precision BLAS Library for the Parallella Platform, with Epiphany Co-processor Acceleration, Using the BLIS Framework ..........................................................894
Miguel Tasende

Enhancing Mobility Management and Supporting 3d Visualization ..........................................................898
Hanafy M. Ali

A Data Divergence Design Method for Testing Big Data Application ...........................................................905
Zhenyu Liu, Yun Hu, and Lizhi Cai

Temporal and Spatial Trend Analysis of Cloud Spot Instance Pricing in Amazon EC2 .................................................909
Khandelwal Veena, Chaturvedi Anand, and Gupta Chandra Prakash

PyramidViz: Visual Analytics and Big Data Visualization for Frequent Patterns ........................................913
Carson K. Leung, Vadim V. Kononov, Adam G.M. Pazdor, and Fan Jiang

A Distributed and Autonomous Guard System Based on Cloud Environments ...........................................917
Wei-Fa Liao, Hung-Min Sun, and Wei Wu
International Workshop on Big Data Programming and System Software (BDPSS) and Data Intensive Computing and Communications for Sustainable Development (DICC4SD)

Fast Processing SPARQL Queries on Large RDF Data ................................................................. 921
   Guang Yang, Pingpeng Yuan, and Hai Jin

A Semantic-Based Approach to Building Auxiliary System for Screen-Based Reading ................................................................. 927
   Huizhong Zhong, Shaofeng Li, Feng Zhao, Hai Jin, and Qin Zhang

Research about New Media Security Technology Base on Big Data Era ........................................ 933
   Zheng-Wu Lu

Design and Implementation of Hybrid Shingled Recording RAID System ........................................ 937
   Zheng-Wu Lu and Gang Zhou

Disaster EHealth-Sustainability in the Extreme ........................................................................ 943
   David Parry, Samaneh Madanian, and Tony Norris

CatchMe If You Can: Enable Sustainable Communications Using Internet of Movable Things ............................................................................. 947
   Ambreen Memon, William Liu, and Adnan Al-Anbuky

Author Index
