# TABLE OF CONTENTS

## VOLUME 1

### C1 COATING OPENING SESSION AND KEYNOTE

**Paper & Packaging Innovation**

*Ed Zumbiel*

### C2 MARKET TRENDS IN PACKAGING GRADE TRANSFORMATIONS

**Retail Ready Packaging**

*Charles P. Klass*

**Market Trends in Packaging**

*Dan Malenke*

**Trends Lightweight Paper Based Packaging**

*Robert Pederzani*

### C3 PAPERBOARD APPLICATIONS

**Post Print Laser Marking: A Solution to the Challenge of 100% Calcium Carbonate Coating When Using CO2 Lasers**

*Roger Bollstroem, Patrick Gane*

**Ultrafine Cellulose Particles for Coating**

*Sascha Galic*

**The Effect of Paperboard Coating Treatments on Polyethylene Adhesion During Extrusion Coating**

*Don Ventresca, Kelly Frey, Greg Welsch*

### C4 SUSTAINABLE PACKAGING

**Pigmented Formulations Containing Biobased Nanoparticle Binders for Curtain Coating Applications; Part 1: Rheological Study**

*Ting Chen, Margaret Joyce, Paul D. Fleming, Do Ik Lee, Steven Bloem bergen*

**Pigmented Formulations Containing Biobased Nanoparticle Binders for Curtain Coating Applications; Part 2: Curtain Stability Analysis**

*Ting Chen, Margaret Joyce, Paul D. Fleming, Do Ik Lee, Steven Bloem bergen*

**Conversations Around Environmental and Societal Drivers for Materials**

*Ramani Narayan*

### C5 COATED PAPER ANALYSIS

**Analysis of Microscope Images of Coating Layers That Contain Tagged Starch and Latex**

*Emilia Golebiowska, Douglas Bousfield, William Gramlich*

**New Method to Determine Pigment Friability: Example SPCC**

*Cathy Ridgway, Patrick Gane*

**Improved Discrete Element Method Model to Predict Coating Layer Mechanical Properties**

*Dan Varney, Douglas Bousfield*

### C6 SUCCESS STORIES

**Air Floatation Dryer Optimization**

*Don Cesario*

**Fast Track Coating Head Conversions at a North American Coated Paper Mill**

*Jeff Gorges*

**Cartones Ponderosa PM1: Curtain Coater Installation**

*Pam Hynnek*

**Calendering Control by Roll Hardness Measurement**

*Jyrki Laari*

### C8 FLEXO PRINTABILITY IN PACKAGING

**Paper Without Ink is Silent, Ink Without Paper is…Messy**

*James Ford*
Flexo Printability: Press Technologies .......................................................................................... 251
    Jean Jackson
Flexo Printability in Packaging ................................................................................................... 265
    Doug Weiss

C9 RHEOLOGY

Rheology: A Tutorial on the Basics ............................................................................................ 279
    Tony Lyons, Rajan Iyer
Review of Coating Thickening Mechanisms ............................................................................. 300
    John Roper
The Influence of Pigment Concentration, Particle Size Distribution, and Aspect Ratio on Rheology ............................................................. 314
    Lisa Weeks, Doug Bousfield, Anthony Lyons

M3 – YOUNG PROFESSIONALS PRESENT RECRUITING, RETENTION, AND REAL ISSUES FOR YPS IN THE WORKPLACE

How to Attract More Students to the Paper Industry ............................................................... 329
    Roland Gong, Karyn Biasca
Positioning for Success .................................................................................................................. 347
    Jonathan Kerr
Leading From Within .................................................................................................................... 359
    Bill Sleeper

M5 – EMBRACING CHANGE IS SUSTAINABILITY

Improving Without Capital – Releasing the Untapped Potential ............................................ 374
    Erin Saueracker

M8 – MEETING THE CHALLENGE OF CHANGE THROUGH THE WORKFORCE DEVELOPMENT

Aligning Workforce Development with the Business ............................................................... 381
    Patti Phillips
Suppliers Share Interest in Mill Workforce Development ......................................................... 387
    Daryl Wells

M11 – DIGITAL REVOLUTION: PULP & PAPER MILL OF THE FUTURE – INDUSTRY 4.0 – FUTURE IT OF THE MILL

Prediction and Simulation Analysis at Paper Mills ................................................................ 394
    Timo Arra
PIMA IT Symposium: Future IT of P&P Mill .............................................................................. 403
    Mike Harwood, Carl-Fredrik Hammarqvist, Christophe Deslandes, Timo Arra
Cloud Computing for Pulp and Paper Mills ............................................................................ 405
    Christophe Deslandes
Future at Paper Mill .................................................................................................................... 413
    Carl-Fredrik Hammarqvist

M12 – DIGITAL REVOLUTION: PULP & PAPER MILL OF THE FUTURE – SMART AND PREDICTIVE USE OF DATA AT MILLS

Big Data Application to Combine the Value Chain Data to Knowledge .................................. 422
    Matti Hakkinen, Mika Suni-Jarvi, Jari Salikonen, Michael Gee, Savcor Oy
Let's Put it on Paper: Data Strategies Towards Operational Excellence .................................. 427
    Mariana Sandin
Solving Big Data Problems in a Paper Mill .................................................................................. 445
    Rick Smith
Virtual Onsite Presence – Improving Access to Remote Experts ............................................. 457
    Michael Von Grumbkow, Jon Blankenship

O1 – MAINTENANCE & RELIABILITY

Job Plans for a Reliable Future: Communicating the Essentials .............................................. 468
    Dan Moss
O2 – MAINTENANCE & RELIABILITY

Basics of Self-Supported Rotary Joint Installation on Steam-Heated Paper Dryers ................................................................. 481
Alan Ives, Ken Lahrke

Reactive to Proactive & the Application of Strategic Reliability Principles .................................................................................. 497
Jay Shellogg

O3 – MAINTENANCE & RELIABILITY

Motors, Pumps, & Fans. It’s the Little Things that Make a Difference! .......................................................................................... 507
Robert Forstrom

Overlooking Rockers and Rocker Plates Can Lead to Dryer Component Failures ................................................................. 534
Myron Smith

PA1 – SUSTAINABILITY – FIBER AND FILLER

Improved Machine Efficiency Through Addition of GCC Filler in Recycled Liner and Medium ......................................................... 540
Lars Andersson

Enhancing Sustainability in Paper and Board Products .................................................................................................................. 552
Ekhard Beuleke

Low Energy CTMP in Strong and Bulky Paperboard Plies ........................................................................................................ 556
Gunilla Pettersson

PA2 – PAPERBOARD SUSTAINABILITY - ADDITIVES

The Benefits of Sustainability: A Mill’s Experience .......................................................................................................................... 565
Allen Bowdler, Julia Hulbert, Amy Sand, Jack Block, Dan Anderson

Odor in Recycled Packaging Grades. Identifying the Cause and Finding the Solution ............................................................. 569
David R. Jones

The Use of a New, On-site-generated Strength and Productivity Additive in Brown Grades Made with Recycled Fibers ................. 574
Jerry Sajbel

PA3 – SIZING INSIDE AND OUT

Prediction of Starch Penetration During Sizing and Drying ........................................................................................................ 578
Douglas Bousfield

Optimizing Printing Primers on the Size Press .............................................................................................................................. 599
Talia Collins

A Novel ASA Polymer Emulsifier for Improved Sizing Efficiency ...................................................................................................... 607
William Johnson, Bradley Benz

Continuous Starch Enzyme Conversion ........................................................................................................................................ 618
Erik Takens, Susan Sargeant

PA4 – IMPROVING PRODUCTIVITY USING PROCESS CHEMICALS

Don't Stop Believing...or You CAN Really Get What You Want! ............................................................................................... 631
Janie Lasik, Allen Bowdler

Tackling Complex Sheet Production Efficiency and Effluent Quality Issues Using Advanced Bioanalytical Strategies ............... 638
Liliya Land, Xuejun Wang, Laura Rice, Elisa Luth

New Commercial Process for Production of Mineral/ Microfibrillated Cellulose Composite Materials Exhibits Great Flexibility .......................................................... 650
David Skuse

PA5 – WATER QUALITY MANAGEMENT

Innovating Water Disinfection Treatment Programs in the Pulp and Paper Industry ............................................................. 666
Andrew Boal

Multiparameter Analyzers for Efficient Monitoring of Pulp and Paper Industrial Waters .......................................................... 674
Lori Carey

Fresh Water Quality – Quality Requirements and Treatment Options .......................................................................................... 675
David Cifuentes
PA7 – MICRO/NANO CELLULOSE

Cellulose Filaments: Discovery by FPInnovations of a Novel Strengthening Agent ................................................................. 683
Xujun Hua, Makhlouf Laleg, Thomas Owston

Physical Properties of Attritor Pulp-containing Handsheets ................................................................................................. 695
David Knox, Peter Hart, H. J. Moynihan, N. M. Kilgore

Phosphorylated Nanofibrillated Cellulose: Production and Properties .................................................................................. 706
Ali Naderi, Tom Lindstrom, Christoph F. Weise, Goran Flodberg, Jonas Sundstrom, Kristina Junel, Johan Erlandsson, Annmarie Runebjork

PA8 – ADDITIVE MIXING TECHNOLOGIES

Feeding Point and Mixing Power in Simultaneous Feeding of Filler and Starch ........................................................................ 723
Emmi Kallio, Jari Kayhko

Non-spinning, Fluidizing Flash Mixing Reactor for Synthetic Fibers, Nano- and Micro Fibers and Agressive Chemicals for Board, Paper and Tissue Production ........................................................................ 734
Jouni Matula

VOLUME 2

There's Always Room for Improvement - Flow Solutions in the Coatings and Additives Area ......................................................... 743
Vincent Miller, Jeff Wilmer

PF1 – DRIER WEB

Estimating Limits of Wet Pressing on Paper Machines ........................................................................................................ 751
David McDonald, Richard Kerekes

Influence on Sheet Dewatering by Structural Differences in Forming Fabrics ........................................................................... 767
Bjorn Sjostrand, Christophe Barbier, Lars Nilsson

Drier Paper Webs Through Research and Innovation ...................................................................................................... 777
Jun Xu, Gregory Pittman, Chuck Hunter, Beth Cormier, Fred Hanson, David Turpin

PF2 – CHALLENGES FOR MILLS CONVERTING TO LINERBOARD GRADES

Using Advanced Instrumentation for a Successful Gap Former Conversion from Newsprint/LWC to Corrugating Medium ............................................................................................................ 789
Frank Cunnane

Converting a Newsprint / P&W Grade Machine to Linerboard Grades….Considerations from an Approach Flow / Stock Preparation Standpoint ...................................................................................... 799
Richard Turnbull

PF3 – IMAGING TECHNOLOGY FOR PAPERMAKING

New Possibilities for Comprehensive On-line Web Monitoring and Web Inspection to Improve Papermaking Efficiency and Paper Quality .................................................................................................. 815
Kari Hilden

Real-time ROI Morphometrics in High Quality Web Imaging .................................................................................................... 834
Tommi Huotilainen, Myron Laster, Seppo Ritkonen

On-line Topography Analysis by Photometric Stereo Method – New Tools for Paper and Board Makers ........................................... 855
Seyhan Nuyan, Ismo Makinen

Advanced Image Based Measurement Techniques for Analysis of Process Variations .................................................................. 871
Catherine Ortlund, Hannes Vomhoff, Hans Christiansson

PF4 – FRONTIERS IN FORMING

Aqua Layering Headbox and Furnish Optimization: A Tool for Process Flexibility and Quality Improvement........................................ 879
Juan Cecchini, Hannu Turpeinen

The Effect of Long Fibers in Sheet Properties in Foam Forming .................................................................................................. 894
Antti Koponen, Katarina Torvinen, Ari Jasberg, Harri Kiskinen

PF5 – NEW SHEET MEASUREMENTS TECHNOLOGY

Characterization of Paperboard Formation using Soft X-radiography and Image Analysis .............................................................. 905
Hossein Abedsoltan, Gary Wood, D. Steven Keller
On-line Tissue Softness Measurement – A Useful Addition to Tissue Automation Concept ................................................................. 917
Tommi Loyttyniemi, Seyhan Nuyan, Marko Toskala

LED Based Color Sensor for Paper Web Measurement and Control ....................................................................................................... 924
Michael O'Hora, Hakan Hjalmers

PF6 – NEW PROCESS CONTROL TECHNOLOGY

Simplified Model Predictive MD Control of Paper Machines ........................................................................................................ 929
Michael Forbes, Cristian Gheorghe, Joyce Choi, Pezhman Nafissi
An Update on Consistency Transmitter Measurement Technology & Process Considerations ................................................................. 942
Mike Hendricks
Optimal Operation of a QCS Scanner in a Paper Machine Based on the Information of QCS and WIS Measurements ..................................... 952
Jukka-Pekka Raunio, Risto Ritala

PF7 – PERFORMANCE INDICES AND BENCHMARKING

On-line Process Analytics for Improved Process Control .................................................................................................................. 963
Timothy Deschaines
Visualization of Process, Control and Performance Information ........................................................................................................ 965
Calvin Fu, Seyhan Nuyan, Kevin Rohr
Innovations in Plant-Wide Monitoring, Diagnostics & Optimization ....................................................................................................... 973
Robert C. Rice

PF8 – FIBER SUSPENSION DYNAMICS

The Flocculation Response of a Dual Component Retention System Subject to Different Mixing Conditions ............................................. 987
Paul Krochak, Bo Norman, Lennart Hermansson
Flow Behavior of Refined Wood Fibre Suspensions ........................................................................................................................ 995
Abbas Nikbakht, James Olson, Mark Martinez

PF9 – APPLICATIONS OF CFD IN PAPERMAKING

Successful CFD Projects: An Overview of Successful Product Development Using Integrated Fluid Modeling and Experiments ................................................................. 1008
John J. Egan, Christopher L. Demler
Turbulent Stress Measurements of Fibre Suspensions in a Straight Pipe with MRV ................................................................. 1024
Jordan Mackenzie, Agne Swerin, Fredrik Lundell, Daniel Soderbert
Computer Simulations of Wet Press at a Flexible Individual Fiber Level ............................................................................................ 1032
Yihsin Tang, Dewei Qi

PM1 – WHO IS GOING TO DO?

Who Is Going To Do? Kickoff & Roundtable ................................................................................................................................. 1054
Jeff Reese

PM2 – WHO IS GOING TO DO? PANEL DISCUSSION

Paper Optimization Manager, Kapstone Paper ................................................................................................................................. 1065
Brad Bowman
Who's Gonna Do? ................................................................................................................................................................................... 1067
William Cone
Just Get it Done! ....................................................................................................................................................................................... 1070
Gary Neyer
Who's Gonna Do? (or How Are We Going to Do?) .......................................................................................................................... 1072
Steve Pearson
Who's Going to Do? Getting Things Done .......................................................................................................................................... 1076
Steve Smith

PM3 – WHO IS GOING TO TRAIN? PANEL DISCUSSION

How Much will Mentoring Impact the Future of Training? ................................................................................................................. 1081
Lesley Cook
Who You Could Turn To For Continuing Education Training ........................................................................................................ 1083
Mary Beth Cornell
What is Needed and How Will the Training be Done
Mike Kocurek

Bridging the Knowledge-to-Skills Gap Using the Humble PC
David Leigh

Developing Leaders for the Future of Our Industry
Chris Luettgen

Innovative Technology Training Strategy for the Pulp, Papers and Chemical Process Industries
Christie Prout

PM4 – WHO IS GOING TO DO THE REBUILDS?

Grade Conversion from Graphic to Packaging Paper, A Successful Case Study
Martin Janich

How to Effectively Improve Paper Quality? - A Modern Hydraulic Headbox as a Cost Effective Way to Enhance
PM Performance
Maja Mejnner

Reducing the Risks and Raising the RoI in Conversions of Groundwood and Freesheet Machines to Packaging
Daryl Wells, Dave Burton

PM5 – WHO IS GOING TO MANAGE OUR PROJECTS?

Equipment Installations with Virtual Process Integration: A New Method for Reducing Downtime and Eliminating Change Orders
Kenneth Carrillo

PM6 – WHO IS GOING TO COME UP WITH BETTER MOUSETRAPS?

Optimizing Your Machine Efficiency Through New Seal Strip Technology
Wyatt Boyett

A New Family of Forming Structures Provide Higher Dewatering, Planar Sheet Surface, and Lower Drag Loads
Frank Cunnane

Optimizing Waste Water Treatment in Paper Mill Lagoons
Richard Grenville

PM8 – SUCCESS STORIES

Successful Shoe Press Installation at Greif's Riverville, Virginia Mill
Robby Compton, David Deese, Mitch Heishman

Weig Karton

Eye Opening Operating Results of Flash Mixing Reactor for Efficient Use of Wet End Additives
Jussi Matula

Mechanical Seal Selection, Reliability, and Optimization
Dick Reese

Cartones Ponderosa - Managing Change to Maintain Market Lead
Rex Robertson

Detailed Project Planning Helps American Eagle Paper Mills Achieve Impressive Results
Andrew Symons, Steve Pepin

PM9 – WHAT DO I DO WITH ALL THIS DATA?

Capture the Benefits of the ‘Stable and Capable Moments’
James Black

Who is Going to Optimize the Performance of Paper Machine Clothing?
Marcel Lensvelt

Utilization of Data for Diagnostics & Processes Transparency
Mika Suojarvi

PM10 – WHO IS GOING TO HELP US OPTIMIZE OUR SYSTEMS?

Optimizing Recycled Paperboard Production - Former Section
Blake Hender
Pumping Systems Optimization
William Livoti

Reducing Fresh Water Usage – Disc Filter Save-all Optimization
Nicolas Reinke

PM11 – WHO CAN HELP US DO?

Help OEMs Help You: Getting Better Designs for Automation and Reliability from Your Suppliers
Marie Getsug

If You Don’t Control Your Destiny Someone Else Will
Janie Lasik

A Directional Approach to Tasks On the Paper Machine
Michael Mackett

PM12 – WHO IS GOING TO HELP IMPROVE PAPER PERFORMANCE

Non-destructive Determination of Key Pulp & Paper Process Parameters
Timothy Deschaines

New Test Method for Predicting Crushing Elasticity in Medium Fluting, a More Relevant Than Total Fluting Test
Methods Like Cmt/concora
Thomas Furst

Impact of Kraft Hardwood and Softwood Pulp Viscosity on Paper Properties
Humphrey Moynihan

PM13 – WHO IS GOING TO DO? WRAP UP AND ROUNDTABLE

Track Wrap-up
Jeff Reese

RPTA1 – HOT TOPICS

Offsetting the Costs of Recycled Fiber Wastes
Paul Fowler

Food Packaging Safety & Mineral Oils Migration
George Fuchs

Developments in Mineral Oil Hydrocarbons Regulations in Europe
Paul Noe

RPTA2 – ADVANCES IN PRESSING TECHNOLOGY

Improved Uhle Box Dewatering
Farhad Fereydoonzad

Improved Performance with Unique Predictive Analytics
Eric Gustafson

High Performance Pressing on Recycled Paperboard
Rick Phillips

VOLUME 3

RPTA3 – IMPROVING PULPER OPERATIONS

Hydraflow Continuous Detrashing Systems
Christopher L. Demler

Opportunities and Approaches for Improving Broke Pulping
Hanna Jokinen

Pulper Upgrades: Process Considerations and Performance Expectations
William Pitman

Improving Pulper Operations: Low Energy Recycled Pulp Production
Greg Sleeper

RPTA4 – IMPROVING DRYER PERFORMANCE

Managing Siphon Life in Small Diameter Dryers: 48” Diameter and Smaller
Rick Hall
Overview Of Steam System Optimization ................................................................. 1556
   Mike Soucy

Paper Machine Dryer Section Troubleshooting ................................................... 1581
   Lawrence Yane

T1

The Profit from Monitoring and Improving Your Process Control .................... 1598
   Hank Brittain

T4

Alum and Rosin Based Sizing .................................................................................. 1641
   John Leckey

T6

Low Consistency Refining: 1 Day Training ....................................................... 1670
   Arrvind M. Singhal

T8

Printing and Printability ...................................................................................... 1706
   N/A

T9

Introduction to Pigment Coated Paper and Paperboard Grades, Processes and Materials ............................................................... 1805
   Charles P. Klass

TF1 – KEYNOTE SESSION

T&T Observations ............................................................................................. 1844
   Rod Fisher

TF2 – ALTERNATIVE FIBERS

New Kneader-Based Non-wood Pulping System for Tissue Fiber Production ..... 1867
   Hiroki Nanko
High-yield Pulp in Tissue and Towel ................................................................. 1882
   Zhirun Yuan, Jimmy Jong, Stephan Lariviere
A Review of Non-wood Fibres and Their Applications in Tissue ....................... 1894
   Xuejun Zou, Hongbin Liu

TF3 – UNDERSTANDING AND MEASURING TISSUE SOFTNESS – PANEL DISCUSSION

Understanding and Measuring Tissue Softness .............................................. 1905
   Jessica Carette
TSA (Tissue Softness Analyzer) – Objective Measurement of Tissue Softness ..... 1916
   Alexander Gruner
The Complexity of Understanding and Measuring Tissue Softness .................... 1922
   Ward Ostendorf, Jeff Sheehan, Monica Ho-Kleinvaechter, Dave Loebker
Measuring Paper Softness-Leveraging Sensory Hand Feel Panels in R&D and Manufacturing .......................................................... 1927
   Nicolette Vanderklauw, Andrea Cummings, Shuo Wang, Michelle Lyons

TF4 – PROCESS CONTROL FOR TISSUE

Predictive Analytics, Dynamic Suction Roll/Yankee Nip Monitoring and Innovative Cover Venting Deliver Significant Energy Savings and Improved Efficiency on Modern Tissue Machines .................................................. 1933
   Michael Ciccone
New On-Machine Instrumentation Provides Novel Process Control and Cost Saving Benefits .............................................................. 1940
   Frank Cunnane
Advanced Vibration Tool for Crepe Blade Monitoring .............................................................. 1955
  Timothy Patterson, Donald Schultz

TF5 – STRUCTURED SHEET INNOVATIONS

TAD Structured Sheet for Ultra-Premium Quality ................................................................. 1967
  Soren Eriksson
Measuring the Compressive Response of Embossed and TAD Features in Paper Towels ......................... 1986
  D. Steven Keller, Guizhou Wang
Evaluation of the Compressibility of Kitchen Towels .......................................................... 1998
  Hannes Vomhoff, Farnaz Farahani, Mikael Bouveng, Catherine Ostlund

TF6 – OPERATING EFFICIENCY/ENERGY SAVINGS

Transfer Efficiency Study of Spray Systems in High Web Speed Additives ......................... 2010
  Ben Drummond, Kathleen Brown, Rudi Schick
How to Minimize Energy and Increase Cleanliness in Tissue Plants: Part 2 .............................. 2022
  Marco Pescantin
Results from Paper Machine Energy Audits in Wisconsin Tissue Mills .................................. 2041
  Dick Reese
Energy Optimization of the Yankee Dryer Hood .................................................................... 2073
  Alfredo Sarli

TF7 – TISSUE PROCESS OPTIMIZATION

Improving Tissue & Converting Machine Efficiency by Detecting Defects and Reducing Breaks ......................... 2083
  Pete Angle
Paradigm Shift: Improved Dry Strength in Bath Tissue without Affecting Softness ...................... 2093
  Joseph Mahoney, J. Todd Sarraf
Creping Operating Window-Adhesive and Modifier Contributions ........................................ 2105
  Timothy Patterson
Advanced Fiber Management for Improved Tissue Machine Productivity and Quality .................. 2115
  Jeff Peters

TF9 – PRACTICAL SOLUTIONS FOR TISSUE

New Regulatory Standards and Practical Solutions for Combustible Dust: A Comprehensive Review ................. 2125
  W. Brad Carr
LiquifiRing Vacuum Pump Energy Savings .............................................................................. 2134
  Andy Smiltnek
The Inherent Non-Homogeneous Nature of Cast Iron and its Effect on Creping ......................... 2147
  John Holton

TF10 – STEEL YANKEE PANEL DISCUSSION

Steel Yankees General Topics ......................................................................................... 2166
  Marco Brujas
Steel Yankee Dryers: The Next Step in their Evolution ............................................................. 2173
  Clive Butler
Can You Identify These Materials Used to Manufacture Yankee Dryers? ............................... 2178
  Ronald Clarke
Steel Yankee Dryers and Tissue Making .............................................................................. 2192
  Magnus Hogman
Steel Yankee Logistics ......................................................................................................... 2199
  Michael Janosch

Author Index
