2016 IEEE Conference on Computational Intelligence in Bioinformatics and Computational Biology (CIBCB 2016)

Chiang Mai, Thailand
5-7 October 2016
Biomedical data modeling and mining

- Simulink Heart Model for Simulation of the Effect of External Signals  74
  Maxim Ryzhii and Elena Ryzhii

- Well-connectedness - A Novel Measure for Improving Protein Complex Detection from PPI Network  92
  Ananta Chowdhury, Jessica Sharmin Rahman and Md. Shiplu Hawlader

- A Meta Decision Tree Approach for B-cell Epitope Mining  122
  Yuh-Jyh Hu and Shun-Ning You

- Using Bayesian Modeling on Molecular Fragments Features for Virtual Screening  127
  David Hoksza and Petr Škoda

- Partial Logistic Artificial Neural Network with Automatic Relevance Determination and Markov Chain Monte Carlo Methods Applied in Medical Survival Studies  190
  Corneliu Arsene
Signal and Image Processing in Biomedical Engineering

- **Compressed Sensing Denoising for Segmentation of Localization Microscopy Data**  47
  Katharina P. Aschenbrenner, Sebastian Butzek, Christian V. Guthier, Matthias Krufczik, Michael Hausmann, Felix Bestvater and Jürgen W. Hesser

- **Comparing Features from ECG Pattern and HRV Analysis for Emotion Recognition System**  110
  Hany Ferdinando, Tapio Seppänen and Esko Alasaarela

- **Automatic Lung Segmentation in Chest Radiographs using Shadow Filter and Local Thresholding**  139
  Preeyanan Pattrapisetwong and Werapon Chiracharit

- **Epileptic Seizure Prediction using Zero-Crossings Analysis of EEG Wavelet Detail Coefficients**  151
  Sahar Elgohary, Seif Eldawlatly and Mahmoud I. Khalil

- **Neurodevelopment in Newborns as Quantified by Synchronization in the Electroencephalogram**  184
  Anurak Thungtong, Mark S Scher and Kenneth A. Loparo
Papers by Session

Pattern Recognition in Bioinformatics / Big data analysis and tools for biological and medical data / Real-World Applications

- **Gene Selection Using Interaction Information for Microarray-based Cancer Classification**  63
  Songyot Nakariyakul

- **Evolving Graph Compression using Similarity Measures for Bioinformatics Applications**  210
  Joseph Alexander Brown, Sheridan Houghten, Tyler Kennedy Collins and Qiang Qu

- **Cancer Classification using the Extended Biomimetic Pattern Recognition**  170
  Charles H. Lee and Duc Truong

- **A* Fast and Scalable High-Throughput Sequencing Data Error Correction via Oligomers**  1
  Franco Milicchio, Iain E. Buchan and Mattia C.F. Prosperi

- **Mining Distinctive DNA Patterns from the Upstream of Human Coding& Non-Coding Genes via Class Frequency Distribution**  145
  Jing-Doo Wang, Wen-Ling Chan, Charles C.N. Wang, Jan-Gowth Chang and Jeffrey J.P. Tsai
Papers by Session

Pattern Recognition in Bioinformatics

- MotifGP: Using Multi-Objective Evolutionary Computing for Mining Network Expressions in DNA Sequences  23
  Manuel Belmadani and Marcel Turcotte

- An Effective Approach to Identify Gene-Gene Interactions for Complex Quantitative Traits Using Generalized Fuzzy Accuracy  29
  Xiangdong Zhou and Keith C. C. Chan

- Protein Fold Identification Using Machine Learning Methods on Contact Maps  41
  K. Suvarna Vani and K. Praveen Kumar

- Computational Prediction of Bacterial Type IV-B Effectors Using C-terminal Signals and Machine Learning Algorithms  52
  Lingyun Zou and Kang Chen

- A Cross-Entropy Method for Change-Point Detection in Four-Letter DNA Sequences  57
  Tatiana Polushina and Georgy Sofronov
Papers by Session

Smart sensing and data processing in biomedicine / Systems and synthetic biology

- **Wearable antenna design for Bioinformation**  226
  Rui Pei, Jingchen Wang, Mark Leach, Zhao Wang, Sanghyuk Lee and Eng Gee Lim

  Hyun Woo Park, Erdenbileg Batbaatar, Dingkun Li and Keun Ho Ryu

- **A Gait Imbalance Evaluation System Using Multi-Sensor**  230
  Yongdeok Park, Woohyeong Cho, Chenghao Quan and Sangmin Lee

- **A Sitting Posture Recognition System Based on 3Axis Accelerometer**  234
  Sangyong Ma, Woo-Hyeong Cho, Cheng-Hao Quan and Sangmin Lee

- **Computational Intelligence for Metabolic Pathway Design: Application to the Pentose Phosphate Pathway**  68
  David James Skelton, Jennifer Hallinan, Sungshic Park, and Sungshic Park

- **A Bayesian Approach to Construct Context-Specific Ontology: Application to Protein Function Prediction**  216
  Hasna Njah, Salma Jamoussi, Walid Mahdi and Mohamed Elati
Parallel and distributed high performance computing solutions for computational intelligence methods / Gene expression array analysis

- **GPU-powered Bat Algorithm for the Parameter Estimation of Biochemical Kinetic Values** 79
  Andrea Tangherloni, Marco Salvatore Nobile and Paolo Cazzaniga

- **Parallel Implementation of Efficient Search Schemes for the Inference of Cancer Progression Models** 116
  Daniele Ramazzotti, Marco S. Nobile, Paolo Cazzaniga, Giancarlo Mauri and Marco Antoniotti

- **FAST: Fast Annotation with Synchronized Threads** 176
  Dongjae Kim, Aria S. Hahn, Niels W. Hanson, Kishori M. Konwar and Steven J. Hallam

- **Integrated Analysis of MicroRNA Regulation of Genes in HSIL** 17
  Shikha Suman, Ashutosh Mishra and Anurag Kulshrestha

- **Methods to Transform Microarray Data for Cancer Prediction** 85
  Anuchate Pattanateepapon, Watcharapan Suwansantisuk and Pinit Kumhom
Papers by Session

Technology design on human factors in biomedicine / Biomedical model parameterization / Biological network reconstruction

- Development of One Hand Drive Wheelchair System Design and Experiment of the Active Front Wheel System 98
  Daisuke Hayashi, Sho Yokota, Daisuke Chugo and Hiroshi Hashimoto

- Development of a Non-invasive Screening Device of Diabetic Peripheral Neuropathy Based on the Perception of Micro-vibration 104
  Hideyuki Sawada, Keiji Uchida, Junichi Danjo and Yu Nakamura

- Situation-Based Servo Braking Assistance for a Manual Wheelchair 133
  Daisuke Chugo, Noburiho Goto, Satoshi Muramatsu, Sho Yokota and Hiroshi Hashimoto

- Control Strategies for Intelligent Adjustment of Pressure in Intermittent Pneumatic Compression Systems 35
  Quanli Qiu, Pandeng Zhang and Jia Liu

- Simultaneous Execution Method of Gene Clustering and Network Inference 10
  Shuhei Kimura, Masato Tokuhisa and Mariko Okada-Hatakeyama

Modeling, simulation, and optimization of biological systems / Structure prediction and folding

- **Engineering Bacterial Populations for Pattern Formation**  157  
  Daniel Sutantyo, Christopher Walker, Nicholas deBono, Jarryd Vargas, Anil Wipat and Jennifer S. Hallinan

- **Revisiting Epidemic Network Evolution with a New Representation**  197  
  Meghan Timmins and Daniel Ashlock

- **Evolving Boolean Networks for Biological Control: State Space Targeting in Scale Free Boolean Networks**  204  
  Nadia S. Taou, David W. Corne and Michael A. Lones

- **Protein Secondary Structure Prediction through a Novel Framework of Secondary Structure Transition Sites and New Encoding Schemes**  163  
  Masood Zamani and Stefan C. Kremer

- **Biomedical App Lab: Revolutionizing Smartphones into Pocket Lab Equipment**  N/A  
  Samuel Gan
