American Gear Manufacturers Association Fall Technical Meeting 2016

Pittsburgh, Pennsylvania, USA
2 – 4 October 2016

ISBN: 978-1-5108-3241-1
# TABLE OF CONTENTS

Efficient Hard Finishing of Asymmetric Tooth Profiles and Topological Modifications by Generating Grinding .......................................................... 1  
A. Mehr, S. Yoders

The Whirling Process in a Company that Produces Worm Gear Drives .......................................................... 14  
M. Turci, G. Giacomozzi

Worm Screw High-Speed Manufacturing .......................................................... 36  
J. Feutren

Twist Control Grinding (TCG) .......................................................... 51  
W. Graf

Review of Microstructure and Properties of Non-Ferrous Alloys for Worm Gear Application and Advantages of Centrifugally Cast Gears .......................................................... 64  
G. Rajendran, J. Hassen

Pre-Nitriding: A Means of Significantly Increasing Carburizing Throughput .......................................................... 75  
T. Hart

Performance and Machining of Advanced Engineering Steels in Power Transmission Applications – Continued Developments .......................................................... 85  
L. Kamjou, N. Bylund, B. Marsh, T. Bjork, J. Fagerlund

Gear Design Relevant Cleanliness Metrics .......................................................... 101  
E. Damm, P. Glaws

Developments of High Hardness-Cast Gears for High-Power Applications in the Mining Industry .......................................................... 118  
F. Wavelet

Computerized Design of Straight Bevel Gears with Optimized Profiles for Forging, Molding, or 3D Printing .......................................................... 132  
A. Fuentes, I. Gonzalez-Perez, H. Pasapula

Contact Fatigue Characterization of Through-Hardened Steel for Low-Speed Applications Like Hoisting .......................................................... 153  
M. Octrue, A. Nicolle, R. Genevier

Determination of Load Distributions on Double Helical-Geared Planetary Gear Boxes .......................................................... 171  
T. Schulze

Designing Very Strong Gear Teeth by Means of High Pressure Angles .......................................................... 185  
R. Miller

Impact of Surface Condition and Lubricant on Effective Gear Tooth Friction Coefficient .......................................................... 207  
A. Isaacson, M. Wagner, S. Rao, G. Sroka

Surface Structure Shift for Ground Bevel Gears .......................................................... 219  
S. Strunk

Developing an Energy-Efficient Industrial Gear Oil .......................................................... 239  
S. Basu, D. Wilkerson, J. Vinci

Analysis of Excitation Behavior of a Two-Stage Gearbox Based on a Validated Simulation Model .......................................................... 253  
C. Brecher, C. Lopenhaus, M. Schroers

An Experimental and Analytical Comparison of the Noise Generated by Gears of Austempered Ductile Iron (ADI) and Steel Materials .......................................................... 269  
D. Houser, K. Hayyinen, S. Shon, J. Lefevre

Numerical Thermal 3D Model to Predict the Surface and Body Temperature of Spur and Helical Plastic Gears .......................................................... 294  
N. Raghuraman, D. Houser, Z. Wright

Influence of the Defect Size on the Tooth Root Load Carrying Capacity .......................................................... 311  
C. Brecher, C. Lopenhaus, J. Brimmers, J. Henser

Influence of Contact Conditions on the Onset of Micropitting in Rolling-Sliding Contacts Pertinent to Gear Applications .......................................................... 325  
A. Kadiric, P. Rycerz

Comparison of Tooth Interior Fatigue Fracture Load Capacity to Standardized Gear Failure Modes .......................................................... 344  
B. Al. R. Patel, P. Langloss

A New Approach to Repair Large Industrial Gears Damaged by Surface Degradation – The Refurbishment Using the Modification of Both the Profile Shift Coefficient and the Pressure Angle .......................................................... 363  
H. Albertini, C. Gorla, F. Rosa
