## Session 1: Distinguished Papers

Finding Resilience-Friendly Compiler Optimizations Using Meta-Heuristic Search Techniques  
*Nithya Narayananurthy, Karthik Pattabiraman, and Matei Ripeanu*  
Page 1

Diversity, Safety and Security in Embedded Systems: Modelling Adversary Effort and Supply Chain Risks  
*Ilir Gashi, Andrey Povyakalo, and Lorenzo Strigini*  
Page 13

A System-Level Architecture for Fine-Grained Privacy Control in Location-Based Services  
*Arielle Moro and Benoît Garbinato*  
Page 25

## Session 2: Software Security

Software Metrics and Security Vulnerabilities: Dataset and Exploratory Study  
*Henrique Alves, Baldoino Fonseca, and Nuno Antunes*  
Page 37

Coverage Metrics and Detection of Injection Vulnerabilities: An Experimental Study  
*Ana Paula Sayuri Matsunaga, Nuno Antunes, and Regina Moraes*  
Page 45

Inferring a Distributed Application Behavior Model for Anomaly Based Intrusion Detection  
*Eric Totel, Mouna Hkimi, Michel Hurfin, Mourad Leslous, and Yvan Labiche*  
Page 53
Session 3: Fault Tolerance

CrossCheck: A Holistic Approach for Tolerating Crash-Faults and Arbitrary Failures ..........................................................65

Arthur Martens, Christoph Borchert, Manuel Nieke, Olaf Spinczyk,
and Rüdiger Kapitza

SAREK: Optimistic Parallel Ordering in Byzantine Fault Tolerance ..........................................................77

Bijun Li, Wenbo Xu, Muhammad Zeeshan Abid, Tobias Distler,
and Rüdiger Kapitza

Session 4: Hardware Dependability

On the Effects of Cumulative SEUs in FPGA-Based Systems ..........................................................89

José Luís Nunes, João Carlos Cunha, and Mário Zenha-Rela

3D-DPS: An Efficient 3D-CAC for Reliable Data Transfer in 3D ICs ..........................................................97

Zahra Shirmohammadi, Nezam Rohbani, and Seyed Ghassem Miremadi

Ultrafast Error Correction Codes for Double Error Detection/Correction ..................................................108

Luis-J. Saiz-Adalid, Pedro Gil, Juan-Carlos Ruiz, Joaquin Gracia-Morán,
Daniel Gil-Tomás, and J.-Carlos Baraza-Calvo

Investigating the Effects of Process Variations and System Workloads on Reliability of STT-RAM Caches ..........................................................120

Elham Cheshmikhani, Amir Mahdi Hosseini Monazzah, Hamed Farbeh,
and Seyed Ghassem Miremadi

Session 5: Testing

Practical Emulation of Software Defects in Source Code ..........................................................130

Gonçalo Pereira, Raul Barbosa, and Henrique Madeira

Domenico Cotroneo, Domenico Di Leo, Roberto Natella, and Roberto Pietrantuono

Thierry Sotiropoulos, Jérémie Guiochet, Félix Ingrand, and Hélène Weaselynck

Session 6: Data Storage

Experimental Assessment of NoSQL Databases Dependability ..........................................................161

Luís Ventura and Nuno Antunes

Design and Implementation of a Consistent Data Store for a Distributed SDN Control Plane ..........................................................169

Fábio Botelho, Tulio A. Ribeiro, Paulo Ferreira, Fernando M. V. Ramos,
and Alysson Bessani
Session 7: Short Papers

Assuring Dependable Cloud-Based System Engineering: A Cloud Accountability Method .................................................................181
  David Ebo Adjepon-Yamoah and Zhenyu Wen

Expert-Guided Automatic Diagnosis of Performance Problems in Enterprise Applications ..............................................................185
  Christoph Heger, André Van Hoorn, Dušan Okanović, Stefan Siegl, and Alexander Wert

Towards a Common Safety Ontology for Automobiles and Railway Vehicles .............................................................189
  Bernhard Hulin, Hermann Kaindl, Thomas Rathfux, Roman Popp, Edin Arnautovic, and Roland Beckert

Multidimensional Log Analysis ........................................................................................................................................193
  Marcin Kubacki and Janusz Sosnowski

Session 8: Deployment and Evolution

Combining SAN and P-Graphs for the Analysis and Optimization of Industrial Processes ..............................................................197
  Riccardo Bernini, Andrea Bondavalli, Paolo Lollini, and Leonardo Montecchi

Dwarf: Shortening Downtime of Reboot-Based Kernel Updates ..................................................................................208
  Ken Terada and Hiroshi Yamada

Adaptive Deployment Infrastructure for Android Applications ...............................................................................218
  Junior Cupe Casquina, Jane D. A. Sandim Eleuterio, and Cecilia M. F. Rubira

Session 9: Fault Prediction and Tolerance

An RSU Replication Scheme for Dependable Wireless Vehicular Networks .................................................................229
  João Almeida, Joaquim Ferreira, and Arnaldo S. R. Oliveira

Transitioning Fault Prediction Models to a New Environment .................................................................................241
  Jesper Derehag, Elaine Weyuker, Thomas J. Ostrand, and Daniel Sundmark

A Performance Comparison of Algorithms for Byzantine Agreement in Distributed Systems ..................................................249
  Shreya Agrawal and Khuzaima Daudjee

Author Index ...........................................................................................................................................261
