Message from the ISSRE 2016 General Chair ................................................................. x
Message from the Program Co-Chairs ........................................................................... xi
Organizing Committee .................................................................................................. xii
Program Committees .................................................................................................. xiii
Subreviewers ................................................................................................................ xvi
Keynote Abstracts ......................................................................................................... xvii

Best Research Papers

On Adaptive Sampling-Based Testing for Software Reliability Assessment .................. 1
   Roberto Pietrantuono and Stefano Russo

Experience Report: Automated System Level Regression Test Prioritization Using
Multiple Factors ........................................................................................................... 12
   Per Erik Strandberg, Daniel Sundmark, Wasif Afzal, Thomas J. Ostrand, and Elaine J. Weyuker

Frequent Subgraph Based Familial Classification of Android Malware ......................... 24
   Ming Fan, Jun Liu, Xiapu Luo, Kai Chen, Tianyi Chen, Zhenzhou Tian,
   Xiaodong Zhang, Qinghua Zheng, and Ting Liu

Test Optimisation

SCOUT: A Multi-objective Method to Select Components in Designing Unit Testing .......... 36
   Eduardo Noronha de Andrade Freitas, Celso Gonçalves Camilo-Junior, and Auri Marcelo Rizzo Vincenzi

The Effect of Test Suite Type on Regression Test Selection .......................................... 47
   Nima Dini, Allison Sullivan, Milos Gligoric, and Gregg Rothermel

WAP: A Novel Automatic Test Generation Technique Based on Moth Flame Optimization ................................................................. 59
   Aya S. Metwally, Eman Hosam, Marwa M. Hassan, and Sarah M. Rashad
Human Aspects
Using a Cognitive Psychology Perspective on Errors to Improve Requirements Quality: An Empirical Investigation .................................................................65
Vaibhav Anu, Gursimran Walia, Wenhua Hu, Jeffrey C. Carver, and Gary Bradshaw
On the Personality Traits of GitHub Contributors ..........................................................77
Ayushi Rastogi and Nachiappan Nagappan
WAP: Understanding the Brain at Software Debugging .....................................................87
J. Duraes, H. Madeira, J. Castelhano, C. Duarte, and M. Castelo Branco

Testing
Distance-Integrated Combinatorial Testing ........................................................................93
Eun-Hye Choi, Cyrille Artho, Takashi Kitamura, Osamu Mizuno, and Akihisa Yamada
Evaluating the Effects of Compiler Optimizations on Mutation Testing at the Compiler IR Level ........................................................................................................105
Farah Hariri, August Shi, Hayes Converse, Sarfraz Khurshid, and Darko Marinov
Automatically Classifying Test Results by Semi-Supervised Learning ............................116
Rafig Almaghairbe and Marc Roper

Software Defects (Bugs)
Combining Word Embedding with Information Retrieval to Recommend Similar Bug Reports ..............................................................................................................127
Xinli Yang, David Lo, Xin Xia, Lingfeng Bao, and Jianling Sun
Yichuan Man, Cuixun Gao, Michael R. Lyu, and Jiuchun Jiang
CoLUA: Automatically Predicting Configuration Bug Reports and Extracting Configuration Options ........................................................................................................150
Wei Wen, Tingting Yu, and Jane Huffman Hayes

Static Analysis
RRF: A Race Reproduction Framework for Use in Debugging Process-Level Races ........162
Supat Rattanasuksun, Tingting Yu, Witawas Srisa-An, and Gregg Rothermel
Cause Points Analysis for Effective Handling of Alarms ..................................................173
Tukaram Muske and Uday P. Khedker
ORPLocator: Identifying Read Points of Configuration Options via Static Analysis .........185
Zhen Dong, Artur Andrzejak, David Lo, and Diego Costa
Anomaly and Vulnerability Analysis
Anomaly Detection and Root Cause Localization in Virtual Network Functions .........................................................196
  Carla Sauvanaud, Kahina Lazri, Mohamed Kaâniche, and Karama Kanoun
Experience Report: System Log Analysis for Anomaly Detection ............................................................................207
  Shilin He, Jieming Zhu, Pinjia He, and Michael R. Lyu
SV-AF — A Security Vulnerability Analysis Framework ..........................................................................................219
  Sultan S. Alqahtani, Ellis E. Eghan, and Juergen Rilling

Reasoning About Concurrency
Proving Concurrent Data Structures Linearizable .........................................................................................................230
  Vineet Singh, Iulian Neamtiu, and Rajiv Gupta
Detecting, Exposing, and Classifying Sequential Consistency Violations .............................................................241
  Mohammad Majharul Islam and Abdullah Muzahid
Approximate Lock: Trading off Accuracy for Performance by Skipping Critical Sections ........................................253
  Riad Akram, Mohammad Mejbah Ul Alam, and Abdullah Muzahid

Security
Goal-Driven Deception Tactics Design ......................................................................................................................264
  Cristiano De Faveri, Ana Moreira, and Vasco Amaral
Quantifying the Attack Detection Accuracy of Intrusion Detection Systems in Virtualized Environments ..........276
  Aleksandar Milenkoski, K. R. Jayaram, Nuno Antunes, Marco Vieira, and Samuel Kounev
Using Approximate Bayesian Computation to Empirically Test Email Malware Propagation Models Relevant to Common Intervention Actions .................................................................287
  Edward Condon and Michel Cukier

Software Quality and Reliability Evaluation
MHCP Model for Quality Evaluation for Software Structure Based on Software Complex Network ..........................298
  Yuwei Yang, Jun Ai, Xuelin Li, and W. Eric Wong
The Impact of Feature Selection on Defect Prediction Performance: An Empirical Comparison ................................309
  Zhou Xu, Jin Liu, Zijiang Yang, Gege An, and Xiangyang Jia
  Kazuhiro Okumoto
Program Analysis

Dodging Unsafe Update Points in Java Dynamic Software Updating Systems ..........................................................332
  Walter Cazzola and Mehdi Jalili

Fixing Resource Leaks in Android Apps with Light-Weight Static Analysis and Low-Overhead Instrumentation ..........................................................342
  Jierui Liu, Tianyong Wu, Jun Yan, and Jian Zhang

Predicting Consistent Clone Change ..........................................................................................................................353
  Fanlong Zhang, Siau-Cheng Khoo, and Xiaohong Su

Reliability Monitoring and Failure Analysis

Failure Models for Testing Continuous Controllers ...............................................................................................365
  Dominik Holling, Alvin Stanescu, Kristian Beckers, Alexander Pretschner, and Matthias Gemmar

Evaluation Metrics of Service-Level Reliability Monitoring Rules of a Big Data Service .............................................376
  Keun Soo Yim

Bear: A Framework for Understanding Application Sensitivity to OS (Mis) Behavior ..................................................388
  Ruimin Sun, Andrew Lee, Aokun Chen, Donald E. Porter, Matt Bishop, and Daniela Oliveira

Software Design

Switching to Git: The Good, the Bad, and the Ugly ......................................................................................................400
  Sascha Just, Kim Herzig, Jacek Czerwonka, and Brendan Murphy

Does Geographical Distance Effect Distributed Development Teams: How Aggregation Bias in Software Artifacts Causes Contradictory Findings ..........................................................412
  Thanh H. D. Nguyen, Bram Adams, and Ahmed E. Hassan

Experience Report: An Empirical Study of API Failures in OpenStack Cloud Environments ........................................424
  Pooya Musavi, Bram Adams, and Foutse Khomh

Software in Critical Applications

Domain Arguments in Safety Critical Software Development ......................................................................................435
  Jonathan Rowanhill and John C. Knight

Experience Report: Model-Based Test Automation of a Concurrent Flight Software Bus ..................................................445
  Dharmalingam Ganesan, Mikael Lindvall, Stefan Hafsteinsson, Rance Cleaveland, Susanne L. Strege, and Walter Moleski

Peeking into the Past: Efficient Checkpoint-Assisted Time-Traveling Debugging ......................................................455
  Armando Miraglia, Dirk Vogt, Herbert Bos, Andy Tanenbaum, and Cristiano Giuffrida
Issues in Android devices

Risk Assessment of User-Defined Security Configurations for Android Devices ..................................................467
  Daniel Vecchiato, Marco Vieira, and Eliane Martins

Software Aging Analysis of the Android Mobile OS .................................................................................................478
  Domenico Cotroneo, Francesco Fucci, Antonio Ken Iannillo, Roberto Natella, and Roberto Pietrantuono

Experienced Report: Detecting Poor-Responsive UI in Android Applications .............................................................490
  Yu Kang, Yangfan Zhou, Min Gao, Yixia Sun, and Michael R. Lyu

Author Index ............................................................................................................................................................502
