2016 Third International Conference on Trustworthy Systems and Their Applications (TSA 2016)

Wuhan, China
18 – 22 September 2016
## Table of Contents

**Message from the Steering Committee Chair** .........................................................................................viii
**Message from the Program Chairs** ............................................................................................................ix
**Steering Committee** .....................................................................................................................................x
**Organizing Committee** ................................................................................................................................xi
**Program Committee** ...................................................................................................................................xii
**Keynote** .......................................................................................................................................................xiii

### Anomaly and Vulnerability Analysis

Software Development and Reliability Analysis
Applying Software Defined Methodologies to Software Computing ........................................29
   William Cheng-Chung Chu, Chih-Hung Chang, Tse-Chuan Hsu,
   and Yen-Hua Huang

A Generalized Multiple-Valued Decision Diagram for Reliability Analysis
of Fault-Tolerant Systems ........................................................................................................36
   Jianwen Xiang, Siwei Zhou, Luyao Ye, Shengwu Xiong, and W. Eric Wong

Manufacturing Ontology Development Based on Industry 4.0 Demonstration
Production Line ..........................................................................................................................42
   Haibo Cheng, Peng Zeng, Lingling Xue, Zhao Shi, Peng Wang, and Haibin Yu

Program Analysis
The Normalized-PSO and Its Application in Attribute Weighted Optimal
Problem ......................................................................................................................................48
   Jinjie Gou, Cheng Wang, Wei Luo, and Jin Gou

Tracking Down Dynamic Feature Code Changes against Python Software
Evolution .....................................................................................................................................54
   Zhifei Chen, Wanwangying Ma, Wei Lin, Lin Chen, and Baowen Xu

A Search Based Context-Aware Approach for Understanding and Localizing
the Fault via Weighted Call Graph ..........................................................................................64
   Jingxuan Tu, Xiaoyuan Xie, Yuming Zhou, Baowen Xu, and Lin Chen

Architectural Evaluation and Verification
The Architecture of OPAL for the Software Process Improvement in High
Maturity Level ...............................................................................................................................73
   Sidou Dong, Aihua Ren, and Xin Wang

Mutual Exclusion Verification of Peterson’s Solution in Isabelle/HOL ..................................81
   Xiaojun Ji and Lihua Song

What Are the Dominant Projects in the GitHub Python Ecosystem? ......................................87
   Wanwangying Ma, Lin Chen, Yuming Zhou, and Baowen Xu

Software Testing, Security, and Reliability
Laboratory Reliability Testing Design of Solenoid Operated Directional-Control
Valves for Industrial Application ...............................................................................................96
   Xinbo Qian and Congchang Zhan

Reliability Analysis of Drilling Mud Pump Pressure Cylinder Hydraulic System ..................102
   Deliang Gu, Kuisheng Chen, Xinbo Qian, and Congchang Zhan
A Fast Regression Testing Method Using for EMS System Engineering Project
Xie Kai and Sun Chao

Study of Performance Testing of Information System Based on Domestic CPU
and OS
Li Dong, Xiong Jing, and Yang Chunhui

An Induction to the Development of Software Quality Model Standards
Jiayu Gong, Jiawen Lu, and Lizhi Cai

Design of a Creative Encryption Approach Based on Pataphysics
Xuan Wang, Lu Zhang, and Hongji Yang

Empirical Studies

A Time-Space Attribute-Based Evidence Fixing Method in Digital Forensics
Yu Yang, Chao Li, and Guozl Sun

An Empirical Analysis Method of Incentives for Talent Innovation Behavior
Xiaolan Chang and Yongle Zhao

Contrast and Analysis about the Characteristics of MPS and CDP in GPU
Kepler Architecture
Peng Yikang, Huang Zhibin, and Zhou Feng

Distributed Cloud Storage and Parallel Topology Processing of Power Network
Xianlong Lv, Xingong Cheng, and YongXi Lv

Optimal PMU Placement for the System Observability Based on System
Topology Model
Hongyu Wang, Xingong Cheng, and Xiju Zong
