Computing and Systems Technology Division 2016

Core Programming Area at the 2016 AIChE Annual Meeting

San Francisco, California, USA
13 - 18 November 2016

# TABLE OF CONTENTS

(8w) Smart City, Smart Energy, Smart Decision Making ................................. 1
   Xianan Wang

(8x) Solution Approaches for Large Scale Multistage Stochastic Programs with Endogenous and Exogenous
   Uncertainty .................................................................................................................. 3
   Bronnenkant Christian

(8a) Multi-Scale Process Systems Engineering ............................................................. 4
   Bruno A. Calafi

(8b) Petroleum Coke Morphology Mapping: A Mechanistic Approach Using Machine Learning ............................................ 7
   Pedro Amorim

(8c) Simulation and Optimization of Chemical Processes for CO2 Sequestration and New Clean Energy: Cyclic
   Adsorption Process, Membrane, and Direct Methanol Fuel Cell ........................................ 8
   Zhou H. Kang, Je S. Heo, Joon Y. Chong

(8f) Simulation of the Oil-Treatment Process in the Oil Sands Plant ........................................... 9
   Choon H. Kang, Seon Heo, Joon S. Heo

(8g) Effects of the Mixed Refrigerant Composition on the Performance of the Rankine Cycle Driven By LNG Cold
   Energy ......................................................................................................................... 10
   Choon H. Kang, Seon Heo, Joon S. Heo

(8i) Process System Engineering for Advanced Modular Continuous Pharmaceutical Manufacturing Platform .......................... 11
   Prasanna Singh

(8j) Optimization-Based Quantification of Performance Limits for Process Networks .......................... 17
   Flavio da Cruz

(8k) Dynamics of Discrete Systems: At the Interface of Engineering and Medicine ........................................ 19
   Anwesha Chaubhury

(8m) Application of Modeling and Optimization Methods in Biomedicine and Biorefineries ..................... 24
   Kirti Maheshkumar Yenke

(8o) New Modeling and Decision-Making Paradigms in Systems Engineering ................................. 30
   Alexander W. Dowling

(8p) Management of Energy Supply Chains Under Uncertainty ............................................. 33
   Omar J. Guerra, G. V. Reklaitis

(8q) Energy Systems Analysis to Enable a Sustainable Economy ..................................... 36
   Emre Gencer

(8w) Deterministic and Robust Model-Based Strategies for the Online Multi-Level Optimization of Batch
   Operations ....................................................................................................................... 37
   Francesco Rossi, Gintaras V. Reklaitis, Flavio Manenti, Guido Buzzi-Ferraris

(8y) Modeling and Control of Hybrid and Nonsmooth Process Systems ........................................ 38
   Peter G. Stechlinski

(8r) Energy Security and Environmental Protection: Bridging the Gap Between Theory and Application ................................. 41
   Mahdi Sharifzadeh

(8aa) Automatic Exploration of Potential Energy Surfaces: Towards Reaction Mechanisms, Rate Constants, and
   Product Branching Ratios From First Principles ......................................................... 44
   Adeel Jamal

(22a) Economic Model Predictive Control for Integrating Scheduling and Dispatch of Microgrid Power Systems ........... 47
   Michael Zachar, Prodromos Daoutidis

(22b) Moving Horizon Closed-Loop Scheduling of Processes Operating Under Dynamic Constraints ...................... 48
   Richard Pattison, Cara Tzvetcheva, Iiro Harjunkoski, Michael Baldea

(22c) The Control of Self-Interested Agents: Learning from Nature’s Wisdom of Crowds ...................... 49
   Yu Luo, Garud Iyengar, Venkat Venkatasubramanian

(22d) Subspace Based Quality Control of Variable Duration Batch Processes ...................................... 50
   Brandon Corbett, Prashant Bhaskar

(22e) Optimization Models for Shale Gas Development Planning: A Real-World Marcellus Shale Case Study .................. 53
   Marcus G. Deyoven, Ignacio E. Grossmann

(22f) A Theoretical and Computational Study of Continuous-Time Process Scheduling Models in the Context of
   Adjustable Robust Optimization .................................................................................. 55
   Nikolaos Lappas, Chrysanthos E. Gounaris

(22g) Decision Making Under Uncertainty in Integrated Planning of Generation and Transmission Capacities in
   Interconnected Power Systems ..................................................................................... 58
   Omar J. Guerra, Diego Tejada, Gintaras V. Reklaitis

(22h) An Efficient Method for Deriving Normalization Constants for Eigenfunctions of Sturm-Liouville Problems
   and Its Application to the Graetz Problem for Diffusive and Convection Heat/Mass Transfer .............. 59
   Joel Paulson, T. Alan Hatton, Richard Braatz
(27a) Systematic Framework for Carbon Dioxide Capture and Utilization Processes to Reduce the Global Carbon Dioxide Emissions .......................................................................................................................... 60

Heather H. Fox, Alisha Deshpande, S. Joe Qin, Lisa A. Brenskelle

Yasuki Kanba, Masanori Ishizuka, Hiyoshi Mizuno, Atsushi Tsutsui

(27c) Systems Design and Economic Analysis of Direct Air Capture of CO2 through Temperature Swing Adsorption on Metal Organic Frameworks ......................................................... 63

Anshuman Sinha, Lalit A. Darunite, Christopher W. Jones, Yoshiki Kawajiri, Matthew Reaff

(27d) New Performance Indicators for Adsorbents Used in CO2 Capture Swing Adsorption Processes ....................................................................................................................... 64

Seongbin Gu, Hong Jung, Jay H. Lee

(27e) Optimal Retrofit of a Post Combustion CO2 Capture Process Using Reduced Superstructure and Rate-Based Models .......................................................................................... 65

Ung Lee, Alexander Mittos, Chonghun Han, Changsoo Kim

(27f) Dynamic Modeling with Uncertainty Quantification of Solid Sorbent Based CO2 Capture Processes .......................................................................................................................... 66

Anca Olace, Dehangu Bhattacharya, Keenan Kocan, David Mebane

(27g) CO2 Capture and Conversion to Chemicals Via Syngas: Rigorous Modeling, Intensification, and Superstructure-Based Process Synthesis ........................................................................... 67

Priyadarshini Balasubramanian, Ishan Bajaj, M. M. Faraque Hasan

(28a) Efficient Estimation of Maximum Theoretical Productivity from Batch Cultures Via Dynamic Optimization of Flux Balance Models .............................................................................. 68

Peter St. John, Michael F. Crowley, Yannick J. Bomble

(28b) Computing Sensitivities for Nonsmooth Differential-Algebraic Equations ............................................................................................................................. 69

Piotr G. Stechinski, Paul I. Barton

(28c) Evolutionary Optimization Environment for Power Plant Control with Dynsim® Interface ................................................................................................................................. 70

Ghasan Al-Sinboli, Marco Perinotti, Dehangu Bhattacharya

(28d) Shale Gas Supply Chain Network Design and Operation Incorporating Rigorous Well Simulations .......................................................................................................................... 71

Jorge Chebeir, Hope Asala, Aryan Gerali, Arash Dahi Taleghani, Jose Romagnoli

Alistair D. Rodman, Dimitrios I. Gerogiorgis

Erdal Aydin, Kai Sundmacher

(28g) A Parallel Interior Point Solver with Cyclic Reduction for Solving Large-Scale Dynamic Optimization Problems .................................................................................................................. 81

Bethany Nicholson, Shivaikumar Kamerswaran, Thomas A. Badgwell, Lorenz T. Biegler

(28h) Computation of Sensitivities of Dynamic Systems with Lexicographic Linear Programs Embedded .......................................................................................................................... 82

Fahad Albalawi, Helen Durand, Panagiotis D. Christofides

(28i) Supervisory Event-Based Control of Networked Processes with Limited State Measurements ................................................................................................................................. 84

Da Xue, Nael H. El-Farra

(28j) Distributed Extremum Seeking Control Over Unknown Network ........................................................................................................................................................................ 87

Judith Etegbahlem, Martin Guay

(28k) Power Management in Microgrids with Controllable Loads and Energy Exchange Commitments ................................................................................................................................. 88

Michael Zachar, Prodromos Daoutidis

(28l) Forming Distributed Estimator Networks From Decentralized Estimators ........................................................................................................................................................................ 89

Xunyan Yin, Jinfeng Liu

(28m) Coarse Modeling of Circadian Rhythms in Heterogeneous Neural Networks ................................................................................................................................. 90

Tom S. Bertalan, Ioannis G. Konstantis

(28n) Dynamic Real-Time Optimization of Distributed MPC Systems ........................................................................................................................................................................... 91

Mohammad Z. Jamshidin, Christopher L. E. Swartz

(28o) Overview of CAST Activities and Programming ........................................................................................................................................................................... 94

Nick Sahinidis, Karl Schnelle

(28p) Towards a Computational Platform for General Flowsheet Synthesis ........................................................................................................................................................................ 95

Qi Chen, Ignacio E. Grossmann

Ronan Schneider, Peder Milanović, Dominique Bonvin

(28r) Gossip: Decomposition Software for the Global Optimization of Nonconvex Two-Stage Stochastic Mixed-Integer Nonlinear Programs ................................................................................. 101

Rohit Kannan, Paul I. Barton

(28s) Dimensionality Reduction of Dynamic Networks ........................................................................................................................................................................... 102

Alexander Holmes, Assimakis Kattis, Balázs Ráth, I.G. Konstantis

(28t) Robust Dynamic Principal Component Analysis Method for Modelling Process Data ................................................................................................................................. 103

Aitcha Deshpande, S. Joe Qin, Lisa A. Brunskele

(134a) Nonsmooth Models and Methods in Chemical Engineering ................................................................................................................................. 104

Kamil A. Khan, Harry A.J. Watson, Paul I. Barton

(134b) Perspectives on Predictive Control with Dual Control Feature for Stochastic Systems ........................................................................................................................................................................ 105

Ali Mesbah
(134c) Mathematical Modeling at the Food-Energy-Water Nexus ................................................................. 106

Kriarasos Zygourakis

(134d) Towards Systems-Scale Dynamic Metabolic Modeling ................................................................. 107

Mark P. Styczynski, Robert Drommns

(134e) Modeling Convergence of Circadian Clocks and Metabolism .................................................... 108

Seal-A Ba, Ioannis P. Andreadakis

(134f) Pore-Pore and Pore-Edge Interactions in Graphene Sheets and Nanoribbons ....................... 111

Lin Du, Dimitrios Maroudas

(142a) Mathematics for Data-Driven Modeling - The Science of Crystal Balls ............................. 112

Ioannis G. Kevrekidis

(142b) Decoding Common Features of Protein-Nanoparticle Interactions .......................................... 113

Qing Shao, Carol K. Hall

(142c) Design of Optimal Experimental Probes for Protein Dynamics Using Machine Learning and Variational Approach to Modeling Conformational Kinetics ................................................................. 114

Balaji Selvam, Shriraya Mittal, Chuankai Zhao, Divakar Shukla

(142d) Guiding Experiments Towards New Functional Materials with Informatics .......................... 115

Prasanna V. Balachandran, Dechen Sue, Turab Lookman

(142e) Pushing the Frontiers of Atomistic Modeling Towards Predictive Design of Materials ........ 116

Subramanian Sankaranarayanan, Badri Narayanan, Mathew Cherukara

(142f) Design of Ternary Transparent Conducting Oxides ................................................................. 117

Christopher Sutton, Matthias Scheffler, Luca M. Ghiringhelli

(142g) Development of Empirical Charge Transfer Interatomic Potential for Tantalum Oxide Nanostructures from First Principle Calculations ........................................................................ 118

Kiran Saxkumar, Badri Narayanan, Subramanian Sankaranarayanan

(142h) Machine Learning for Advancing Discovery of Novel Thermoelectric Materials. The Thermoel................................................................. 119

Afona Furmanchuk, Ankit Agrawal, James Saul, Jeff Doak, Gregory Olson, Alok Choudhary

(142i) Identifying Descriptors for Dielectric Breakdown Strength Using Genetic Programming .... 120

Fenglin Yuan, Tim Mueller

(142j) Machine Learning with Structural Fingerprints of Local Particle Environments ....................... 121

Matthew Spelling, Sharon C. Glotzer

(142k) Using Semi-Supervised Machine Learning to Map the Phase Diagrams of Open Materials Data Sets ................................................................. 122

Jason Hartwick-Stumpers, Jonathan Kenneth Bunn, Jinjun Hu

(150a) Sustainability Concepts in the Food-Energy-Water Nexus: Chemical Engineering Perspective ........................................................................ 123

Tapas Das, Heriberto Cabezas, Selma Mededovic Thagard

(150b) Optimizing Spatio-Temporal Sensor Placement for Nutrient Monitoring: Algorithmic Framework ........................................................................ 124

Kinnar Sen, Urmila M. Dixwekar

(150c) Bandwidth Study on Energy Use and Potential Energy Saving Opportunities in Manufacturing Food and Beverages ................................................................. 125

Vassilis M. Charitopoulos, lazaro G. Papaefthimiou, Vivek Das

(150d) Insight-Based Design of Local Integrated Systems for Food, Energy and Water ........................... 137

Melissa Leung Pah Hang, Elias Martinez Hernandez, Matthew Leach, Aidong Yang

(150e) Recovering Runoff Particulate-Bound Phosphorus Via Fungal Bioextraction .......................... 138

Andro Mandalis, Shawn Shields, Katie Gaviglio, Jerico Alcantara, Stephen Kaczmarek, Andrew Tangoman

(150f) Preliminary Study on Detroit’s Urban Food-Energy-Water (FEW) Nexus ................................. 139

Jia Liang, Qiating Zhao, Guiyun Yan, Joshua Newell, N.D. Love, Gleen Daigger, Shellei Miller

(150g) Closed-Loop Scheduling: Major Considerations, Paradoxes and Remedies .......................... 140

Dhruv Gupta, Christos T. Maravelias

(150h) Integration of Scheduling and Control Under Process Uncertainties ........................................ 143

Lisia S. Dias, Jinjun Zhuge, Marianthi Ierapetritou

(150i) A Framework for Integration of Design, Scheduling and Control for Chemical Processes Under Disturbances ................................................................. 144

Robert Koller, Luis A. Ricardes-Sandoval

(150j) Design, Scheduling and Control: A Simultaneous Approach By Multi-Parametric Programming ........................................................................ 145

Nikolaos A. Diangelakis, Badri Narayanan, Subramanian Sankaranarayanan

(150k) Coordinating Production Scheduling and Process Operation Via Economic Model Predictive Control ................................................................. 148

Anas Alanqar, Helen Durand, Fahad Albalawi, Panagiotis D. Christofides

(150l) Travelling Salesman Problem (TSP) Based Integration of Planning, Scheduling and Control for Continuous Processes ................................................................. 149

Temitayo Bankele, Dustin D. Jones, Debungho Bhattacharyya, Richard Turton, Stephen Zinney

(150m) Optimal Scheduling of Advanced Energy Plants with CO2 Capture ........................................ 150

Vassilis M. Charitopoulos, Lazaros G. Papaefthimiou, Vivek Das

(150n) Optimal Design and Control of a Catalytic Distillation Column: Case Study: Ethyl Tert-Butyl Ether (ETBE) Synthesis Column ......................................................... 151

David E. Bernal, Jorge Mario Gomez

(177a) A Novel and Systematic Method for Process Intensification .................................................... 154

N. N. Tempe, Li, Salah E. Demirel, M. M. Faruque Hassan

(177b) High-Resolution Process Design: Flowsheet Optimization with Embedded High Fidelity Unit Models ........................................................................ 155

Richard Pattison, Michael Baldea
(189b) Chance-Constrained MINLP Optimization for the Process Synthesis of the Oxidative Coupling of Methane
(208)

(190g) Advances in DEM Computing Which Improve Predictive Capability for Processes
Howard Stamo, Aditya Vanarase, Preetanshu Pandey, Rahul Bharadwaj, Martin Hack, Lucilla Almeida, Leon W Nogueira
(216)

(245e) Travelling Traders’ Exchange Problem: Stochastic Simulation and Sensitivity Analysis
Chunbing Huang, Patrick Piccione, Federica Cattani, Federico Galvanin
(218)

(245j) Population Interaction Based on Occupation: Agriculturists and Industrialists
Babita Verma, S. Pushpavanam
(220)

(190i) Current-Driven Dynamics of Single-Layer Epitaxial Islands on Crystalline Conducting Substrates
Ashish Kumar, Dwaitan Dasgupta, Dimitrios Maroudas
(221)

(245l) Nonlinearity Analysis of Periodically Forced Bioreactors
Chi Zhai, Ahmet Palazoglu, Wei Sun, Zengtli Du
(229)

(190k) Mesoscale Effects in Heat Conduction through Crystalline Solids
Joel Christenson, Ronald J. Phillips, Robert L. Powell
(233)

(245m) Computational Approaches in Systems Modelling for Environmental Impacts of Industries: Automating Physical Input-Output Tables (PIOTs) Via Process Modelling
Elizabeth Wachs, Shweta Singh
(241)

(246a) A Kinetic Model of Lignin Biosynthesis in Arabidopsis thaliana for Improved Biofuel Production
Nabulai Jaiou, Longyun Guo, Peng Wang, Natalia Dudareva, Qin Chapple, John A. Marfan
(237)

(245n) Nonlinearity Analysis of Periodically Forced Bioreactors
Chi Zhai, Ahmet Palazoglu, Wei Sun, Zengtli Du
(229)

(245o) A Systematic Procedure for Analysis and Modification of Nonlinear Equation Sets to Enhance Convergence and Reduce Computational Effort
Neima Brauner, Mordechai Shacham
(223)

(190l) Multivariate Data Analysis of Markers of Oxidative Stress and DNA Methylation in Children with Autism
Spectrum Disorder
(227)

(245p) A Kinetic Model of Lignin Biosynthesis in Arabidopsis thaliana for Improved Biofuel Production
Nabulai Jaiou, Longyun Guo, Peng Wang, Natalia Dudareva, Qin Chapple, John A. Marfan
(237)

(245q) Convenient Prediction of Steady State Multiplicity Patterns - Multiple Autocatalytic Reactions
Satis J. Parulekar, Zhefu Que
(232)

(190m) Heterogeneous Supercomputing with Multi-Scale Modeling - Towards Virtual Reality in Process Engineering
Wei Ge
(246)

(245r) Kinetic Parameter Estimation Including Uncertainty Under Mass Transfer Limited Conditions
Timothy Yan Duane, Krijt V. Gernaey, Inmin Noppens
(236)

(245s) A Systematic Procedure for Analysis and Modification of Nonlinear Equation Sets to Enhance Convergence and Reduce Computational Effort
Neima Brauner, Mordechai Shacham
(223)

(245t) A Nonlinear Programming Framework for Estimating Spatial Coupling in Disease Transmission
Todd Zhen, Carl Laird
(234)

(245u) A Systematic Procedure for Analysis and Modification of Nonlinear Equation Sets to Enhance Convergence and Reduce Computational Effort
Neima Brauner, Mordechai Shacham
(223)

(245v) Scheduling and Purchasing Optimization for Olefin Cracking Complex
Min Chen, Qiang Xu
(235)

(245w) Health-Aware Operation of a Subsea Gas Compression Station Under Uncertain Operating Conditions
Adriaen Verheyleweghen, Johannes Jäschke
(209)

(245x) A Systematic Procedure for Analysis and Modification of Nonlinear Equation Sets to Enhance Convergence and Reduce Computational Effort
Neima Brauner, Mordechai Shacham
(223)

(245y) Nonlinearity Analysis of Periodically Forced Bioreactors
Chi Zhai, Ahmet Palazoglu, Wei Sun, Zengtli Du
(229)

(189n) Dynamic Global Sensitivity Analysis on Wastewater Stabilization Pond Networks
M. Paz Ochoa, Yanma Estrada, Patricia M. Hoch
(211)

(190n) Heterogeneous Supercomputing with Multi-Scale Modeling - Towards Virtual Reality in Process Engineering
Wei Ge
(246)

(245z) A Systematic Procedure for Analysis and Modification of Nonlinear Equation Sets to Enhance Convergence and Reduce Computational Effort
Neima Brauner, Mordechai Shacham
(223)

(190o) Advances in DEM Computing Which Improve Predictive Capability for Processes
Howard Stamo, Aditya Vanarase, Preetanshu Pandey, Rahul Bharadwaj, Martin Hack, Lucilla Almeida, Leon W Nogueira
(216)

(245aa) A Systematic Procedure for Analysis and Modification of Nonlinear Equation Sets to Enhance Convergence and Reduce Computational Effort
Neima Brauner, Mordechai Shacham
(223)

(190p) Heterogeneous Supercomputing with Multi-Scale Modeling - Towards Virtual Reality in Process Engineering
Wei Ge
(246)

(245ab) A Systematic Procedure for Analysis and Modification of Nonlinear Equation Sets to Enhance Convergence and Reduce Computational Effort
Neima Brauner, Mordechai Shacham
(223)

(190q) Advances in DEM Computing Which Improve Predictive Capability for Processes
Howard Stamo, Aditya Vanarase, Preetanshu Pandey, Rahul Bharadwaj, Martin Hack, Lucilla Almeida, Leon W Nogueira
(216)

(245ac) A Systematic Procedure for Analysis and Modification of Nonlinear Equation Sets to Enhance Convergence and Reduce Computational Effort
Neima Brauner, Mordechai Shacham
(223)

(245ad) A Systematic Procedure for Analysis and Modification of Nonlinear Equation Sets to Enhance Convergence and Reduce Computational Effort
Neima Brauner, Mordechai Shacham
(223)
(290g) Development of a Semantically-Enabled Model-Sharing Biorefinery Platform ..............................................................346
Eirini Songkhrun, Filippos Lyshkanellis, Antonis C. Kekonis

(290b) Optimal Production of Power in a Combined Cycle from Manure Based Biogas ..........................................................347
Erick Leon, Mariano Martin

(309a) A State-Space Formulation for Autocovariance-Based Plant-Model Mismatch Estimation in Model Predictive Control .................................................................348
Jodie Simkhoff, Siyun Wang, Michael Baldea, Leo H. Chiang, Ivan Castilho, Rahul Bindlish, David Stanley

(309b) Development of an Integrated Framework for Stochastic Model Predictive Control with Moving Horizon Estimation .................................................................349
Masoud Kheradmandi, Prashant Mhashkar

(309c) Nonlinear Model Predictive Control with Explicit Performance Specification ..................................................................................350

(309d) Optimization-Based Event-Triggered Predictive Control of Process Systems with Control and Communication Constraints ........................................................................351
Da Xue, Noel H. El-Farra

(309e) Output-Feedback Predictive Control for Stochastic Nonlinear Systems ..............................................................................354

(309f) Strategies Towards the Robust Multi-Parametric Control of Continuous-Time Systems ..............................................355
Maxin Sun, Mario E. Villanueva, Benoit Chachuat, Efstratios N. Pistikopoulos

(309g) On the Moment-Based Robust MPC Formulations .................................................................................................358
Muhammad B. Sallik, Leyla Ozkan, Joberti H.A. Ludlage, Siep Weiland, Paul M.J. Van den Hof

(309h) Robust Optimization Approximation of Chance Constrained Model Predictive Control .....................................................361
Weihua Shen, Zahi Li, Ruo Huang, Fraser Forbes

(314a) Recent Advances in the BARON Project ..........................................................................................................................362
Yash Parunuk, Mustafa Kilinc, Nick Sahinidis

(314b) Using Functional Programming to Recognize Named Structure in an Optimization Problem: Application to Pooling ..................................................................................363
Francesco Caccetta, Ruth Misener

(314c) Tools and Workflows in the Design of Urban Energy Systems .........................................................................................366
Kamal Kariyan, Nilay Shah

(314d) Pyomo: Platform for Scalable Modeling and Optimization ..........................................................................................367
Yankai Cao, Jordan Salving, Kibcek Kim, Victor M. Zavala

(314e) Analytics Framework and Infrastructure - Integrating Big-Data Cloud Technologies with First-Principle Modeling ..................................................................................368
Apurva P. Samudra, Alexander B. Smith, Bijan Sayyar-Rodzori

(314f) Recent Developments in Pyomo .................................................................................................................................369
John Sirola, William E. Hart, Jean-Paul Watson

(314g) Thermodynamic Consistency-Based Validation Approach for Equation of State Methods in Process Simulators ..................................................................................................370
Seiya Hirohama, Prasad Narasimhan, Francisco Braha-Mulero, Nevin Gerek, David Black

(319a) Managing Trade-Offs Between Food, Renewable Energy and Ecosystem Services .........................................................375
Rebecca Hanes, Varsha Gopalakrishnan, Bhavik R. Bakshi

(319b) Efficient Solar Thermal Hydrogen, Electricity and Fresh Water Coproduction Process Synthesis ........................................................................................................376
Emre Gencger, Rakesh Agrawal

Nemi Vora, Apurva Shah, Vikas Khanna

(319d) Water Footprint of Hydrotreated Renewable Jet Fuel Produced through Rapeseed Rotation with Wheat and Other Crops in North Dakota ........................................378
Bai Shi, David W. Archer, Suchada Ukaeew, Kristin C. Lewis, David R. Shonnard

(319e) NexSym – A Local Nexus Simulation System .....................................................................................................................379
Elías Martín-Hernández, Melissa Leung Poh Hung, Matthew Leach, Aidong Yang

(319f) Gibbsian Game Theory for Tragedy of the Commons Problems in Food-Energy-Water Sustainability .............................................................................................................380
Darrell Velegol

(319g) Water and Energy Systems in Sustainable City Development: Agent-Based Modelling and Resource Technology Optimization ..................................................381
Xiaonan Wang, Koen H. van Dam van Dam, Charralampos Triantafyllidis, Rembrandt Koppelaar, Nilay Shah

(333a) Visualization and Analysis of Periodic Process Data ........................................................................................................382
Ray Wang, Michael Baldea, Thomas F. Edgar, Mark Nixon, Willy Wojtynisz, Ricardo Duria

(333b) Iot-Enabled Cybermanufacturing: Challenges and Possibilities ..........................................................................................383
Devvarshi Shah, Austin Hancock, Anthony Skjellum, Q. Peter He, Jin Wang

(333d) An Optimization-Based Approach for Learning Simple Parametric Surrogate Models ................................................384
Zachary Wilson, Nick Sahinidis

Geert Gins, Jun Van Impe, Marco Reis

(333f) Process Knowledge Discovery and Selecting Number of Non-Zero Loadings in Sparse Principal Component Analysis .............................................................................388
Shiriram Gajjar, Murat Kulahci, Ahmet Palazoglu

(333g) Deep Reinforcement Learning Approach for Process Control ................................................................................389
Steven Spielberg, Pon Kumar, Bhashan Gopaluni, Rohit Patwardhan, Philip Loewen
(383g) Identification of Magnetic Nanoparticles to Eradicate Cancer Cells Using the Hyperthermia Approach – A Computational Search Approach ..................................................427

Sounak Datta, Mario Richard Eden

(383h) Machine Learning and Natural Language Processing for Pharmaceutical Product Engineering ..........................................................428

Miguel Francisco Remolona, Venkat Venkatasubramanian

(390a) Algorithms for a Closed-Loop Artificial Pancreas: Challenges and Solutions Pertinent to Chemical Process Operations and Control ..........................................................429

B. Wayne Bequette, Faye Cameron, Nilay Baysal, Daniel P. Howson, Bruce Buckingham, David Maaha, Carol Levy

(390b) A Robust Hybrid Model Predictive Control Framework for Hill Curve Model-Based Systems ........................................................................430

Iona Nasticu, Richard Oberdieck, Efstratios N. Pistikopoulos

(390c) Stochastic Nonlinear Model Predictive Control Using Adaptive Polynomial Chaos: Application to an Atmospheric Pressure Plasma Jet ........................................................................431

Edward Buehler, Ali Meshah

(390d) Proportional State-Feedback Controller Design Using MPC Structure and Carleman Approximation Method .............................................................................................................432

Styliani Avraamidou, Nikolaos A. Diangelakis, Richard Oberdieck, Efstratios N. Pistikopoulos

(390e) Constrained Control Lyapunov Functions: Design and Application for Nonlinear Systems ..........................................................................................433

Tyler Homer, Prashant Mhaskar

(390f) Input-Output Paring Accounting for Both Structure and Strength in Coupling .................................................................................................................................434

Xunyuan Yin, Jinfeng Liu

(390g) Elucidating and Handling Valve-Induced Nonlinearity in Industrial Feedback Control Loops ..........................................................................................435

Helen Durand, Panagiota D. Christofides

(390h) Design and Implementation of a Biologically-Inspired Optimal Control Strategy (BIO-CS) for Advanced Energy Systems ..............................................................................436

Gaurav V. Mirlekar, Fernando V. Lima

(398a) The Mesoscopic Behavior of Stochastic SchloGl Model ..........................................................................................................................................................................................437

Michail Vlysidis, Yiannis N. Kaznessis

(398b) Reaction Network Analysis for Thin-Film Deposition Processes: Physical Interpretation of Reaction Invariants ..........................................................................................................................438

Hossein Salami, Krishnaprasath Ramakrishnan, Raymond A. Adamsitis

(398c) Inferring Gene Regulatory Networks from Single Cell Expression Data .................................................................................................................................439

Iiro Harjunkoski

(398d) Modeling for Complex Interactive Behaviors Among Enterococcus Faecalis Donor and Recipients in Biofilms ..........................................................................................................................440

Vu Tran, Arpan Bandypadhyay, Gary M. Dunny, Doraiswamy Ramkrishna, Wei-Shou Hu

(398e) Elucidating the Meaning of Alternative Optimal Solutions in Flux Balance Analysis .................................................................................................................................441

Matthew Hilliard, Q. Peter He, Jin Wang

(398f) The Impact of Resource Constraints on the Reverse Engineering of Biological Pathways .................................................................................................................................442

Qian Xu, Jia Yang, Qing Xu

(398g) Interaction Network-Based Antiviral Protein Discovery ..........................................................................................................................................................................................443

Yu Guo, Edward Sontag, Leonidas Bleris

(398h) Complex Traveling Wave Phenomena Mediated By the Coupling of Phosphorylation Cascades and Extracellular Diffusion in Cellular Populations .............................................................................444

Michal Przyb, Vladislav Nevozhaj, Igor Schreiber

(390a) Global Optimization of Crude Oil Scheduling with Discrete and Continuous-Time Formulations ..................................................................................................................................................445

Pedro M. Castro

(390b) Optimal Scheduling of a Renewable Ammonia Plant with Wind Generation Under Variable Electricity Pricing ..........................................................................................................................446

Andrew Allman, Prodromos Daoutidis

(390c) Discrete-Time Mixed-Integer Programming Models for Scheduling in Sequential Environments ..................................................................................................................................................447

Hojaae Lee, Andres F. Merchan, Christos T. Maravelias

(390d) Emission Considered Scheduling for Crude Unloading, Transferring, and Processing .................................................................................................................................448

Jialin Xu, Jian Zhang, Qiang Xu

(390e) A Game Theoretic Framework for Strategic Production Planning ..........................................................................................................................................................................................449

Philip Tominev, Vladimir Mahalec

(390f) Solution Methods for Discrete-Time Formulations for Scheduling in Multi-Stage Facilities ..................................................................................................................................................450

Andres F. Merchan, Hojaae Lee, Chistos T. Maravelias

(390g) Production Planning and Scheduling Integration through Multiparametric Bilevel Mixed-Integer Optimization ..........................................................................................................................................................451

Ioana Avaria-Mirou, Nikolaos A. Diangelakis, Richard Oberdieck, Efstratios N. Pistikopoulos

(390h) Scheduling and Internet of Things - Vision or Reality? .................................................................................................................................................................................................452

Iiro Harjunkoski

(398a) Nature in Engineering: Expanding the Engineering Design Space By Including Ecosystem Goods and Services ..................................................................................................................................................453

Bhatik R. Bakshi, Varsha Gopalakrishnan, Xinyin Liu, Rebecca Hanes, Geoffrey F. Grubb

(398b) Heat-Integrated Work Exchange Network Design .................................................................................................................................................................................................454

Sadeh Amini Rankouhi, Yinhan Huang

(398c) Discovery and Assessment of Integrated Waste Biorefinery Paths with Conventional Industry Using an Ontology Engineering Approach ..................................................................................................................................................455
