7th Australasian Congress on Applied Mechanics 2012
(ACAM 7)

Advances in Applied Mechanics Research

Adelaide, Australia
9 – 12 December 2012

Volume 1 of 2

Editors:

Andrei Kotousov
Raj Das
Stuart Wildy

ISBN: 978-1-5108-3757-7
TABLE OF CONTENTS

Welcome Letter by the ACAM 7 Chair ............................................................................................................. 8

The Origin of ACAM by Bob Randall and Raphael Grzebieta ................................................................. 9

The Legacy of ACAM by Francis Rose ....................................................................................................... 12

Organising Committee..................................................................................................................................... 13

Technical Committee....................................................................................................................................... 14

Program........................................................................................................................................................... 16

Keynote Papers.................................................................................................................................................. 18

Passive and active hydraulically interconnected suspensions and their applications........... 18
  N. Zhang, W. Smith, L. Wang
Can we really predict accurately the strength of adhesively bonded joints? .............. 39
  Professor R.D. Adams and Dr E.F. Karachalios
The mechanics and mechanisms of fracture of nano-modified polymers .................. 58
Stress-Intensity Factors and fatigue growth for surface cracks .................................. 75
  Andrea Carpinteri and Sabrina Vantadori

SESSION 1

Evolution of compliance in round bars subjected to tensile and bending fatigue cracking..... 98
  Jesús Toribio, Juan-Carlos Matos, Beatriz González and José Escuadra
The short crack anomaly in aerospace structural materials ............................................. 109
  Rhys Jones and Susan Pitt
Coupled Fracture Modes in Three-Dimensional Fracture Mechanics ......................... 119
  Andrei Kotousov, Paolo Lazzarin and Filippo Berto
Modelling the Complex Manufacturing History of a Pipework Joint, Assessment of its Through Life Creep-Fatigue and Calculation of the J-Integral using Finite Element Based Methods .... 128
  M. J. Stevens, Dr R. J. Dennis, I. J. M. Bottomley, Dr J. Wilson and Dr R.A. W. Bradford
An Investigation on rail squat prediction due to rolling contact fatigue .................... 138
  Mohammadali Farjoo, William J. T. Daniel, Paul A. Meehan

SESSION 2

Bearing fault simulation using finite element model updating and reduction techniques ...... 148
  Lav G. Deshpande, Nader M. Sawalhi and Robert B. Randall
Identification of Foundations in Rotating Machinery Using Modal Parameters ............... 155
  Minli Yu, Ningsheng Feng and Eric J. Hahn
A bearing fault classifier using Artificial Neuro-Fuzzy Inference System (ANFIS) based on statistical parameters and Daubechies wavelet transform features ........................................... 165
  Jonny Latuny and Rodney D. Entwistle
Correlation of vibration and cutting forces in thin-walled machining .......................... 175
  Majed Masmali, Huaizhong Li and Philip Mathew
Cepstrum-based operational modal analysis: regeneration of frequency response functions181
  Robert B. Randall and Wade A. Smith

SESSION 3

A Subject-Specific Model of Human Buttocks and Thighs in a Seated Posture ............ 191
  Rami M.A Al-Dirini, Matthew P. Reed, Gunther Paul and Dominic Thewlis
Finite element analysis of an implant-assisted removable partial denture with different positions of the rest arm .......................................................... 201
Reza Shamiri and Raj Das  
On the Influence of Acetabular Cup Wear and Orientation on Contact Mechanics of Dual Mobility Hip Implants ................................................................. 211

M. S. Uddin  
Develop and validate a biomechanical surrogate of the human thorax using corrugated sheets: A feasibility study .......................................................................................... 220

Narasimha Murthy Thota, Jayantha A. Eeppaarachchi, Lau KT  
Use of a damped Hertz contact model to represent head impact safety tests ................. 230

Daniel J. Searson, Robert W. G. Anderson and T. Paul Hutchinson

SESSION 4  
Effects of adherend thickness on the bond strength measurement of adhesive bonded repairs 240  
Mildred Lee, Chun H. Wang, Eudora Yeo and Madabhushi Janardhana  
Flexure analysis of composite pipes during reeling process ........................................... 250

Muhammad A. Ashraf, Evgeny V. Morozov, Krishnakumar Shankar  
Investigation on the wrinkling limit diagram of self-reinforced polypropylene woven composite at room temperature ................................................................. 259

Nima A. Zanjani, Shankar Kalyanasundaram  
Numerical investigation of the effect of temperature on the formability of a thermoplastic fibre metal laminate ......................................................................................... 267

Sivakumar Dhar Malingam, Anthony Sexton, Sudharshan Venkatesan and Shankar Kalyanasundaram

SESSION 5  
Modification of the ISO-10816 centrifugal pump vibration severity charts for use with Octave band spectral measurements .................................................................................. 276

Kristoffer K. McKee, Gareth L. Forbes, Ilyas Mazhar, Rodney Entwistle Ian Howard and Tendekai Mapeza  
Investigation of influence of technological imperfections on the dynamic behavior of the packages of the steam turbine blades ................................................................. 284

Iuliia Karachevtseva, Valery Zhovdak, Elena Pasternak and Arcady Dyskin  
Stationary points created by resonances in a chain of bilinear oscillators ....................... 295

Igor Shufrin, Arcady V. Dyskin and Elena Pasternak  
Comparison of interval method and Polynomial Chaos method for solving dynamics problem with uncertainties ................................................................................................. 306

Jinglai Wu, Zhen Luo, Nong Zhang, Yunqing Zhang, Liping Chen

SESSION 6  
Investigation of Nano-Mechanical Properties of Cartilages of Sheep Knee Joints ........ 315

Zhongxiao Peng, Meiling Wang & Ling Yin  
Effects of irradiation and non-enzymatic glycation on the fracture resistance of bovine cortical bone .............................................................................................................. 322

Lloyd Fletcher, John Codrington and Ian Parkinson  
Determination of stress field caused by microprojection arrays contacting and impacting hyperelastic layered skin ................................................................. 331

Stefano C. Meliga, Christopher Flaim, Martin Veidt, and Mark A.F. Kendall  
Parametric studies of optic chiasmal compression biomechanics using finite element modelling 341

Xiaofei Wang, Andrew Neely, Christian Lueck, Murat Tahtali, Gawn McIlwaine and Thomas Lillicrap

SESSION 7  
Investigating Mode Coupling Effects in Composites Beams with Delamination Damage .... 351

Jiawen Su, Chin Kian Liew, Martin Veidt  
Model updating based structural damage detection of transmission tower: experimental verification by a scaled-model ................................................................. 361
Jiahua Yang and Heung-Fai Lam
The low-frequency scattering of the A0 Lamb wave from delaminations in quasi-isotropic composite laminates: Theoretical and finite element studies ............................................................... 371
C.T. Ng, M. Veidt, L.R.F. Rose and C.H. Wang
Numerical investigation of the scattering of ultrasonic guided wave in hard-to-inspect regions 379
Cain Doherty and Wingkong Chiu

SESSION 8
Effect of aspect ratio variations on forming limit diagram of glass-fibre reinforced polypropylene composite at room temperature ............................................................................................. 389
Nima A. Zanjani, Shankar Kalyanasundaram
Parametric Influence and Optimization of Wire-EDM on Hot Die Steel........................................ 398
Nixon Kuruvila, H V Ravindra, Joe Elambasseril
Forming of housing by impact extrusion press using ultrafine-grained semi-solid light metal 409
Keiko Natori, Tomoaki Yashima, Yoshihiko Arao and Tatsuya Tanaka
Development of a trajectory-based 3D surface roughness model for the micro end-milling process 419
Shah M. M. Rahman and Jong-Leng Liow

SESSION 9
Non-linear peculiarities of creep in irradiated materials................................................................. 425
P. Selyshchev and V. Sugakov
Life assessment of welded joints operating within creep range....................................................... 430
Mrudul A. Pramanik and Sangarapillai Kanapathipillai
Improving structural integrity assessment of nonlinear packaging materials................................ 439
Matthew J. Lamb and Anthony J. Parker
A simple tool for simulating the growth of rail squats ................................................................. 449
D. Peng and R. Jones

SESSION 10
Gradient model of adhesion: mechanical properties and fracture of micro/nano-structured materials 459
S. Lurie, N. Tuchkova, and J. Soliaev
Origin of the implantation and annealing effects on the residual stress release in a silicon-on-sapphire system................................................................. 466
Mei Liu, Haihui Ruan and Liangchi Zhang
A note on the reliability of nanoindentation: effect of sample standing ........................................ 473
Fengzai Tang, Haihui Ruan and LC Zhang
The mechanism of nano-scale shear banding in metallic glass...................................................... 480
Weidong Liu, Haihui Ruan, Liangchi Zhang
Strength anisotropy and mixed mode fracture in cold drawn prestressing steel wires ............... 488
Jesús Toribio, Beatriz González and Juan-Carlos Matos

SESSION 11
Model updating of the rail-sleeper-ballast system and its application in ballast damage detection 497
Q. Hu and Heung F. Lam
Location and depth of delamination damage determined by an inverse method............................ 507
Shuai He, L. R. Francis Rose and Chun H. Wang
Integrating structural health monitoring into structural design .................................................... 518
Wern H. Ong and Wing K. Chiu
An experimental investigation of damaged plain-weave reinforced laminates using modal analysis 529
M. Yetmez, H. Erdogan and H. Aydin
Model updating and the detection of joint defects utilizing measured vibration data ............... 535
Heung-Fai Lam, Hua-Yi Peng, Qin Hu and Jiahua Yang
SESSION 12

Super-harmonic resonance response of a quadratically nonlinear oscillator involving time delay
Jinchen Ji and Nong Zhang
The analytical solution of contact problem about torsion of transversely isotropic elastic half-space
with an inhomogeneous coating................................................................. 555
Andrey Vasilyev, Sergey Aizikovich
Homogenisation methods in mechanics of fragmented solids and hybrid materials.............. 563
Elena Pasternak, Arcady V. Dyskin and Igor Shufrin
On the non singular higher order terms in bi-dimensional and three-dimensional engineering
applications ........................................................................................................ 574
Filippo Berto, Paolo Lazzarin and Andrei Kotousov
An assessment of two statistical models for elastic contact analysis between rough surfaces
Xiaoling Jin and Liangchi Zhang

POSTER PRESENTATION

Mini-trampoline as a human structural vibration exciter ......................................................... 594
Leonard L. Koss, Justin Rhodes and Vincent Rouillard
Probabilistic approach in fatigue of crankshaft by using Markov Chain Model....................... 604
Nik Abdullah Nik Mohamed, Salvinder Singh Karam Singh, Shakib Sharifian and Mohd Salmi Md
Noorani
An analytical – FEA approach to lifetime estimation of mining equipments ......................... 612
Cătălin Iancu and Dan Dobrotă
Extraction and application of cellulose nanofiber from waste materials ................................ 622
Hitoshi Takagi, Mohd Shahril Amin Bistamam, Antonio N. Nakagaito, and Jitendra K. Pandey
Minimising solid particle erosion in an annular cavity.......................................................... 627
Chong Y. Wong and Christopher Solnordal
Experimental study for electrochemical discharge machining (ECDM) cutting using a stratified disk
transfer ................................................................................................................. 637
Alin Nioaţă
Transient Response for Different Support of Pipes with Flowing Medium Subjected to Impulse
Loading .............................................................................................................. 646
Roslinha Mohammad, Andrei Kotousov, John Codrington
Finite Element Modelling of heat exchange in the stroke-affected brain during therapeutic hypothermia
............................................................................................................................... 657
Thomas Lillicrap, Murat Tahtalı, Andrew Neely, Christian Lueck, and Xiaofei Wang
Research on the influence of rubber waste and devulcanization technology on the characteristics of
reclaimed rubber ....................................................................................................... 668
Dan Dobrotă and Gheorghe Amza
Tailored microstructure creation of TiAl-based refractory alloys within VGF solidification .... 679
Andrey V. Kartavykh, Vladimir P. Ginkin and Svetlana M. Ganina
Numerical Simulation of Multicomponent Alloy Solidification .............................................. 688
V.P. Ginkin, S.M. Ganina, A.V. Kartavykh

SESSION 14

Dynamics and control of gear shifts in a two speed electric vehicle ...................................... 698
Paul D Walker, Nong Zhang, Bo Zhu and Salisa Abdul Rahman
Empirical analysis of a roll-plane hydraulically interconnected suspension system under vehicle
articulation mode ................................................................................................. 708
Holger M. Roser, Lifu Wang, Nong Zhang
Using canonical variate analysis to detect engine misfires ...................................................... 717
Ben Speijers, Dianne Hesterman, Andrew Guzzomi
Modelling and parameter estimation of an active hydraulic suspension using experimental method
Lifu Wang, Nong Zhang, and Haiping Du
SESSION 15

On the forming behaviour of woven thermoplastic composite materials .............................................. 735
Sudharshan Venkatesan and Shankar Kalyanasundaram

Detecting delamination in a composite structure using an embedded FBG – AE hybrid system745
G.C. Kahandawa, Z.M.Hafizi, J.Epaarachchi and K.T.Lau

Influence of microwave energy on mechanical strength in sugarcane .............................................. 754
Ling Yin, Parmeet Singh, Graham Brodie, Madoc Sheehan, Mohan V. Jacob

Finite element analysis of the formability of carbon fibre/PEEK composite sheets .................. 759
Sebastian Davey Raj Das, Wesley Cantwell and Shankar Kalyanasundaram

SESSION 16

Experimental study of a new solar-assisted air-conditioner for performance prediction and energy
saving ................................................................................................................................  768
V. Vakiloroaya, Q.P. Ha, and B. Samali

Research on determining the coefficient of environmental pollution produced by automatic submerged
arc welding ........................................................................................................................  778
Gheorghe Amza and Dan Dobrotă

Evaluation of experimental techniques for establishing vehicle suspension characteristics . 788
Daniel T. Ainalis, Vincent Rouillard and Michael A. Sek

Literature review of pedestrian injury severity with vehicle impact speeds and the development of
curves to predict pedestrian injury likelihood (AIS 1 to AIS 6) versus vehicle impact speeds800
Tandy W. P. Pok, Nikola Josevski, Tia L. Orton, Andreas L. Sandvik, Christopher M. Jones and
Shane A. Richardson

SESSION 17

Single-image attenuation corrections to facilitate instantaneous planar imaging of densely seeded
particle-laden flows ............................................ 808
Mei C. Cheong, Cristian H. Birzer and Timothy Lau

A review of skin friction drag reduction within the turbulent boundary layer ................. 817
F. Ghanadi, M. Arjomandi, A. C. Zander, B. S. Cazzolato

Performance analysis and optimisation of bend-twist coupled composite hydrofoils using fluid-
structure interaction ............................................. 827
Manudha T. Herath and B. Gangadhara Prusty

Turbulent wake study of NREL phase VI wind turbine in a virtual wind tunnel using Large Eddy
Simulation ......................................................... 837
Amanullah Choudhry, Jang-Oh Mo, Maziar Arjomandi and Young-Ho Lee

Experimental study of the flow structure in a vortex tube .................................................... 848
Yunpeng Xue, Maziar Arjomandi and Richard Kelso

SESSION 18

Steady flow towards a row of collinear hydraulic fractures .......................................................... 858
Aditya Khanna, Andrei Kotousov

On the residual opening of cracks with rough faces stimulated by shear slip .............. 867
Luiz Bortolan Neto and Andrei Kotousov

Development of a standard method for determining the plane strain fracture toughness of rock877
Mahinda D. Kuruppu and Takahiro Funatsu

Effect of grain bonding on the stability of a borehole drilled through low cemented formations884
S. Saeid Hashemi, Noune Melkoumian and Chaoshui Xu

A method for estimating the fracture toughness of rocks ................................................ 895
Qingyu Yao, Haihui Ruan and Liangchi Zhang

SESSION 19

Development of a rapid drop test for surface quality inspection ................................. 905
Christopher Y. Thang and Chin K. Liew
A numerical study of the impact properties of sandwich panels with different cores .......... 915

Karthik Ram Ramakrishnan, Krishna Shankar, Philippe Viot and Sandra Guerard

Testing in order to measure the protection against impact of people, manufactured items, and
table 1: all severities of shock ................................................................. 925

T. Paul Hutchinson, Robert W. G. Anderson, and Daniel J. Searson

Experimental characterisation of the formability of a thermoplastic fibre metal laminate..... 933

Anthony Sexton, Wesley Cantwell, Matthew Doolan and Shankar Kalyanasundaram

Strip buckling from side-guard contact during strip rolling........................................... 942

A. Dixon and W.Y.D. Yuen

SESSION 20

Effect of preheat temperature on the formability of carbon fibre/PEEK composites .......... 953

Sebastian Davey Raj Das, Wesley Cantwell and Shankar Kalyanasundaram

Exploring the Potential for Vacuum Assisted Oven Consolidation (VAOC) of Natural Fibre Reinforced
Thermoplastic Sheets (NFRTS) ................................................................................. 962

Syed Monis R. Kazmi, Raj Das, Krishnan Jayaraman, and Simon Bickerton

Development and performance of all bamboo-based green composites ......................... 970

Hitoshi Takagi, Antonio N. Nakagaito, Kyohei Yokota, and Goshi Takeichi

Structural composites embedded with lithium polymer batteries .................................. 977

Salah M. Shalouf, Jin Zhang, Chun H. Wang

SESSION 21

Finite element simulation of the stretch forming of annealed aluminium sheets ............... 985

Anthony Sexton, Sebastian Davey, Wesley Cantwell, Matthew Doolan and Shankar
Kalyanasundaram

Methods for determining rubber and composite materials with rubber matrix breaking resistance 992

Dan Dobrotă and Gheorghe Amza

The modification of finite element model of a coupled slab system utilizing measured modal
parameters ..................................................................................................................... 1003

Hua Y. Peng and Heung F. Lam

A new approach to the investigation of mixed lubrication in metal strip rolling.................. 1013

Mohammad N. Khan, Haihui Ruan, Liangchi Zhang, Xianming Zhao and Xiaoming Zhang

SESSION 22

Topology optimization of lightweight structures using a meshless Shepard function approximant
........................................................................................................................................ 1022

Z. Luo, Y. Wang and N. Zhang

A new multi-objective robust optimisation methodology ................................................. 1030

Jendi I. Kepple, Gangadhara B. Prusty, Garth M. K. Pearce, Donald W. Kelly and Rodney S.
Thomson

Application of extended, unscented, iterated extended and iterated unscented Kalman Filter for real-
time structural identification ......................................................................................... 1041

Mohsen Askari, Jianchun Li, Bijan Samali

Adaptive multiple forgetting factor recursive least square (AMFF-RLS) for real-time structural
identification with unknown input .................................................................................. 1052

Mohsen Askari, Jianchun Li, Bijan Samali

Session 23

Characterisation of trampoline bounce using acceleration ............................................... 1062

David Eager, Chris Chapman and Kenneth Bondoc

On chaotic interaction between product and cushioning during random vibration testing of protective
packaging for transportation ......................................................................................... 1070

Michael A. Sek

Vertical vibrations and detachments of drill bits in rotary drilling ..................................... 1080

Arcady V. Dyskin, Elena Pasternak and Igor Shufrin
Dynamic analysis of beam with multiple cracks using Transfer Matrix Method .................1091
Nik Abdullah Nik Mohamed, Sallehuddin M. Haris, Reza Alebrahim, Shakib Sharifian and
Salvinder Singh Karam Singh

Session 24

“If I record my lectures, no one will attend my class”: The Transition to Multi-Modal Delivery in Applied
Mechanics Education ........................................................................................................ 1099
Colin Kestell, Steven Grainger and Dorothy Mssingham
Teaching First Year Engineering Dynamics at a Small and Large Australian University .... 1106
Zhongxiao Peng and Nicole J. Kessissoglou
Improved student engagement in civil and mechanical engineering using a professional peer
feedback process .............................................................................................................. 1113
Craig R. Willis, Bernadette A. Foley and David G. Wilson
Finite element modelling and analysis of a filament wound spinning composite disk ..........1121
Md. Sayem Uddin, Evgeny V. Morozov and Krishna Shankar

Session 25

Plasticity-induced crack closure model for two collinear cracks in plates of arbitrary thickness1130
Donghoon Chang and Andrei Kotousov
Bending strain measurements utilising a scanning laser Doppler vibrometer ................. 1141
Stuart J. Wildy, Andrei G. Kotousov, Ben S. Cazzolato and John D. Codrington
Application of Bayesian updating to the risk analysis of aircraft structures ................. 1151
Ribelito F. Torregosa and Weiping Hu

Additional Papers

Modelling shear behaviour of EPS-sand based on elliptic-parabolic yield surfaces model. 1163
An Deng and Beibei Sun
Evaluation of existing models of FRP-to-concrete debonding failure .............................. 1170
A. Hosseini, D. Mostofinejad
Effects of suction on flow characteristics around circular cylinders based on numerical modelling
........................................................................................................................................ 1179
A. R. Kabiri- Samani and A. Jouzdani
Crack monitoring of RC beams using digital image analysis technique ......................... 1186
A. Hosseini, D. Mostofinejad and M. Hajialilue-Bonab
Application of image processing method in experimental modeling of one dimensional dam break
wave .................................................................................................................................. 1193
A. Jouzdani and A. R. Kabiri- Samani
