Keynote Speeches....................................................................................................................................................xlii
iThings 2016

Session 1: IoT Enabling Technologies

Comprehensive GPSR Routing in VANET Communications with Adaptive Beacon Interval .......................................................... 1

Jia Li, Ping Wang, and Chao Wang

Intelligent Guardrails: An IoT Application for Vehicle Traffic Congestion Reduction in Smart City .......................................................... 7

Mohammad Reza Jabbarpour, Armin Nabaei, and Houman Zarrabi

User Location Prediction by Diffusion-Type Estimation Using Location-Based SNS Check-in Data .......................................................... 14

Ken-Ichiro Nishioka, Yoshitatsu Matsuda, and Kazunori Yamaguchi

Real-Time Energy Management Optimization for Smart Household .................................................. 20

Leehter Yao, Jin-Yi Shen, and Wei Hong Lim

A Load Balance Channel Auction Mechanism in Multi-Interface Multi-Channel Wireless Mesh Networks .................................................. 27

Baohong Ma, Shibiao He, Tao Liang, Hongjuan Wang, and Wenjing Zhang

Elastic Management of Physical Spaces and Objects in Multi-Hospital Environments .................................................. 33

Rodrigo Da Rosa Righi, Gustavo Rostirolla, Cristiano André Da Costa, Murillo Goulart, and Érico Rocha

Analysis on Physical-Layer Security for Internet of Things in Ultra Dense Heterogeneous Networks .................................................. 39

Zhihao Zhong, Jianhua Peng, Kaizhi Huang, and Zhou Zhong

Session 2: IoT Networking and Communications

Performance Analysis of Split Preamble RAN Overload Control Method for Massive Access of M2M Devices in LTE Networks .................................................. 44

Ameneh Pourmoghadas, P.G. Poonacha, and Neda Khoenihay

An Enhanced Friendship-Based Routing Scheme Exploiting Regularity in an Opportunistic Network .................................................. 51

Jihyeun Yoon, Sun-Kyum Kim, Jun-Yeop Lee, and Ki-Young Jang

An Efficient Routing Protocol Based on Data Posting in an Opportunistic Network .................................................. 58

Jihyeun Yoon and Jae-Ho Choi

Supporting IoT Multi-Tenancy on Edge Devices .................................................. 66

Mayra Samaniego and Ralph Deters

Performance Analysis of Wireless Powered MIMO Communications Using Stochastic Geometry .................................................. 74

Siyuan Zhou and Chengxiang Li

3D-LSR: A New Model for Skeletal Representation and Segmentation .................................................. 80

Di Zhang, Xiaojuan Ban, Di Wu, and Hao Wang
Self-Learning Fuzzy Controller-Based Energy Management for Smart Home .........................................................................................87
Leehter Yao, Wei Hong Lim, and Chien-Chi Lai

Queueing Analysis for Delay/Disruption Tolerant Networks with Random Link Interruptions ......................................................................................................................94
Yanglong Wu and Zexue Li

Session 3: IoT Services and Applications

Research of Food Traceability Technology Based on the Internet of Things Name Service ..................................................................................................................100
Zhiqian Wang, Tian Ye, and Anping Xiong

A Smart Gateway Framework for IOT Services .................................................................................................................................107
Yann-Hang Lee and Shankar Nair

Obfuscating Software Puzzle for Denial-of-Service Attack Mitigation .................................................................................................................115
Yongdong Wu, Vivy Suhendray, Hendra Saputra, and Zhigang Zhao

A Collision Free Neighbor Discovery Protocol for Wireless Positioning Applications ..................................................................................123
Wei Liu, Xue-En Li, Yang-Gao Ou, and Bo You

I Am Joe’s Fridge: Scalable Identity in the Internet of Things .......................................................................................................................129
Prashant Anantharaman, Kartik Palani, David Nicol, and Sean W. Smith

An Improved Ant Colony Optimization and Its Application on TSP Problem ..............................................................................................136
Wei Luo, Dong Lin, and Xinxin Feng

Goldfish: In-Memory Massive Parallel Processing SQL Engine Based on Columnar Store .........................................................................................142
Jin Wang, Hancong Duan, Geyong Min, Guangqiang Ying, and Song Zheng

Session 4: IoT Industries and Technology

Novel Hybrid Scheme of Solar Energy Forecasting for Home Energy Management System .................................................................................................................150
Leether Yao and Teng-Shih Tsai

Smartphone-Based Place Profiling in a Privacy-Preserving Manner ...................................................................................................................156
Miao Lin, Manoranjan Dash, Watt Pei Yi, and Yunye Jin

Autonomous Vehicle Security: A Taxonomy of Attacks and Defences ..........................................................................................164
Vrizlynn L.L. Thing and Jiaxi Wu

Multi-Level Ultra Low-Power Mode Support Mechanisms for Wearable Device .................................................................................................171
Hyung Jun Park, Duk-Kyun Woo, Seon-Tae Kim, and Pyeong-Soo Mah

The Transreality Interaction Platform: Enabling Interaction across Physical and Virtual Reality ........................................................................................................177
Kyle A. Martin and Joseph J. Laviola Jr.

Enhancing Lightweight M2M Operations for Managing IoT Gateways ........................................................................................................187
Bilhanan Silverajan, Mert Ocak, Jaime Jiménez, and Antti Kolehmainen
Maximizing Network Coding Opportunity through Buffer Management in Wireless Networks ................................................................. 193
    Qinglong Liu, Gang Wang, Gang Feng, Yantao Guo, and Qian Yao

**Session 5: Devices, Sensing, and Networking**

A Novel Confident Information Coverage Hole Detection Algorithm in Sensor Networks .................................................. 199
    Zenghui Zou, Xianjun Deng, Lingzhi Yi, Zujun Tang, Minghua Wang, and Xueyu Gong

Improved Sparest Random Scheduling for Compressive Data Gathering under Unreliable Link in Wireless Sensor Networks .............................................. 205
    Zhijie Fei, Fang Lin, Qiang Zhang, Junying Chen, and Jiangwen Wan

A Reliable MAC Protocol for Hybrid Wireless Sensor Networks ........................................................................................................ 211
    Sijun Dou and Danpu Liu

Energy-Efficient Mobile Data Acquisition Using Opportunistic Internet of Things Gateway Services ................................................................................. 217
    Mohan Liyanage, Chii Chang, and Satish Narayana Srirama

SmartDog: Real-Time Detection of Smartphone Theft ................................................................. 223
    Shan Chang, Ting Lu, and Hui Song

Graph Based Clustering for Two-Tier Architecture in Internet of Things .......................................................................................... 229
    J. Sathish Kumar and Mukesh A. Zaveri

Can SDN Technology Be Transported to Software-Defined WSN/IoT? ...................................................................................... 234
    Thi Minh Chau Nguyen, Doan B. Hoang, and Zenon Chaczko

**Program for Special Session**

**Session 1: Intelligent IoT Advances**

Smart World of Internet of Things (IoT) and Its Security Concerns .............................................................................. 240
    Jonathan Charity Talwana and Huang Jian Hua

Research of Secure Service Composition Based on Semantic Security Policy ................................................................. 246
    He Zhengqiu, Xue Fangxia, Liu Wenfu, He Rongmao, and Xu Zhongfu

Contrasting Internet of Things and Wireless Sensor Network from a Conceptual Overview ............................................................................. 252
    Johana A. Manrique, Johan S. Rueda-Rueda, and Jesús M.T. Portocarrero

A New Outlier Detection Algorithm Based on Kernel Density Estimation for ITS ........................................................................ 258
    Yiwen Xu, Ningbin Xu, and Xinxin Feng

Automatic Ocular Disease Screening and Monitoring Using a Hybrid Cloud System ............................................................... 263
    Fengshou Yin, Beng Hai Lee, Ai Ping Yow, Ying Quan, and Damon Wing Kee Wong

WiseWare: A Device-to-Device-Based Business Process Management System for Industrial Internet of Things ................................................................. 269
    Jakob Mass, Chii Chang, and Satish Narayana Srirama
Session 2: Emerging Networking and Applications

SDGR: An SDN-Based Geographic Routing Protocol for VANET ................................................................. 276
   Xiang Ji, HuiQun Yu, GuiSheng Fan, and WenHao Fu

A Terahertz RF Selective Switch Based on Graphene ................................................................. 282
   Xiaoyuan Ma, Weijun Hong, Shufang Li, Liang Yin, and Li Deng

Secure Communication Based on a Modified RB-HARQ Protocol .................................................. 287
   Qinyu Zou, Bangning Zhang, Zhan Ye, and Daoxing Guo

Efficient and Timely Querying of Massive Trajectory Data in Internet of Vehicles ................................. 293
   Yiwen Xu, Qihao Zou, and Xinxin Feng

A Distributed Graph Database for the Data Management of IoT Systems ........................................ 299
   Kosei Ueta, Xiaoyong Xue, Yukikazu Nakamoto, and Sena Murakami

Design and Evaluation of Vibrating Footwear for Navigation Assistance to Visually Impaired People ................................................................. 305
   Qianli Xu, Tian Gan, Shue Ching Chia, Liyuan Li, Joo-Hwee Lim, and Phyoe Kyaw Kyaw

Session 3: Management and Services for IoT

An Agentified Use of the Internet of Things ........................................................................................ 311
   Joël Kwan, Yassine Gangat, Denis Payet, and Rémy Courdier

An IoT Application for Inventory Management with a Self-Adaptive Decision Model ...................... 317
   Lizong Zhang, Nawaf Alharbe, and Anthony S. Atkins

Lightweight Two-Level Session Key Management for End User Authentication in Internet of Things ......................................................................................... 323
   Zahid Mahmood, Huansheng Ning, and Ataullah Ghafoor

iHRV: Cloud-Based Mobile Heart Rate Variability Monitoring System ........................................... 328
   Jiehan Zhou, Jukka Riekki, Weishan Zhang, and Tie Qiu

The Timed Abstract State Machine Based Test Requirement Auto Generation for Embedded Systems ......................................................................................... 334
   Ruan Chenglin and Wang Jinbo

A Time-Sensitive Collaborative Filtering Model in Recommendation Systems ................................... 340
   Limei Sun, Ejike Ifeanyi Michael, Shen Wang, and Yue Li

Program for Short Paper

Session 1: Monitoring, Routing, and Industrial Applications

Lightweight Key Management Protocols for Smart Grids ........................................................................ 345
   Vivy Suhendray, Yongdong Wu, Hendra Saputra, Zhigang Zhao, and Feng Bao

Extraction, Rendering and Augmented Interaction in the Wire Assembly of Commercial Aircraft ......................................................................................... 349
   Mark Rice, Hong Huei Tay, Jamie Ng, Senthil Kumar Selvaraj, Calvin Lim, and Ellick Wu
Real-Time Vehicle Signal Lights Recognition with HDR Camera

Jian-Gang Wang, Lubing Zhou, Zhiwei Song, and Miaolong Yuan

A 2.4GHz Circular Polarization Rectenna with Harmonic Suppression for Microwave Power Transmission

Yanjie Cao, Weijun Hong, Li Deng, Shufang Li, and Liang Yin

A Novel Design of Broadband Metamaterial Absorber Based on Sine-Curved-Surface Substrates

Mi Zhou, Weijun Hong, Li Deng, Shufang Li, and Yanjie Cao

Analysis and Design of Real-Time Micro-Environment Parameter Monitoring System Based on Internet of Things

Bin Xu, Jianying Zheng, and Qing Wang

Packet Reservation Multiple Access with Cross Multi-Frames in Cognitive Capillary Machine Type Communication Networks

Show-Shiow Tzeng, Ying-Jen Lin, Li-Shiang Wei, and Feng Jyh Authur Su

Spectrum Allocation Algorithm Based on Improved Ant Colony in Cognitive Radio Networks

Zhipei Zhu, Jiangjingxian Chen, and Shibing Zhang

Session 2: Security and Privacy-Preserving Protocols

Intrusion Detection Method Based on Support Vector Machine Access of Modbus TCP Protocol

Li Deng, Yisong Peng, Cancheng Liu, Xiaoshuai Xin, and YuCen Xie

Remote Video Interception System Implemented on USRP

Yuan Zhou, Li Deng, Weijun Hong, Chen Zhang, Shufang Li, and Zhen Wang

An OPC UA Sleepy Proxy Mechanism for Wireless Field Devices

Chenggen Pu, Heng Wang, and Ping Wang

Software Security Considerations for IoT

Aki Koivu, Lauri Koivunen, Shohreh Hosseinzadeh, Samuel Laurén, Sami Hyrynsalmi, Sampsa Rauti, and Ville Leppänen

Intelligent Plant Care Hydroponic Box Using IoTtalk

Tsung-Han Wu, Chun-Hao Chang, Yun-Wei Lin, Lan-Da Van, and Yi-Bing Lin

SmartFDS: Design and Implementation of Falling Detection System on Smartphones

Xiao Li, Yufeng Wang, Qicai Zhou, and Qun Jin

An Efficient Channel Utilization Scheme for WIA-PA Industrial Wireless Networks Based on Link Skipping

Heng Wang, Lun Shao, Shuyang Xia, Ping Wang, and Min Li

Data Security and Privacy Challenges in Adopting Solutions for IOT

S. Supriya and Sagar Padaki
Session 3: Smart Devices, Sensing, and Algorithms

SEMIOT: An Architecture of Semantic Internet of Things Middleware .................................................................416
  Maxim Kolchin, Nikolay Klimov, Ivan Shilin, Danil Garayzuev, Alexey Andreev,
  and Dmitry Mouromtsev

Local Connectivity Based Boundary Detection in Wireless Sensor Networks ..........................................................420
  Rakesh Matam, Shailendra Shukla, and Gajendra Tyagi

Lightweight Data Security Model for IoT Applications: A Dynamic Key Approach ..................................................424
  Manish Kumar, Sunil Kumar, Rajat Budhiraja, M.K. Das, and Sanjeev Singh

Comparison Analysis of Classifiers for Speech under Stress ................................................................................429
  Xiao Yao, Ning Xu, Mingsheng Gao, Aiming Jiang, and Xiaofeng Liu

Blockchain as a Service for IoT ..........................................................................................................................433
  Mayra Samaniego and Ralph Deters

Adaptive Adjustment of Compressed Measurement for Energy-Efficient Data Gathering in WSNs .................................437
  ZhipengNie, Dandan Wang, Donghao Wang, Nan Wang, and Jiangwen Wan

Social-Based Broadcast in Cognitive Radio Networks: A Network Coding Perspective ...........................................441
  Xiaoxiong Zhong, Renhao Lu, and Li Li

The Internet of Vehicles Based on 5G Communications .........................................................................................445
  Damigou Kombate and Wanglina

Program for Video

Cyber-Enabled Traditional Chinese Medicine ........................................................................................................449
  Yujia Chen, Yifeng Peng, Leiqi Wang, Yuanyu Zhang, and Tao Zhu

Future Intelligent Taichi Suit ................................................................................................................................451
  Yaodong Yang, Xing Wei, Xiujun Hu, Runlin Cai, Jitong Zhao, and Ruofeng Lei

A Beautiful Story behind the Battle of Privacy ...................................................................................................453
  Tianyuan Liu, Guoyun Li, Yaozhi Zhang, and Yuqing Sun

CPSCom 2016

Session 1: Devices, Sensing, and Networking

User Occupation Aware Conditional Restricted Boltzmann Machine Based Recommendation ........................................454
  Weizhu Xie, Yuanxin Ouyang, Jingshuai Ouyang, Wenge Rong, and Zhang Xiong

Bandwidth Allocation Algorithm of IEEE802.16j Relay Network Based on Utility Optimization ....................................462
  Zhang Xinyou, Zhang Jun, and Chen Leiyi

On the Effectiveness of Packet Sampling for Early Stage Traffic Identification ........................................................468
  Lizhi Peng, Haibo Zhang, Bo Yang, Majing Su, and Yuehui Chen
An Optimized Privacy Inference Attack Based on Smartwatch Motion Sensors .......................................................474
   Jiazhu Dai, Yitong Duan, and Fenglei Yang

An Improved Message Passing Schedule of BP-Based Decoding Algorithm for LDPC Codes .........................................................480
   Jingru Dong, Hang Yin, and Sijia Wang

An Attack-Resilient Middleware Architecture for Grid Integration of Distributed Energy Resources ........................................................485
   Yifu Wu, Gihan J. Mendis, Youbiao He, Jin Wei, and Bri-Mathias Hodge

Session 2: Modeling and Control
An Infrared and Visible Image Fusion Method Based on Non-Subsampled Contourlet Transform and Joint Sparse Representation ..........................................................492
   Guiqing He, Dandan Dong, Zhaoqiang Xia, Siyuan Xing, and Yijing Wei
Packet Diversity-Based Anomaly Detection System with OCSVM and Representative Model .................................................498
   Seokjun Lee, Hyunguk Yoo, Jungtaek Seo, and Taeshik Shon
Inferring State Machine Using Hybrid Teacher ........................................................................................................504
   Hyunguk Yoo and Taeshik Shon
On the Impact of Packet Inter Arrival Time for Early Stage Traffic Identification ..........................................................510
   Wang Linlin, Lizhi Peng, Majing Su, Bo Yang, and Xiaqing Zhou
A Budget Balanced Energy Distribution Mechanism among Consumers and Prosumers in Microgrid ........................................516
   M. Nazif Faqiry and Sanjoy Das
Visual Background Recommendation for Dance Performances Using Dancer-Shared Images ..........................................................521
   Jiqing Wen, Xiaopeng Li, James She, Soochang Park, and Ming Cheung

Session 3: CPSS Data Management and Mining
A Context-Aware Scheduling Mechanism for Smartphone-Based Personal Data Collection from Multiple Wearable Devices ..........................................................528
   Ao Guo and Jianhua Ma
Wall-Content Selection in Social Media: A Revelance Feedback Scheme Based on Explicit Crowdsourcing ..........................................................534
   Klimis Ntalianis and Nicolas Tsapatsoulis
Predicting Human Mobility from Region Functions ........................................................................................................540
   Minjie Wang, Su Yang, Yi Sun, and Jun Gao
Study on WorldView-2 Image Fusion Method Based on NMF and HCS Transform ..........................................................548
   Guiqing He, Siyuan Xing, Zhaoqiang Xia, Dandan Dong, and Yijing Wei
Predicting Traffic Congestions with Global Signatures Discovered by Frequent Pattern Mining ..........................................................554
   Jun Gao, Yi Sun, Weihua Liu, and Su Yang
Program for Work-in-Progress Session

Proactive Service Discovery in Fog Computing Using Mobile Ad Hoc Social Network in Proximity ............................................................... 561
  Sander Soo, Chii Chang, and Satish Narayana Srirama

ELR-DC: An Efficient Recommendation Scheme for Location Based Social Networks .................................................. 567
  Ruheng Lv, Yufeng Wang, Qun Jin, and Jianhua Ma

Enhanced In-Network Capabilities of Information-Centric Networks for Emerging IoT Applications .................................................. 573
  Lijun Dong and Guoqiang Wang

Contrast-Improved Visual Cryptography for General Access Structure ................................................................. 578
  Xuehu Yan, Yuliang Lu, Lintao Liu, Song Wan, Wanneng Ding, and Hanlin Liu

Continuous Commissioning of Buildings: A Case Study of a Campus Building in Denmark .................................................... 584
  Elena Markoska, Muhyiddine Jradi, and Bo Nørregaard Jørgensen

Discrimination of RF Harmonics Using Classification Restricted Boltzmann Machine ............................................. 590
  Hao Li, Kwangyul Kim, and Yoan Shin

Multiple Studies Using License Plate Recognition System HD CCTV ........................................................................ 594
  Jonghoon Kim, Jungha Jin, and Keecheon Kim

Program for Cyber-Physical-Social System Special Session

A Novel Classifier - Weighted Features Cost-Sensitive SVM ................................................................................................. 598
  Ding Cheng and Min Wu

Design of Motion Capture System Based on MEMS ............................................................................................................ 604
  Xiaochen Lai, Wenzhe Shi, Xin Liu, Huawei Zhang, and Yu Zhao

A Novel and Reliable Workflow for Mobile Cloud Computing System Components Substitution .................................................. 609
  Peng Wang, Shao Hua Zhang, and Yu Cao

Location Tracking of a Single Inhabitant in Smart Home: A Discrete Event System Approach .................................................. 615
  Jiawei Wu, Min Xia, and Shaolong Shu

Optimizing Residue Number System on FPGA ................................................................................................................. 621
  Jiahe Liu, Bangtian Liu, and Haohuan Fu

Temporal Consistency Analysis of Mediation-Aided Composition of Service Processes with Relation Network .................................. 625
  Yanhua Du, Ze Yu, Benyuan Yang, and Yang Wang

Management of Machine Room in Power System Based on Intelligent Monitoring .............................................. 631
  Li Jie, Zhong Yuanhong, Song Zhongyang, Zhou Yao, Chen Tao, and Wang Kunpeng

An Approach for Safety Analysis of Cyber-Physical System Based on Model Transformation ........................................ 636
  Mingfu Tuo, Xingshe Zhou, Gang Yang, and Ning Fu
A Secure Collaborative Spectrum Sensing Strategy in Cyber-Physical Systems .................................................. 640

Hui Lin and Jia Hu

**GreenCom 2016**

**Session 1: Green Computing and Communication Technologies**

Application of Adaptive Kalman Filter in High Dynamic GNSS Signal Carrier Tracking ........................................ 646

Youmu Shi and Di Yan

List-Based Task Scheduling for Cloud Computing ........................................................................................................ 652

Muhammad Fasih Akbar, Ehsan Ullah Munir, M. Mustafa Rafique, Zaki Malik, Samee U. Khan, and Laurence T. Yang

Detecting Primary User Emulation Attacks Based on PDF-BP Algorithm in Cognitive Radio Networks ................................................................. 660

Yueyun Chen, Liuqing Yang, Shuaishuai Ma, and Xiaopan Yuan

Case Studies for Analyzing DLMS/COSEM-Based Smart Meter Vulnerabilities in Korea ........................................ 667

Seokjun Lee, Jongwan Kim, Hyunguk Yoo, and Taeshik Shon

A Noise-Resistant UWB Channel Estimation Scheme Based on Compressed Sensing ........................................ 675

Kexin Tian, Jian Li, and Deqiang Wang

Energy-Efficient Real-Time Task Allocation in a Data Center ........................................................................................... 680

Mingming Zhang, Songyun Wang, Guoquan Yuan, Yefei Li, and Zhuzhong Qian

**Session 2: Energy Efficiency in Networking, Wireless Networks, and Vehicular Networks**

Joint Optimization of Beamforming and Power Allocation for Multicell Downlink Systems ........................................ 688

Nvlan Xie, Yunlong Cai, and Minjian Zhao

Analysis on the Output Characteristics of Wind Farms in Plateau and Mountain Areas ............................................. 694

Wen Xiankui, Fan Qiang, Lin Chenghui, Xiao Yong, Xu Meimei, Gu Wei, Xu Yutao, and Long Qiufeng

Energy Cost Minimization in Green Heterogeneous Cellular Networks with Wireless Backhauls ................................................................. 698

Qiang Yang, Xianjun Deng, and Bang Wang

An Energy Efficient Confident Information Coverage Hole Healing Algorithm in Hybrid Sensor Networks ................................................................. 705

Zujun Tang, Xianjun Deng, Lingzhi Yi, and Bang Wang

Hybrid Parity-Check and CRC Aided SCL Decoding for Polar Codes ........................................................................ 711

Qingping Yu, Zhiping Shi, Qinhuai Yan, and Zhongpei Zhang

iCPBBOCO: A Combination Evaluation Algorithm Based on the Extensional BBO ........................................... 717

Kai Shi, Huiqun Yu, GuiSheng Fan, and Fei Luo

Optimizing Energy Efficiency and Quality of Service in Large Scale Web Server Environments ................................................................. 724

Simon Kiertscher and Bettina Schnor
## Program for GreenCom Special Session

OPC Communication Protection Method Based on Access Control and Anomaly Traffic Detection ................................................................. 732  
**Yawen Guo, Chao Cheng, Xiaoshuai Xin, and Yucen Xie**

Adaptive Tile Parallelization for Fast Video Encoding in HEVC .................................................................................................................. 738  
**Maria Koziri, Panos K. Papadopoulos, Nikos Tziritas, Antonios N. Dadaliaris, Thanasis Loukopoulos, Samee U. Khan, and Cheng-Zhong Xu**

A CORDIC with Unified Rotation Strategy ................................................................................................................................. 744  
**Siyang Wang, Jia Yu, Kui-Ting Chen, and Takaaki Baba**

Stereoscopic Image Quality Assessment Based on Cyclopean Image ................................................................................................. 750  
**Kaixuan Lu and Xingang Liu**

The Communication Analysis of Implementation in Breadth First Search Algorithm .................................................................................. 754  
**Yichun Sun, Xiaodong Yi, and Hengzhu Liu**

Weighted Energy Detection Receivers for NC-UWB Green Communications Using Parameter Optimized Improved Normalized LMS Algorithm .................................................................................................................. 760  
**Danli Liu, Lâning Ma, Zhonghua Liang, and Peipei Li**

User Association Based Cooperative Energy-Saving Mechanism in Heterogeneous 5G Access Networks ................................................................................................................................. 765  
**Fei Zheng, Wenjing Li, Peng Yu, and Luoming Meng**

GPSF: General-Purpose Scheduling Framework for Container Based on Cloud Environment ................................................................................................................................. 769  
**Sungmin Choi, Rohyoung Myung, Heeseok Choi, Kwangsik Chung, Joonmin Gil, and Heonchang Yu**

Feature-Oriented Domain Analysis Framework for Energy-Aware Self-Adaptive Software ................................................................................................................................. 773  
**C. Marimuthu and K. Chandrasekaran**

## SmartData 2016

### Session 1: Big Data Applications

Network Public Comments Sentiment Analysis Based on Multilayer Convolutional Neural Network ................................................................................................................................. 777  
**Ming Jiang, Liqiang Jin, Feiwei Qin, Min Zhang, and Ziyan Li**

Cyber Security Situational Awareness .................................................................................................................................................. 782  
**Huaglory Tianfield**

Malicious Application Dynamic Detection in Real-Time API Analysis ................................................................................................................................. 788  
**Shiting Xu, Xinyu Ma, Yuandong Liu, and Qiang Sheng**

CSV-X: A Linked Data Enabled Schema Language, Model, and Processing Engine for Non-Uniform CSV .................................................................................................................................................. 795  
**Wirawit Chaochaisit, Ken Sakamura, Noboru Koshizuka, and Masahiro Bessho**
Stereo Matching Based on Edge-Aware T-MST .................................................................805
Dan Zhou and Jiying Zhao

Watermarking Based Quality Assessment for DIBR 3D Images .................................................810
Lei Chen and Jiying Zhao

Session 2: Machine Learning Algorithms over Big Data

Deep Learning Based Link Prediction with Social Pattern and External Attribute
Knowledge in Bibliographic Networks .........................................................................................815
Chuanting Zhang, Haixia Zhang, Dongfeng Yuan, and Minggao Zhang

Real Time Failure Prediction of Load Balancers and Firewalls .................................................822
Tamoghna Ghosh, Dipanjan Sarkar, Tushar Sharma, Ashok Desai, and Raghav Bali

Improved Prediction of Dengue Outbreak Using the Delay Permutation Entropy ..................828
Guohun Zhu, Jane Hunter, and Ying Jiang

Wavelet-Based Stacked Denoising Autoencoders for Cell Phone Base Station User Number Prediction ................................................................................................................................................833
Jing Li, Jingyuan Wang, and Zhang Xiong

Control-Flow Checking Using Branch Sequence Signatures .....................................................839
Liping Liu, Linlin Ci, Wei Liu, and ChengBin

Shapelets and Parallel Coordinates Based Automated Query Generation for Complex Event Processing ...............................................................................................................................................846

Session 3: Drill Smart Data from Big Data

Estimate of Public Environment-Emotional Index Based on Micro-Blog Data ..........................854
Guyuan Chen, Chao Wang, Fuqiang Liu, Feng Wang, Shun Li, and Mingxiang Huang

From Big Data to Smart Data with the K-Nearest Neighbours Algorithm ..................................859
Isaac Triguero, Jesús Maillo, Julián Luengo, Salvador García, and Francisco Herrera

Control Spare Parts Inventory Obsolescence by Predictive Modelling ......................................865
Madhu Babu Cherukuri and Tamoghna Ghosh

A Novel Method of Fault Detection for Solenoid Valves Based on Vibration Signal Measurement ........................................................................................................................................870
Haifeng Guo, Kai Wang, He Cui, Aidong Xu, and Jin Jiang

A Fast Coding Unit Size Decision Algorithm for HEVC Intra Coding Based on Image Complexity ........................................................................................................................................874
Deyuan Liu, Xingang Liu, and Yayong Li
Session 4: Deep Learning Models, Architectures, and Algorithms for Big Data

Time Division Multiplexing Elastic Waveband Switching Algorithm Using Markov Data
Prediction .....................................................................................................................................................................878
   Meng Fanbo, Sun Yuyang, Gong Xiaoxue, Yang Yitong, and Hou Weigang

A System Design for Driving Behavior Analysis and Assessment .................................................................882
   Jiayin Cen, Zhuowen Wang, Chao Wang, and Fuqiang Liu

A Reliable Big Data Transmission Algorithm for Space Information Network .................................................888
   Rong Geng, Xiaojie Wang, and Ning Ye

Fast Online-Learning Parameters Decision Algorithm Based on Bayesian Decision Rule
for 3D-HEVC ............................................................................................................................................................894
   Yayong Li, Xingang Liu, Tao Yu, Yongyong Mei, and Peicheng Wang

An Efficient Eye Localization Method Based on Geometrical Approach and SUSAN
Operator .....................................................................................................................................................................899
   Zehua Lan and Yingdong Mu

Research on MapReduce-Based Fuzzy Associative Classifier for Big Probabilistic
Numerical Data ..........................................................................................................................................................903
   Bin Pei, Fenmei Wang, and Xiuzhen Wang

Author Index
