# TABLE OF CONTENTS

## VOLUME 1

### STG 03, STG 02: OFFSHORE COATING TECHNOLOGY SYMPOSIUM

- Evaluating Corrosion Under Protective Coatings for Steel in Marine Environments ................................................................. 1
  - James Ellor
- Accelerated Offshore Coating Performance Testing .................................................................................................................. 16
  - Benjamin Chang
- Navigating the Issues Offshore ...................................................................................................................................................... 25
  - Michael Yee
- Ultra Tolerant Coating Technology: The 15 Years Path From Maintenance to New Construction .............................................. 35
  - João Salvador Azevedo
- Effect of Water Soluble Salts Affecting Long-Term Durability of Carbon Steel Coated with Epoxy Paint ................................. 50
  - Chuljung Kim
- Assessing the Influence of Coating Thickness on its Mechanically Induced Loss of Integrity ...................................................... 59
  - Shyama Ranade
- New Developments in Coatings for Extended Lifetime for Offshore Wind Structures .............................................................. 68
  - Claus Erik Weinell
- Repair Coatings for TSA .............................................................................................................................................................. 81
  - Ole Knudsen
- Epoxy High Temperature Coatings and Considerations ............................................................................................................... 95
  - Muni Ramakrishnan
- Superhydrophobic Coatings and Oil and Water Separation ...................................................................................................... 101
  - Rogelberto Avincula
- Are Drill Pipe Conventional Coatings Suitable for Subsea Early Production Risers? ................................................................. 108
  - Rodrigo Barreto
- The Effect of a Cleaning Additive in Conjunction with Waterjetting of Abrasive Blasting for Offshore Coating Maintenance .............................................................................................................................. 122
  - Jerry Woodson
- MIC-Resistant HDPE Lining for Seawater Applications ........................................................................................................... 135
  - Emily Hunt

### STG 03: ADVANCES IN CUI TECHNOLOGIES

- Understanding Insulation Chemistry Proven to Inhibit Corrosion Under Insulation (CUI) ...................................................... 146
  - David Shong
- Cyclic CUI Testing of Insulation Materials ................................................................................................................................. 152
  - Soeren Rasmussen
- Spread of Corrosion Assessment on Flexible Elastomeric Insulation Systems in a Continuous Salt-Water Spray Environment .............................................................................................................................. 161
  - Luis Mario Rodriguez
- Comparison of Insulation Materials and Their Roles in Corrosion Under Insulation .............................................................. 175
  - Thunyalok Pujanabuntoeng
- Performance of Three Types of Coatings in a Simulated Corrosion Under Insulation Condition .............................................. 189
  - Junki Miyashita
- Performance of Next Generation CUI Mitigation Systems ........................................................................................................ 200
  - Neil Wilds

### STG 05: AC INTERFERENCE, AC INDUCED CORROSION, INDUCED AC RISK ASSESSMENT, MONITORING AND MITIGATION

- The Evolution of AC Predictive and Mitigation Software .......................................................................................................... 212
  - John Dabkowski
- Case Study of AC interference on an Urban Gas Pipeline: Field Test, AC Mitigation Design and Assessment .............................. 225
  - Jamey Hilleary
- Researches on AC Corrosion Risk Assessment Criteria for Cathodically Protected Carbon Steel .......................................... 236
  - Yanxia Du
- Calculating and Tracking Soil Resistivity Change in High AC Corridors .................................................................................. 249
  - Dale Lindemuth
- Challenges in Mitigating AC Interference in Remote Areas ....................................................................................................... 255
  - Malvin Lak
- Challenging AC Corrosion Mitigation System for 100-Mile Long Pipeline ............................................................................... 266
  - Meng Lopez-Garrity
- Prioritization of Potential HVAC Interference on a 6,000 Mile Transmission Pipeline System .................................................. 281
  - Meng Lopez-Garrity

### STG 04: OFFSHORE COATING TECHNOLOGY SYMPOSIUM

- Maintenance of Offshore Coatings for Enhanced Performance .................................................................................................. 300
  - Muni Ramakrishnan
Effect of Chemical Environment and pH on AC Corrosion of Cathodically Protected Structures ................................................. 295
Andreas Janker-Holst

The AC Close Interval Survey and Other Common AC Measurement Errors .............................................................. 309
Wolfgang Fietsch

AC Interference and Mitigation: Heartland Case Study ............................................................................................................. 323
Matthew Lechelt

Review of Recent Developments in Induced AC Current Corrosion Mitigation Design, Materials, Installation and Monitoring Technologies .................................................................................................................. 331
Todd Sirota

The Use of Ultrasound for Monitoring the Impact of Induced AC Corrosion on Underground Structures ...................................... 343
Rob Lesar

Effect of Transmission Pipeline Properties on Alternated Induced Voltage ............................................................................. 352
Alfonso Garcia Rojas

The Influence of Scale Formation on the AC Corrosion of API Grade X65 Pipeline Steel Under Cathodic Protection ................................................. 366
Elmira Ghanbari

STG 05: ANODIC & CATHODIC PROTECTION

Cathodic Protection Coupon Use for Buried Piping in Plant (I.E., Complex) Facilities ............................................................... 379
Douglas Gifrey

Achievement of Cathodic Protection of Buried Steel Pipelines by Either Passivity or Immunity ...................................................... 389
Fumio Kajiyama

Deep Anode Bed in a Flowing Atresian Aquifer ............................................................................................................................. 397
Dale Claassen

Inspection and Mitigation of Underground Corrosion at Anchor Shafts of Telecommunication Towers .............................................. 404
Peyman Tahirri Bonab

Modeling of Multi-Pipeline Corridor CP Potential Profile with Common Cathodic Protection System ........................................... 419
Regelio De Las Casas

Pipeline New Construction Challenges ...................................................................................................................................... 428
Eric Langelund

Methodology to Estimate Edge Effect on Direct Current Cathodic Protection Coupons .......................................................... 435
Pavan Shukla

In Defense of the Monolithic Isolation Joint ................................................................................................................................. 444
Michael Monica

Combined Cathodic and Anodic Interference on a Pipeline - Detection, Analysis and Mitigation of Corrosion Risk ......................... 462
Rituraj Mishra

Protection of Deep Sea Steel Structures Using Thermally Sprayed Aluminium ............................................................................ 469
Shiladitya Paul

Influence of Anodic Current on Corrosion Protection Conditions of Buried Steel Pipeline Under Cathodic Protection ........................... 480
Ranjuqi Nang

High Voltage Direct Current Interference on Buried Pipelines: Case Study and Mitigation Design .................................................. 488
Yanzhi Qin

Retrofit and Management of Water Pipelines with Cathodic Protection: Case Studies ............................................................... 499
Mehrdad Akhoondan

Use of Corrosion Rate Probes to Evaluate Pipeline Cathodic Protection Performance ........................................................................... 508
Vera Kusto

Dealing with Pipelines Positive Potential - A Case of Study ........................................................................................................... 519
Javier Montanez Villamizar

Assessment of Effects of Cavities and Narrow Channels on CP Design in the Marine Environment .................................................. 534
Tim Froome

Can an Intermittent Cathodic Protection System Prevent Corrosion of Buried Pipeline? ............................................................... 546
Marco Ormellese

Cathodic Protection of Stainless Steel 316L Rotating Screens on Seawater Intake Structures .......................................................... 557
John Sierks

Effect of Trench Breaker Foams on Pipeline Cathodic Protection ...................................................................................................... 573
Sujay Math

Automated Cathodic Protection Waveform Analysis ........................................................................................................................ 585
William Mott

Challenges in Providing Effective Cathodic Protection to Thermally Insulated Pipeline Risers ......................................................... 596
Stephen Gilson

Chemical and Electrical Stability of Reference Electrodes in Sand Bed Dosed with Volatile Corrosion Inhibitors ............................ 604
Pavan Shukla

Optimization of CP Design with Consideration of Temperature Variation for Offshore Structure .................................................. 612
Min Sung Hong
STG 08: CORROSION MANAGEMENT, PLANNING, DEVELOPMENT, IMPLEMENTATION & SUCCESS

Combining CP System and Pressure Monitoring at Gas Storage Fields Using Wireless Networked Systems ................................................. 624
James Hiley

Developing a Life-Cycle Cost Analysis Framework to Evaluate the Cost-Effectiveness of Hydroelectric .................................................. 633
Bobbi Jo Merten

CFD-based Prediction of Flow Induced Corrosion ................................................................................................................................. 648
Ashwini Chandra

Assessing and Sharing Success: Comparing Program-wide Corrosion Engineering Service Benefits Against Individual Project Design Packages .................................................................................................................... 663
Jeffry Giddings

Corrosion Looping for Down Stream Petroleum Plants: An Enigma for RBI Engineers, A Perspective From the Review of Mechanical Integrity Systems ................................................................................................................................. 675
Muazu Mohammed

Heat Exchanger Failure Case Study: Understanding the Total Cost of a Corrosion Issue in the Oil and Gas Industry ........................................................................................................................................................................ 685
Laura Cardenas

Review of Recommended Practices for Removal of Hydrogen Through Bakeout for Welded Repairs .................................................. 695
Mark Sadowski

Corrosion Management Planning Lessons for Seawater Conveyance in Mining .......................................................................................... 711
Zoe Coull

Risk Based Approach to Integrated Asset Corrosion Management in the Oil and Gas Industry ....................................................................... 719
Joseph Akanni

STG 11: WATER TREATMENT VS. THE ECONOMICS ASSOCIATED RISK AND RELIABILITY

Monitoring, Evaluating, and Control of Corrosion and Scaling in Higher Pressure Industrial Boiler Systems ............................................... 729
John Kelly

VOLUME 2

Corrosion Protection Enhancement by the Use of Polymers .......................................................................................................................... 744

Inhibitory Activity of Biopolymers, Synthetic Polymers, and Phosphonates Against the Formation of Calcium Phosphate Scale in Cooling Water Systems .................................................................................................. 759
George Nicolas

Kinetic and Morphological Investigation of Calcium Sulfate Dihydrate (Gypsum) Scale Formation on Heat Exchanger Surfaces in the Presence of Inhibitors .................................................................................................. 772
Zahid Amjad

Modeling Lead and Copper Corrosion and Solubility in Municipal Water Distribution Systems .................................................................. 787
Robert Ferguson

PBTC Revisited .......................................................................................................................................................................................... 799
Robert Ferguson

Failures of Brass Components in Water and Steam Systems ..................................................................................................................... 814
James Dillon

The Facts and a Few Urban Legends Too Around Flow-accelerated Corrosion .............................................................................................. 842
Luis Carvalho

A Phosphorous-Free Alternative for Corrosion Control ............................................................................................................................. 849
Eric Ward

An Integrated Approach to Optimizing Corrosion Control for Refinery Process and Boiler Systems ................................................................ 864
Gregg Robinson

The Case Against Galvanized Piping in Domestic Water Systems ........................................................................................................... 878
Catherine Noble

Extended Understanding of Inhibition Mechanism of New Corrosion Inhibitor via Electrochemical Measurements and X-Ray Photoelectron Spectroscopy (XPS) .............................................................................................................. 890
Mary Jane Felipe

Stressed Alkaline Cooling Water Deposit Control: High Temperature, Suspended Solids, and Iron Impacts ................................................................................. 900
Libardo Perez

DNA Based Diversity Analysis of Microorganisms in Industrial Cooling Towers ...................................................................................... 909
Liina Wang

Qualification and Application of Ultrasonic Technology for Power Plant Component Fouling Control .................................................................. 921
Charles Marks

New Yellow Metal Corrosion Inhibitors Targeting Surface Chemistry of Industrial Systems ........................................................................ 936
Paul Frail
STG 30: OIL AND GAS PRODUCTION – CATHODIC PROTECTION

Distributed Sacrificial Cathodic Protection – A New Cost Effective Solution to Prevent Corrosion on Subsea Structures ................................................................. 949
Ray Johnson

Strategy and Results of an Impressed Current Cathodic Protection Retrofit in the North Sea ................................................................. 964
Alex Delviche

Impact of Foam Trench Breakers and Ditch Pads on Pipeline Cathodic Protection ................................................................. 972
James Ellor

Compatibility Analysis of Regional CP System and Electrical Grounding System in Oil/Gas Stations ................................................................. 988
Luong Dong

STG 32: ADVANCES IN MATERIALS FOR OIL AND GAS PRODUCTION

Fitness-for-Purpose HIC Testing of Heavy Wall Large-Diameter Pipes for Mildly Sour Applications in the New NACE TM0284-2016 Solution C ................................................................................................................................. 1001
Thomas Haase

Materials and Corrosion Risk Mitigation Associated with Flowback of Acid Stimulation Fluids ................................................................. 1014
Sandra Hernandez

Development of Sucker Rods for Aggressive Environments ................................................................................................................................. 1029
Teresa Perez

New Axially-Loaded Full Ring Test Method for Assessment of Susceptibility of Girth Welds and Parent Pipe to Sour Service Cracking ................................................................................................................................. 1041
Philip Dent

Effective Inorganic Salt Corrosion Inhibitors for Titanium Components Exposed to Dilute Hydrofluoric Acid Well Stimulation Fluids ................................................................................................................................. 1054
Ronald Schutz

Study of High Strength Low Alloy Steel OCTG with High Carbon Contents for Mildly Sour Service ................................................................. 1067
Yuki Arai

Jutta Kloewer

Optimization of Side-Groove Configuration On DCB Test ................................................................................................................................. 1094
Jun Nakamura

Sulfide Stress Cracking Fracture Toughness of 125 ksi Grade in Mild Sour Service Conditions ................................................................................................................................. 1106
Florian Thebault

Long-Term Performance of HLP Solution for Mildly Sour HIC Testing ................................................................................................................................. 1113
Daisuke Mizuno

Fatigue Crack Growth Rate Behavior of Welded Line Pipe Steel in Sour Environments ................................................................................................................................. 1124
Thodia Ramgopal

Zinc-Nickel Nanolaminate – Advanced Coating for Bolt Corrosion Control ................................................................................................................................. 1136
Michael Joosten

Assessment of the Operating Window of 13Cr4Ni11Mo 110 ksi Well Tubulars in a Mild Sour Gas Environment ................................................................................................................................. 1151
Pedro Rincon

Study on Effect of Buffer Capacity on Corrosion Performance of CRAs in Simulated Well Condition ................................................................................................................................. 1166
Masayuki Sagara

Choice of Buffer Solution for Stainless Steel OCTG at Laboratory Corrosion Test to Carry Out SSC and SCC Resistance ................................................................................................................................. 1180
Yasuhide Ishiguro

Corrosion Resistance of Large Components Produced from AF932N High Nitrogen Stainless Steel Ingots ................................................................................................................................. 1195
Carlo Malara

Critical Factors Affecting the Pitting Corrosion Resistance of Additively Manufactured Ni-based Alloy in Chloride Containing Environments ................................................................................................................................. 1205
Helmuth Sarmiento Klapper

Role of H2S In Localized Corrosion and Cracking of CRAs in Upstream Oil and Gas Applications ................................................................................................................................. 1213
Gareth Hinds

Corrosion Risk Evaluation of Duplex Stainless Steel UNS S82551 in Treated Seawater Injection Well Service ................................................................................................................................. 1225
Perry Nice

Effect of Cold Deformation on Sulfide Stress Cracking of High Strength Steels ................................................................................................................................. 1240
Maria José Cancio

Alignment of Critical Experimental Parameters of Well Stimulation and Scale Dissolver Chemicals Corrosion Testing ................................................................................................................................. 1254
Luciana Intioso

Sulfide Stress Cracking (SSC) Resistance of AISI 420 Modified (13Cr) Martensitic Stainless Steel Bar Stock ................................................................................................................................. 1265
Karthik Krishnan

The Effect of Hydrogen on Plain and Notched Test Specimens of PH Nickel Alloys ................................................................................................................................. 1277
Stephen McCoy

Additive Manufacturing for Sour Service: an Experimental Investigation ................................................................................................................................. 1287
William Kovacs
Problems Related to the Slow Strain Rate Test Performance and the Specimen Characterization in Austenitic Corrosion Resistant Alloy Tubes ................................................................. Pilar Esteban 1302

SSC Resistance of a Double Quench and Tempered T-95 Casing in Extremely Sour and High Pressure Environment .................................................. Wei Ji Huang 1317

STG 33: NONMETALLIC MATERIALS FOR OIL AND GAS

Economically Mitigating Downhole Corrosion and Wear Failures with Thermoplastic Liners ................................................................. Robert Davis 1331

Assessment of Anticorrosion/Antifouling Performances of a Novel Hybrid Epoxy-Siliconized Coating ....................................................... Rami Saleman 1345

Cryogenic Spillage Protection (CSP) on FLNG: Improving Safety Through Standardization ............................................................. Sebastien Viale 1356

High Temperature and High Chemical Resistant Ambient Cure Tank Liner ................................................................................. Yong Zhang 1366

Internal Lining Damage Investigation of 24inch Jet Fuel Pipelines ......................................................................................... Mushaid Nauman 1381

Thin Solid Coatings for Fouling Mitigation in Heat Exchangers ......................................................................................... Seth Taylor 1395

Structural Performance of Fibre Reinforced Polymer Materials After Long Term Immersion in a Marine Subsea Environment ........................................................................ Simon Eves 1404

Testing and Design of Nonmetallic Composite Repair Systems for Pipeline Integrity ................................................................. Davie Peguero 1416

Case Study: Engineered Polyamide 12 (PA12) Pipeline Liner for Management of Sour Gas Corrosion at Elevated Temperatures ....................................................................... James Mason 1431

Non-Metallic Liners for Dense Slurry (Oil Sands) Applications ......................................................................................... Duane Serate 1446

STG 35: DIRECT ASSESSMENT

Improving the Quality of ECDA Indirect Inspection Data .................................................................................... Sorin Segall 1462

Interpretation and Selection of Direct Examination Locations with Respect to ECDA Methodology ................................................ Chukwuma Onuoha 1476

VOLUME 3

How Many Excavations are Required to Confirm the Absence of SCC on a Pipeline ................................................................. Francois Ayello 1491

ACVG or DCVG - Does it Matter? Absolutely It Does .............................................................................. Jim Walton 1501

Direct Examination Results of High Strength Versus Low Strength Steels - The Dilemma Found During Investigative Digs ........................................................................ Joseph Pikas 1514

STG 38: CORROSION CONTROL IN PULPING, PAPERMAKING & BIOMASS CONVERSION INDUSTRIES

Synchrotron Based X-Ray Fluorescence Microscopy Confirms Copper in the Corrosion Products of Metals in Contact with Treated Wood .............................................................................. Sedat Aydin Baykal 1522

Erosion-Corrosion Behavior of Steels in a Particulate-Containing Pulping Liquor Environment at Elevated Temperature ........................................................................... Bedi Aydin Baykal 1530

Pitting Behavior of Lean Duplex Stainless Steels in Thiosulfate-Containing Paper Machine Environment ........................................................................ Liang He 1543

STG 39: RECENT EXPERIMENTS WITH NICKEL, TITANIUM, ZIRCONIUM AND OTHER CORROSION RESISTANCE ALLOYS

Laboratory Testing of OCTG grades UNS N08028 and UNS N08029 ......................................................................................... Wenle He 1551

Evaluation of Explosion Clad Hybrid Nickel-Base Alloy UNS N10362 ......................................................................................... Steve Sparkowich 1569
