
Timisoara, Romania
3-7 July 2017
Table of Contents

Preface.....................................................................................................................................................................xviii
Chairs and Program Committee Members..........................................................................................................xix

Track 1. Technologies for Open Learning and Education
(i-OPENLearn@ICALT2017)

University Lecturer Views on Pedagogic Lurking ....................................................................................................1
Eva Dobozy

Research on Differences of University Students’ Communication in IM and Practical Environments: Case Study Based on Acquaintance Group ............................................................................................3
Xiaoling Ye

A Model to Assist Pedagogical Scenario Building Process in cMOOCs .................................................................5
Aicha Bakki, Lahcen Oubahssi, Sébastien George, and Chihab Cherkaoui

Affordances of the LePlanner for Sharing Digitally Enhanced Learning Scenarios .................................................8
Kai Pata, Aleksandr Beliaev, Romil Rõhtšenkov, and Mart Laanpere

Why We Need High Drop-Out Rates in MOOCs: New Evaluation and Personalization Strategies for the Quality of Open Education ........................................................................................................13
Christian M. Stracke

Ontological Learner Profile Identification for Cold Start Problem in Micro Learning Resources Delivery ........................................................................................................................................................................................................16
Geng Sun, Tingru Cui, Jun Shen, Dongming Xu, Ghassan Beydoun, and Shiping Chen

Enhancing Student Digital Skills: Adopting an Ecosystemic School Analytics Approach ........................................................................................................................................................................................................21
Stylianos Sergis, Demetrios G. Sampson, and Michail Giannakos

Using Open Education Tools for a Higher Education Virtual Campus .................................................................26
Diana Andone, Andrei Ternauciuc, and Radu Vasiu

Facilitating the Open Learning and Education through Facial Analytics and Video Streaming ........................................................................................................................................................................................................31
Vincent Tam and Mimansha Gupta
Automatic Lecture Subtitle Generation and How It Helps .................................................................34
Xiaoyin Che, Sheng Luo, Haojin Yang, and Christoph Meinel

**Track 2. Adaptive and Personalised Technology-Enhanced Learning (APTeL@ICALT2017)**

How Much Learning Support Should be Provided to Novices and Advanced Students? ....................39
Xingliang Chen, Antonija Mitrovic, and Moffat Mathews

The Use of Handwriting Input in Math Tutoring Systems: An Use Case with PAT2Math .........................44
Felipe de Morais, Ig I. Bittencourt, Seiji Isotani, and Patricia A. Jaques

Adaptive System for Language Learning .............................................................................................47
Leonardo Zilio and Cédric Fairon

MORS: A System for Recommending OERs in a MOOC .....................................................................50
Hiba Hajri, Yolaine Bourda, and Fabrice Popineau

Tracking Students’ Analytical Reasoning Using Visual Scan Paths .......................................................53
Asma Ben Khedher, Imène Jraidi, and Claude Frasson

Assessment and Error Identification of Answers to Mathematical Word Problems ...............................55
J. C. S. Kadupitiya, Surangika Ranathunga, and Gihan Dias

Evaluation of the SA-E System for Analysis of Students’ Real-Time Feedback .....................................60
Nabeela Altrabsheh, Mihaela Cocea, Sanaz Fallakakhair, and Khaldoon Dhou

Large Scale Evaluation of Learning Flow ...............................................................................................62
Tiina Lynch and Ioana Ghergulescu

Leveraging CPTs in a Bayesian Approach to Grade Open Ended Answers ............................................65
Maria De Marsico, Andrea Sterbini, and Marco Temperini

Integrating Product Line and Learning Style Approaches to Enforce Reusability and Personalization of Learning Objects ...........................................................................................................70
A. Ezzat Labib, José H. Canós, and M. Carmen Penadés

Brazilian Portuguese Cross-Cultural Adaptation and Validation of the Susceptibility to Persuasion Scale (Br-STPS) ..........................................................................................................................72
Simone S. Borges, Vinicius H. S. Durelli, Helena M. Reis, Ig Ibert Bittencourt, Riichiro Mizoguchi, and Seiji Isotani

Exploiting Agents and Artifacts Metamodel to Provide Abstraction of E-Learning Resources ...............74
Biro1 Ciloglugil and Mustafa Murat Inceoglu

CLOVeR: An Optimized Repository for Customizable Learning Objects ..................................................76
José Wallison F. da Silva, Cicely T. de Souza, and Maria de Fátima C. de Souza

Inclusive Learner Model for Adaptive Recommendations in Virtual Education ......................................79
Carolina Mejia, Sergio Gomez, Laura Mancera, and Sibylle Taveneau
Track 3. Wireless, Mobile, Pervasive and Ubiquitous Technologies for Learning (WMUTE@ICALT2017)

Designing Learning Experiences in Zoos: A Location-Based Game Development Toolkit .................................................................84
  Terje Väljataga, Priit Tammets, Kairit Tammets, Pjotr Savitski, Kai-Mikael Jää-Aro, and Ryan Dias

Using Augmented Reality Technology for the Development of Historic Building Teaching Application: A Mackay Culture Course .............................................................................................................87
  Kai-Yi Chin, Chun-Xin Hou, Ching-Sheng Wang, and Ko-Fong Lee

Towards Proximity Tracking and Sensemaking for Supporting Teamwork and Learning ........................................................................89
  Roberto Martinez-Maldonado, Kalina Yacef, Augusto Dias Pereira dos Santos, Simon Buckingham Shum, Vanessa Echeverria, Olga C. Santos, and Mykola Pechenizkiy

Interacting with Public Displays for Informal Learning: Design Issues and First Experiences ........................................................................92
  Karl Barth and Wolfgang Müller

RefugeeScout: Learning German Culture for a Better Integration with a Storytelling Application ........................................................................95
  Teresa Walter, Stefanie Eichwald, Nina Klaas, Jennifer Reder, and Wolfgang Müller

An MQTT-Based Context-Aware Wearable Assessment Platform for Smart Watches .................................................................98
  Mohammed Al-Soh and Imran A. Zualkernan

Towards a New Ubiquitous Learning Environment Based on Blockchain Technology ........................................................................101
  Rawia Bdiwi, Cyril de Runz, Sami Faiz, and Arab Ali Cherif

Factors that Impact Quiz Score: A Study with Participants in a Mobile Learning App ........................................................................103
  Xuan Lam Pham, Thi Huyen Nguyen, and Gwo-Dong Chen

Track 4. Digital Game and Intelligent Toy Enhanced Learning (DIGITEL@ICALT2017)

Auditory and Spatial Assessment in Inattentive Children Using Smart Devices and Gesture Interaction .................................................................106
  Mauricio Loachamín-Valencia, M.-Carmen Juan, Magdalena Méndez-López, and Elena Pérez-Hernández

A 3D Serious Game for Dental Learning in Higher Education .............................................................................................................111
  David Rodríguez-Andrés, M.-Carmen Juan, Ramón Mollà, and Magdalena Méndez-López
Improve Knowledge Application Capability by Script Authoring and Comic Drama
Performing ...................................................................................................................................................... 116
  Yun-Hsuan Chang, Yu-Fang Liu, Wen-Liang Chung, Chi-Wen Huang,
  and Gwo-Dong Chen
Digital Gameplay Habits and Multiple Intelligences Profile of Early Adolescents
Living in Rural Areas ........................................................................................................................................ 119
  Veljko Aleksić and Mirjana Ivanović
Game-Based Learning Effectiveness and Motivation Study between Competitive
and Cooperative Modes .................................................................................................................................. 123
  Chang-Hsin Lin, Shu-Hsien Huang, Ju-Ling Shih, Alexandra Covaci,
  and Gheorghita Ghinea
Multimedia Technologies to Foster Ecological Skills ....................................................................................... 128
  Veronica Rossano, Teresa Roselli, and Gabriella Calvano
A Smart Educational Game to Model Personality Using Learning Analytics ........................................... 131
  Ahmed Tlili, Fathi Essalmi, Leila Jemni Ben Ayed, Mohamed Jemni, and Kinshuk
Designing a Game for Learning Math by Composing: A Finnish Primary School Case ............................. 136
  Samuli Laato, Teemu H. Laine, Jungryul Seo, Wooryeon Ko, and Erkki Sutinen
Design Thinking in App Inventor Game Design and Development: A Case Study .................................. 139
  Peng Chen and Ronghui Huang
Video Games that Improve ‘Learning to Learn’: Focus on Action Video Game Play
Elements .......................................................................................................................................................... 142
  Elena Novak and Janet Tassell
Teachers at the Heart of the Learning Games Design: The DISC Model .................................................... 145
  Mathieu Vermeulen, Gaëlle Guigon, Nadine Mandran, and Jean-Marc Labat
The Evaluation Study of Gamification Approach in Malaysian History Learning
via Mobile Game Application ........................................................................................................................ 150
  Wong Seng Yue and Chong Yee Ying
CoMBA T: Wearable Technology Based Training System for Novice Badminton
Players ............................................................................................................................................................ 153
  Ashutosh Raina, T. G. Lakshmi, and Sahana Murthy
An Investigation of the Influence of Drug Addiction on Learning Behaviors in
a Game-Based Learning Environment ......................................................................................................... 158
  Tzu-Chi Yang, Meng-Chang Chen, and Yeali S. Sun
AIMED: Agile, Integrative and Open Method for Open Educational Resources
Development .................................................................................................................................................... 163
  Rafaela V. Rocha, Pedro H. D. Valle, José C. Maldonado, Ig I. Bittencourt,
  and Seiji Isotani
The Design of Questionnaire of Students' Perceived Gender and Role of Humanoid Robots in Education ................................................................. 168

  Mojibola Abioye, Maiga Chang, Shi-Jer Lou, Ru-Chu Shih, Tzu-Chien Liu, and Fuhua Lin

FingerTrips: Learning Geography through Tangible Finger Trips into 3D Augmented Maps ................................................................. 170

  George Palaigeorgiou, Anastasios Karakostas, and Keli Skenderidou

Building a Tangible Serious Game Framework for Elementary Spatial and Geometry Concepts .................................................................................. 173

  Ahmad Hassan Kobeissi, Alessio Sidoti, Francesco Bellotti, Riccardo Berta, and Alessandro De Gloria

Towards Serious Game Content-Extraction for a Pedagogical Evaluation ................................................................. 178

  Afef Ghannem, Karim Sehaba, Raoudha Khcherif, and Henda Ben Ghezala

**Track 5. Computer Supported Collaborative Learning (CSCL@ICALT2017)**

How Collaboration in a Heterogeneous Team Impacts Invention in the Design Process of Digital Learning Objects?: The Case of the REMASCO Project to Redesign and Reinvent the Digital School Textbook through an Online and Collaborative Design Framework ................................................................. 180

  Luis Galindo

  Rustam Shadiev, Barry Lee Reynolds, Yueh-Min Huang, Narzikul Shadiev, Wei Wang, Rai Laxmisha, and Wanwisa Wannapipat

Design of Strategy for Reducing Off-Topic in Online Discussion Activities ................................................................. 184

  Sheng-Yi Wu

Is There Difference between In and Out of Classroom? Harnessing the Group Interaction of Blended Learning ................................................................. 186

  Hang Shu, Yi Wei, and Xiao-Qing Gu

The Effects of Fusing 635 Brainstorming and C-Sketch Methods on the Creativity of Industrial Design ................................................................. 189

  Chih-Chao Hsu, Tzone-I Wang, Ke-Jie Lin, and Jia-Wei Chang

Design and Trial Use of an E-Time Capsule System ................................................................. 194

  Kazuya Takemata, Takumi Nishiyama, Akiyuki Minamide, and Shintarou Wakayama

A Co-citation Network Analysis of Computer-Supported Collaborative Learning from 2006 to 2016 ................................................................. 196

  Panpan Cui, Lanqin Zheng, and Xin Li

Unlocking the Power of Word2Vec for Identifying Implicit Links ................................................................. 199

  Gabriel Gutu, Mihai Dascalu, Stefan Ruseti, Traian Rebedea, and Stefan Trausan-Matu
Intelligent Group Formation in Computer Supported Collaborative Learning Scripts ..............................................201
   Ishari Amarasinghe, Davinia Hernández-Leo, and Anders Jonsson

A Proposal to Measure Innovation and Scaling of CSCL Projects — Extension
and Application of the JRC Mapping Framework ......................................................................................................204
   Andreas Harrer and Andreas Lingnau

Designing Collaborative Learning Activities with an Augmented LD Tool ..............................................................207

Interactive Kanban — Blending Digital and Physical Resources for Collaborative
Project Based Learning ...............................................................................................................................................210
   Ioana Maria Bacea, Aurelia Ciupe, and Serban Nicolae Meza

CollAnnotator — A Support Tool for Content Analysis According to Community
of Inquiry Framework .................................................................................................................................................212
   Gabriel Badea and Elvira Popescu

Track 6. Technology-enhanced Assessment in Formal and Informal
Education (TeASSESS@ICALT2017)

Automatic Identification of Errors in Multi-step Answers to Algebra Questions ......................................................215
   Buddhiprabha Erabadda, Surangika Ranathunga, and Gihan Dias

MOOC as Supplementary Tutoring to Public School Students Learning ..................................................................220
   Erica Dal Magro, Samuel Gebing, Letícia Heinzmann, Maria Eduarda Romagna,
   Júlia Studer, Tiago Martins Goulart, Daniel Martins Ayub, Maurício Covolan Rosito,
   Júlia M. C. Silva, Hazra Imran, and Kinshuk

Competency Analytics in the Workplace through Continuous Peer Feedback .........................................................224
   Eddie Walsh, Mirjam Neelen, and Evangelos Kapros

The Potential of Learning Analytics in Understanding Students’ Engagement
with Their Assessment Feedback ...................................................................................................................................227
   Mireilla Bikanga Ada and Mark Stansfield

A Method for Thematic and Structural Visualization of Academic Content ..........................................................230
   Alexander Amigud, Joan Arnedo-Moreno, Thanasis Daradoumis,
   and Ana-Elena Guerrero-Roldan

Authentic Assessment Between Peers in Online Courses with a Large Number
of Students ....................................................................................................................................................................235
   Oscar Jerez, Nelson Baloian, and Gustavo Zurita

Automatic Assessment of Student Answers for Geometric Construction Questions ..........................................238
   Buddhimana Wijeweera, Gihan Dias, and Surangika Ranathunga

Automatic Assessment of Student Answers Consisting of Venn and Euler Diagrams ......................................243
   Diunuge Buddhika Wijesinghe, Jcs Kadupitiya, Surangika Ranathunga, and Gihan Dias

Blended Assessment Concepts for Formal and Informal Engineering Education .................................................248
   Roxana Moldovan, Bogdan Orza, Cosmin Porumb, and Serban Meza
Adapted E-Assessment System Based on Cloud Computing ................................................................. 251  
Fahima Hajjej, Youhra Bendaly Hlaoui, and Leila Jemni Ben Ayed

Incorporating Open Education Resources into Computer Supported Marking Tool to Enhance Formative Feedback Creation ........................................................................................................... 256  
Hans Jeria and Jorge Villalon

Automated Personalized Assessment of Computational Thinking MOOC Assignments ..................... 261  
Hasan M. Jamil

Track 7. Big Data in Education and Learning Analytics (BDELA@ICALT2017)

Real-Time Visual Feedback: A Study in Coding Analytics .................................................................. 264  
Jeremie Seanosky, Isabelle Guillot, David Boulanger, Rebecca Guillot, Claudia Guillot, Vivekanandan Kumar, Shawn N. Fraser, Kinshuk, Nahla Aljojo, and Asmaa Munshi

Face-to-Face Teaching Analytics: Extracting Teaching Activities from E-Book Logs via Time-Series Analysis ......................................................................................................................... 267  
Daiki Suehiro, Yuta Taniguchi, Atsushi Shimada, and Hiroaki Ogata

Estimation of Success in Collaborative Learning Based on Multimodal Learning Analytics Features .................................................................................................................. 269  
Daniel Spikol, Emanuele Ruffaldi, Lorenzo Landolfi, and Mutlu Cukurova

Real-Time Learning Analytics of e-Book Operation Logs for On-site Lecture Support ...................... 274  
Atsushi Shimada, Kousuke Mouri, and Hiroaki Ogata

An Analysis of Degree Curricula through Mining Student Records ..................................................... 276  
Vinicius Gottin, Haydee Jimenez, Anna Carolina Finamore, Marco A. Casanova, Antonio L. Furtado, and Bernardo P. Nunes

DaVID — A Model of Data Visualization for the Instructional Design .................................................. 281  
Douglas Aonso Tenorio de Menezes, Diogo Lima Florencio, Renato Ely Domingues Silva, Isabel Dillmann Nunes, Ulrich Schiel, and Marcus Salerno de Aquino

Student Modeling in Real-Time during Self-Assessment Using Stream Mining Techniques ....................... 286  
Zacharoula Papamitsiou and Anastasios A. Economides

Modelling Experts Behaviour in Q&A Communities to Predict Worthy Discussions ...................... 291  
Thiago B. Procaci, Sean W. M. Siqueira, Bernardo Pereira Nunes, and Terhi Nurmikko-Fuller

Style Analysis for Source Code Plagiarism Detection — An Analysis of a Dataset of Student Coursework .................................................................................................................. 296  
Olfat M. Mirza, Mike Joy, and Georgina Cosma

Revealing Hidden Impression Topics in Students’ Journals Based on Nonnegative Matrix Factorization ............................................................................................................................. 298  
Yuta Taniguchi, Daiki Suehiro, Atsushi Shimada, and Hiroaki Ogata
Graduate Attribute Assessment in Computer Engineering Program at University of Ottawa .......................................................... 301

Aneta George, Voicu Groza, and Liam Peyton

Using EGRA Data to Automatically Generate Teaching and Training Advice for Teachers in Developing Countries .......................................................... 303

Imran A. Zualkernan

**Track 8. Technology-Enhanced Science, Technology, Engineering and Math Education (TeSTEM@ICALT2017)**

A Pilot Study of Concept Mapping Mediated Inquiry Learning in an Online Environment .......................................................... 308

Juanjuan Chen and Minhong Wang

Teaching the Notion of Speed in Kindergarten Using the Sphero SPRK Robot .......................................................... 311

Michalis Ioannou and Tharrenos Bratitsis

Integrating GeoGebra with TPACK in Improving Pre-Service Mathematics Teachers’ Professional Development .......................................................... 313

Kaushal Kumar Bhagat, Chun-Yen Chang, and Ronghuai Huang

Scaffolding Project-Based Learning of Computer Programming in an Online Learning Environment .......................................................... 315

Jun Peng, Minhong Wang, and Demetrios Sampson

Building a Group Formation System by Using Educational Log Data .......................................................... 320

Chengjiu Yin and Noriko Uosaki

Scaffolding Spatial Thinking with Visualization and Embodiment: A 3D Multimedia Approach .......................................................... 322

Yiling Hu, Jiayu Zhu, and Bian Wu

Fake or Real? Analysis of Physical Phenomena in Viral Videos as an Inquiry Learning Activity .......................................................... 325

Sven Manske and H. Ulrich Hoppe

Managing Knowledge Diversity: Towards Automatic Semantic Group Formation .......................................................... 330

Sven Manske and H. Ulrich Hoppe

An Analysis of Content and Policies in ICT Education in Australia .......................................................... 333

Dorian Stoilescu

Final Frontier: An Educational Game on Solar System Concepts Acquisition for Primary Schools .......................................................... 335

Cristina Hava Muntean, Josephine Andrews, and Gabriel-Miro Muntean

Learning with Drones: Flying Windows for Classroom Virtual Field Trips .......................................................... 338

George Palaigeorgiou, George Malandrakis, and Christine Tsolopani

NEWTON Virtual Labs: Introduction and Teacher Perspective .......................................................... 343

Tiina Lynch and Ioana Ghergulescu
Track 9. Technology Enhanced Language Learning (TELL@ICALT2017)

Investigating the Effect of the Flipped Classroom Using E-Learning on Language Proficiency, Learner’s Autonomy, and Class Participation of English Language Learners .......................................................... 346

Michelle Siaocing Gu

The Influence of Technology-Enhanced Environment on the Progress and Participation in ESL Learning Activities among Ukrainian Preschoolers ........................................................................... 351

Olha Dalte, Jing Leng, and Xiaqing Gu

Listening Strategy Applications by Learners under the Context of Multimodality .......................................................... 354

Chia-Ling Kao, Chia-Ying Liao, and Yu-Ju Lan

A Meta-analysis of Technology Application on Language Instruction .................................................................................. 357

Mei-Mei Chang

Visualizing Characters as Images: Understanding Chinese through Internet Usage .......................................................... 359

Laxmisha Rai, Tantan Yang, Zhongtong Yue, Nongliang Sun, and Rustam Shadiev

Testing an Extensive Reading and Blogging Model Using Structural Equation Modeling .................................................................................. 362

Sy-Ying Lee

Comparing the Judgment and Accuracy of English Vocabulary Tests Relevant to Metamemory Practice .......................................................... 365

Hong Jon-Chao and Hwang Ming-Yueh

Track 10. Motivational and Affective Aspects in Technology-enhanced Learning (MA-TEL@ICALT2017)

Self-Regulator: Preliminary Research of the Effects of Supporting Time Management on Learning Behaviors .......................................................................................................................... 370

Masanori Yamada, Yoshiko Goda, Takeshi Matsuda, Yutaka Saito, Hiroshi Kato, and Hiroyuki Miyagawa

What Contributes to Chinese Adolescents’ Academic Self-Concept? — An Analysis of Social Media Influence of Peers ........................................................................................................... 373

Yan Liu and Xiaqing Gu

Emotional Data Collection Using Self-Reporting Tools in Distance Learning Courses .......................................................... 377

Élise Lavoué, Gaëlle Molinari, and Maxence Trannois

University Teachers and Technology Mentoring — Why, How and for Whom? ........................................................................... 379

Liina Lepp, Marvi Remmik, and Margus Pedaste

An Electroencephalograph-Based Method for Judging the Difficulty of a Task Given to a Learner .......................................................................................................................... 384

Katsuyuki Umezawa, Tomohiko Saito, Takashi Ishida, Makoto Nakazawa, and Shigeichi Hirasawa
Creation of a Facial Expression Corpus from EEG Signals for Learning Centered Emotions .....................................................................................................................................................................387

Zatarain-Cabada Ramón, Barrón-Estrada Maria Lucia, Leal-Hernández Daniel, and Ríos-Félix José Mario

Building a Face Expression Recognizer and a Face Expression Database for an Intelligent Tutoring System ..................................................................................................................................................................................391

Ramón Zatarain-Cabada, Maria Lucia Barrón-Estrada, Francisco González-Hernández, and Hector Rodríguez-Rangel

Sentiment Analysis in an Affective Intelligent Tutoring System ..................................................................................................................................................................................394

María Lucía Barrón-Estrada, Ramón Zatarain-Cabada, Raúl Oramas-Bustillos, and Francisco González-Hernández

Analysis of Learner Interest, QoE and EEG-Based Affective States in Multimedia Mobile Learning ..................................................................................................................................................................................398

Arghir-Nicolae Moldovan, Ioana Ghergulescu, and Cristina Hava Muntean

Track 11. Technology Enabled Learning of Thinking Skills (TELoTS@ICALT2017)

Digital Storytelling as a Framework for Inquiry-Based Museum Learning ..................................................................................................................................................................................403

Zoi Tsiviltidou and Giasemi Vavoula

Critical Thinker: Supporting Collaborative Argumentation with Structure and Awareness ..................................................................................................................................................................................406

Na Sun, Chien Wen Yuan, Mary Beth Rosson, Yu Wu, and John M. Carroll

A Digital Tool for Argumentation Construction that Assists Users in Writing Argumentative Essays ..................................................................................................................................................................................411

Yu-Fang Liu, Cheng-Yu Fan, Yun-Hsuan Chang, and Gwo-Dong Chen

FATHOM: TEL Environment to Develop Divergent and Convergent Thinking Skills in Software Design ..................................................................................................................................................................................414

Patil Deepi Reddy, Sridhar Iyer, and M. Sasikumar

A Vocal Assessment Approach to Measure Elementary School Students’ Critical Thinking Skills ..................................................................................................................................................................................419

I-Hsiu Lin, Sie Wai Chew, and Nian-Shing Chen

Learning of Micro-Macro Thinking in Analog Electronics via MIC-O-MAP TEL Environment ..................................................................................................................................................................................422

Anura Kenkre and Sahana Murthy

A System for Developing Operationalization Skills through Problem Decomposition ..................................................................................................................................................................................427

T. G. Lakshmi, Prajish Prasad, and Sridhar Iyer

A Help Management System to Support Peer Instruction in Remote Laboratories ..................................................................................................................................................................................430

Rémi Venant, Philippe Vidal, and Julien Broisin
Track 12. Recommender and Decision Support Systems for Learning (ReSyL@ICALT2017)

Dashboard for Monitoring Student Engagement in Mind Mapping Activities .......................................................... 433
  Rubiela Carrillo, Clément Renaud, Yannick Prié, and Élise Lavoué

Track 13. Technology Supported Education for People with Disabilities (TeDISABLE@ICALT2017)

aTenDerAH: A Videogame to Support e-Learning Students with ADHD .............................................................. 438
  Laura Mancera, Silvia Baldiris, Ramón Fabregat, Sergio Gomez, and Carolina Mejía

Model Playground for Autistic Children: Teaching Social Skills through Tangible Collaboration ............................................. 441
  Thais Castro, Alberto Castro, David Lima, and Pernille Bjorn

Track 14. Artificial Intelligence and Smart Learning Environments (AISLE@ICALT2017)

Investigation of Learning Behaviors and Their Effects to Learning Achievement Using Ubiquitous-Physics App .............................................................. 446
  Siska Wati Dewi Purba and Wu-Yuin Hwang

A Kinect-Based Feedback System for Improving Static Balance Ability ........................................................................ 451
  Wei Wang, Wenjing Wang, and Rustam Shadiev

Manage Learning Space to Improve Learning Experience: Case Study in Beijing Normal University on Classroom Layout ........................................................................................................ 454
  Jing Du, Xinzhu Wang, Mingyang Geng, and Ronghuai Huang

A Voice-Based Mobile System for Generating Stallings-Type Class Observations ........................................................... 457
  Salsabeel Y. Shapsough and Imran A. Zualkernan

Building Adaptive Tutoring Model Using Artificial Neural Networks and Reinforcement Learning .......................................................... 460
  Giuseppe Fenza, Francesco Orciuoli, and Demetrios G. Sampson

Smart-Learning Course Transformation for an Introductory Programming Course ......................................................... 463
  Hoda Amer and Saad Harous

Track 15. Augmented Reality and Virtual Worlds in Education and Training (VWET@ICALT2017)

ARCoins. An Augmented Reality App for Learning about Numismatics ............................................................................... 466
  M.-Carmen Juan, Mauricio Loachamín-Valencia, Immaculada Garcia-Garcia, José Manuel Melchor, and Josep Benedito

An Empirical Study of the Use of an Augmented Reality Simulator in a Face-to-Face Physics Course ......................................................... 469
  María-Blanca Ibáñez, Antonio J. de Castro, and Carlos Delgado Kloos
EBAGG: Error-Based Assistance for Gesture Guidance in Virtual Environments ........................................472
    *Florian Jeanne, Yann Souillard, Ali Oker, and Indira Thouvenin*

A Comparison between Oculus Rift and a Low-Cost Smartphone VR Headset: Immersive User Experience and Learning ..................................................................................................................477
    *Nikiforos M. Papachristos, Ioannis Vrellis, and Tassos A. Mikropoulos*

Maroon VR: A Room-Scale Physics Laboratory Experience ........................................................................482
    *Johanna Pirker, Isabel Lesjak, and Christian Guetl*

Science Education and Augmented Reality Content: The Case of the Water Circle ........................................485
    *Tharrenos Bratitsis, Pinelopi Bardanika, and Michalis Ioannou*

A Mobile Exploration Solution for Virtual Libraries in Higher Education ......................................................490
    *Catalina Malinchi, Aurelia Ciupe, Serban Meza, and Bogdan Orza*

Collaborative Learning about Augmented Reality from Technology and Business Perspectives .................................................................493
    *Mark Frydenberg and Diana Andone*

Zero-Programming Augmented Reality Authoring Tools for Educators: Status and Recommendations ..................................................496
    *Silviu Vert and Diana Andone*

**Track 16. Maker Spaces and 3-D Printing Based Innovations in Learning (Make&3DPrint@ICALT2017)**

The Influence of Live Stream and On-the-Spot Teaching on Elementary School Students in Robotics Course .................................................................................................................................499
    *Hsuan Chang, Chao-Hung Liao, and Chung-Han Yeh*

A Collaborative Learning System for Sharing 3D Models: 3D Model Co-learning Space ........................................502
    *I-Sheng Lin, Tsai-Yen Li, Fang-Chi Liang, and Yong-Teng Lin*

An Exploratory Study on the Influence of Cognitive and Affective Characteristics in Programming-Based Making Activities ..............................................................................................................507
    *Ilias O. Pappas, Sofia Papavlasopoulou, Michail N. Giannakos, and Demetrios G. Sampson*

3D Printer FABLAB for Students at POLITEHNICA University Timisoara ....................................................512
    *Mircea Dorin Vasilescu and Ioana Ionel*
Track 17. Applications of Semantic Web technologies for Learning (SW-EL@ICALT2017)

An Approach for Automatic and Dynamic Analysis of Learning Objects Repositories through Ontologies and Data Mining Techniques for Supporting Personalized Recommendation of Content in Adaptive and Intelligent Educational Systems .......................................................... 514

Fabiano A. Dorça, Vitor C. Carvalho, Miller M. Mendes, Rafael D. Araújo, Hiran N. Ferreira, and Renan G. Cattelan

An Automatic and Dynamic Knowledge Assessment Module for Adaptive Educational Systems ....................................................................................................................................................................... 517

Hiran Nonato M. Ferreira, Taffarel Brant-Ribeiro, Rafael D. Araújo, Fabiano A. Dorça, and Renan G. Cattelan

SaR-WEB: A Semantic Web Tool to Support Search as Learning Practices and Cross-Language Results on the Web ....................................................................................................................................................................... 522

Davide Taibi, Giovanni Fulantelli, Ivana Marenzi, Wolfgang Nejdl, Richard Rogers, and Asim Ijaz

Ontology-Based Model Sustaining Competence Management within Corporates: Competence Certification in CSR ....................................................................................................................................................................... 525

Ornella Malandrino and Maria Rosaria Sessa

Enrichment of the Dataset of Joint Educational Entities with the Web of Data ....................................................................................................................................................................... 528

Carla Limongelli, Matteo Lombardi, Alessandro Marani, and Davide Taibi

Doctoral Student Consortium

A Robust and Non-invasive Strategy for Preserving Academic Integrity in an Open and Distance Learning Environment ....................................................................................................................................................................... 530

Alexander Amigud, Joan Arnedo-Moreno, Thanasis Daradoumis, and Ana-Elena Guerrero-Roldan

Lean Research Culture: Measurement, Analysis, and Revitalization of Processes and Outcomes of Contemporary Research Practices ....................................................................................................................................................................... 533

Geetha Paulmani

An Investigation of the Needs on Educational Robots ....................................................................................................................................................................... 536

Ya-Wen Cheng, Pei-Chen Sun, and Nian-Shing Chen

Towards an Adaptive and Ubiquitous Learning Architecture ....................................................................................................................................................................... 539

Rafael D. Araújo, Renan G. Cattelan, and Fabiano A. Dorça

Exploring the Potential of Game-Based Learning in Massive Open Online Courses ....................................................................................................................................................................... 542

Christiane Hagedorn and Christoph Meinel

Author Index ............................................................................................................................................................ 545
