2017 European Intelligence and Security Informatics Conference (EISIC 2017)

Athens, Greece
11-13 September 2017
2017 European Intelligence and Security Informatics Conference

EISIC 2017

Table of Contents

Message from the General Chair .................................................................viii
Message from the Program Chair ...............................................................x
Organizing Committee ............................................................................xi
Program Committee .............................................................................xii
Panel Discussion ..................................................................................xiv

Regular Papers

Detecting Crime Series Based on Route Estimation and Behavioral Similarity ...........................................1
  Anton Borg, Martin Boldt, and Johan Eliasson

Period Analysis and Trend Forecast of Terrorism in SCO Region by Wavelet Transform ........................................N/A
  Ze Li, Duoyong Sun, Bo Li, and Wei Ding

An Inconvenient Truth: Algorithmic Transparency & Accountability in Criminal Intelligence Profiling .................17
  Erik T. Zouave and Thomas Marquenie

An Integrated Framework for the Timely Detection of Petty Crimes ..........................................................24
  Nikolaos Dimitriou, George Kioumourtzis, Anargyros Sideris,
  Georgios Stavropoulos, Evdoxia Taka, Nikolaos Zotos, George Leventakis,
  and Dimitrios Tzovaras

Towards a Breakthrough Speaker Identification Approach for Law Enforcement Agencies: SIIP .........................32
  Khaled Khelif, Yann Mombrun, Gerhard Backfried, Farhan Sahito,
  Luca Scarpato, Petr Motlicek, Srikanth Madikeri, Damien Kelly,
  Gideon Hazzani, and Emmanouil Chatzigiavril

Cyberbullying System Detection and Analysis ..................................................................................40
  Yee Jang Foong and Mourad Oussalah
How Analysts Think: How Do Criminal Intelligence Analysts Recognise and Manage Significant Information? .........................................................................................................47
  Celeste Groenewald, B. L. William Wong, Simon Attfield, Peter Passmore, and Neesha Kodagoda

Gender Classification with Data Independent Features in Multiple Languages .................................................................54
  Tim Isbister, Lisa Kaati, and Katie Cohen

IoT Data Profiles: The Routines of Your Life Reveals Who You Are .........................................................................................61
  Johan Fernquist, Torbjörn Fängström, and Lisa Kaati

Interpretable Probabilistic Divisive Clustering of Large Node-Attributed Networks .....................................................................................................................................................68
  Lisa Kaati and Adam Ruul

Text Mining in Unclean, Noisy or Scrambled Datasets for Digital Forensics Analytics ......................................................................................................................................................76
  Konstantinos Xylogiannopoulos, Panagiotis Karampelas, and Reda Alhaj

Detecting Periodic Subsequences in Cyber Security Data .................................................................................................................84
  Matthew Price-Williams, Nick Heard, and Melissa Turcotte

Cyber Threat Intelligence Model: An Evaluation of Taxonomies, Sharing Standards, and Ontologies within Cyber Threat Intelligence ........................................................................................................91
  Vasileios Mavroeidis and Siri Bromander

Adversarial Machine Learning in Malware Detection: Arms Race between Evasion Attack and Defense .........................................................................................................................................................99
  Lingwei Chen, Yanfang Ye, and Thirimachos Bourlai

Customs Risk Analysis through the ConTraffic Visual Analytics Tool ......................................................................................................................107
  Mikaela Poulymenopoulou and Aris Tsois

Comparative Analysis of Crime Scripts: One CCTV Footage—Twenty-One Scripts ..................................................................................................................115
  Hervé Borrion, Hashem Dehghanniri, and Yuanxi Li

Short Papers

A Statistical Method for Detecting Significant Temporal Hotspots Using LISA Statistics .....................................................................................................................................................123
  Martin Boldt and Anton Borg

Whose Hands Are in the Finnish Cookie Jar? .................................................................................................................127
  Jukka Ruohonen and Ville Leppänen

A Survey of Intelligence Analysts’ Perceptions of Analytic Tools .................................................................................................................131
  Mandeep K. Dhami

Large Scale Data Collection of Tattoo-Based Biometric Data from Social-Media Websites ......................................................................................................................135
  Michael Martin, Jeremy Dawson, and Thirimachos Bourlai
Catchem: A Browser Plugin for the Panama Papers Using Approximate String Matching
Panos Kostakos, Miika Moilanen, Arttu Niemelä, and Mourad Oussalah

Behavioural & Tempo-Spatial Knowledge Graph for Crime Matching through Graph Theory
Nadeem Qazi and B. L. William Wong

Behavioural Markers: Bridging the Gap between Art of Analysis and Science of Analytics in Criminal Intelligence
Junayed Islam and B. L. William Wong

A Framework for Measuring Imagination in Visual Analytics Systems
Michael A. Bedek, Alexander Nussbaumer, Eva-C. Hillemann, and Dietrich Albert

Author Profiling in the Wild
Lisa Kaati, Elias Lundeqvist, Amendra Shrestha, and Maria Svensson

Are We Really That Close Together? Tracing and Discussing Similarities and Differences between Greek Terrorist Groups Using Cluster Analysis
Ioanna Lekea and Panagiotis Karampelas

Poster Papers
Photometrix (TM): A Digital Seal for Offline Identity Picture Authentication
Marc M. Pic and Amine Ouddan

How the Use of Ethically Sensitive Information Helps to Identify Co-Offenders via a Purposed Privacy Scale: A Pilot Study
Pragya Paudyal, Chris Rooney, Neesha Kodagoda, B. L. William Wong, Penny Duquenoy, and Nadeem Qazi

Can an Automatic Tool Assess Risk of Radicalization Online? A Case Study on Facebook
Javier Torregrosa, Irene Gilpérez-López, Raul Lara-Cabrera, David Garriga, and David Camacho

A Monitoring Tool for Terrorism-Related Key-Players and Key-Communities in Social Media Networks
Stelios Andreadis, Ilias Gialampoukidis, George Kalpakis, Theodora Tsikrika, Symeon Papadopoulos, Stefanos Vrochidis, and Ioannis Kompatsiaris

Inter-Packet Delays Normalization to Limit IP Covert Timing Channels
Konstantin Kogos and Artem Sokolov

Terrorism Network Analysis Based on Bayesian Networks: Models and Applications
Kun Cai, Duoyong Sun, and Bo Li

Author Index
