2017 24th Asia-Pacific Software Engineering Conference
(APSEC 2017)

Nanjing, China
4-8 December 2017
2017 24th Asia-Pacific Software Engineering Conference
APSEC 2017
Table of Contents

Message from the Chairs ..........................................................................................................................xiv
Organizing Committee ..................................................................................................................................xvi
Program Committee ..................................................................................................................................xviii
Short Papers and Posters Committee ...........................................................................................................xxi
Steering Committee ..................................................................................................................................xxii

Full Papers

Program Analysis
Symbolic Execution with Value-Range Analysis for Floating-Point Exception Detection .................................................................1
   Xingming Wu, Lian Li, and Jian Zhang
Efficient Global Search for Inputs Triggering High Floating-Point Inaccuracies .................................................11
   Xin Yi, Liqian Chen, Xiaoguang Mao, and Tao Ji
A Framework for Array Invariants Synthesis in Induction-Loop Programs .................................................21
   Bin Li, Juan Zhai, Zhenhao Tang, Enyi Tang, and Jianhua Zhao

Systematic Reviews
Cultural Factors Influencing International Collaborative Software Engineering Education in China .........................................................31
   Yuqing Wang, Jouni Markkula, and Jing Jiang
Text-Mining Techniques and Tools for Systematic Literature Reviews: A Systematic Literature Review .........................................................41
   Luyi Feng, Yin Kia Chiam, and Sin Kuang Lo
A Mapping Study on Mining Software Process ...........................................................................................51
   Liming Dong, Bohan Liu, Zheng Li, Ou Wu, Muhammad Ali Babar, and Bingbing Xue
Traceability

Extracting Traceability between Predicates in Event-B Refinement ...........................................................61
  Shinnosuke Saruwatari, Fuyuki Ishikawa, Tsutomu Kobayashi,
  and Shinichi Honiden

How PHP Releases Are Adopted in the Wild? ...........................................................................................71
  Jukka Ruohonen and Ville Leppänen

An Improved Approach to Traceability Recovery Based on Word Embeddings ........................................81
  Teng Zhao, Qinghua Cao, and Qing Sun

Code Refactory & Clone

Application of LSSVM and SMOTE on Seven Open Source Projects for Predicting Refactoring at Class Level........................................................................................................90
  Lov Kumar and Ashish Sureka

CCSharp: An Efficient Three-Phase Code Clone Detector Using Modified PDGs ........................................100
  Min Wang, Pengcheng Wang, and Yun Xu

Detecting Full Initialization Points of Objects to Support Code Refactorings ...........................................110
  Girish Maskeri Rama and Raghavan Komondoor

Networks

A Cloud-Based Trust Evaluation Scheme Using a Vehicular Social Network Environment ..........................................................120
  Biling Lin, Xiao Chen, and Liangmin Wang

Noff: A Novel Extendible Parallel Library for High-Performance Network Traffic Monitoring ..........................................................130
  Yanchao Jing, Guangtao Xue, and Shiyou Qian

A Reusable Framework for Modeling and Verifying In-Vehicle Networking Systems in the Presence of CAN and FlexRay ..........................................................140
  Xiaoyun Guo, Hsin-Hung Lin, Toshiaki Aoki, and Yuki Chiba

Testing

Using Branch Frequency Spectra to Evaluate Operational Coverage ..........................................................150
  Marc Brünink and David S. Rosenblum

Cost-Effective Regression Testing Using Bloom Filters in Continuous Integration Development Environments ..........................................................160
  Jung-Hyun Kwon and In-Young Ko
A Regression Test Case Prioritization Algorithm Based on Program Changes and Method Invocation Relationship .................................................................................................................. 169

Wenhao Fu, Huiqun Yu, Guisheng Fan, Xiang Ji, and Xin Pei

**Design & Code Patterns**

A Degree-Driven Approach to Design Pattern Mining Based on Graph Matching ................................................................................................................................................... 179

Ping Zhang, Dongjin Yu, and Jiaojiao Wang

Correlation between the Frequent Use of Gang-of-Four Design Patterns and Structural Complexity ......................................................................................................................... 189

Shahid Hussain, Jacky Keung, Arif Ali Khan, and Kwabena Ebo Bennin

Method Level Text Summarization for Java Code Using Nano-Patterns ........................................................................................................................................................................... 199

Sawan Rai, Tejaswini Gaikwad, Sparshi Jain, and Atul Gupta

**Robot & Embedded Systems**

The Accompanying Behavior Model and Implementation Architecture of Autonomous Robot Software .................................................................................................................................................. 209

Shuo Yang, Xinjun Mao, Zhe Liu, Sen Yang, Jiangtao Xue, and Zixi Xu

Flexible Components for Development of Embedded Systems with GPUs ........................................................................................................................................................................... 219

Gabriel Campeanu, Jan Carlson, and Séverine Sentilles

A Dual-Loop Control Model and Software Framework for Autonomous Robot Software ........................................................................................................................................................................... 229

Zhe Liu, Xinjun Mao, and Shuo Yang

**Security & Vulnerability**

Exniffer: Learning to Prioritize Crashes by Assessing the Exploitability from Memory Dump ........................................................................................................................................................................... 239

Shubham Tripathi, Gustavo Grieco, and Sanjay Rawat

Intelligence Amplifying Loop Characterizations for Detecting Algorithmic Complexity Vulnerabilities ........................................................................................................................................................................... N/A

Payas Awadhutkar, Ganesh Ram Santhanam, Benjamin Holland, and Suresh Kothari

Modeling and Verifying Identity Authentication Security of HDFS Using CSP ........................................................................................................................................................................... 259

Chao Xu, Huihao Zhu, and Wanling Xie
Management & Decision Making
Transfer Learning for Cross-Platform Software Crowdsourcing Recommendation ..........................................................269  
  Shuhan Yan, Beijun Shen, Wenkai Mo, and Ning Li
Value-Based Decision-Making Using a Web-Based Tool: A Multiple Case Study ..........................................................279  
  Vitor Freitas, Mirko Perkusich, Emilia Mendes, Pilar Rodriguez, and Markku Oivo
A Goal-Driven Framework in Support of Knowledge Management .........................................................................................289  
  Guoping Rong, Xinbei Liu, Shenghui Gu, and Dong Shao

Software Ecosystems
Extracting Insights from the Topology of the JavaScript Package Ecosystem ........................................................................298  
  Nuttapon Lertwittayatrai, Raula Gaikovina Kula, Saya Onoue, Hideaki Hata, 
  Arnon Rungsawang, Pattara Leelaprute, and Kenichi Matsumoto
Boundary Spanners in Open Source Software Development: A Study of Python Email Archives ..................................................................................................................308  
  Pankajeshwara N. Sharma, Bastin Tony Roy Savarimuthu, and Nigel Stanger
An Empirical Study on Downstream Workarounds for Cross-Project Bugs ........................................................................318  
  Hui Ding, Wanwangying Ma, Lin Chen, Yuming Zhou, and Baowen Xu

Bug Localization & Patterns
Exploring Metadata in Bug Reports for Bug Localization ..........................................................................................328  
  Xiaofei Zhang, Yuan Yao, Yaojing Wang, Feng Xu, and Jian Lu
Improving Bug Localization with an Enhanced Convolutional Neural Network ..........................................................338  
  Yan Xiao, Jacky Keung, Qing Mi, and Kwabena E. Bennin
An Empirical Study on Real Bugs for Machine Learning Programs .........................................................................................348  
  Xiaobing Sun, Tianchi Zhou, Gengjie Li, Jiajun Hu, Hui Yang, and Bin Li

Repository Mining
Analysis of the Textual Content of Mined Open Source Usability Defect Reports ..........................................................................................358  
  Nor Shahida Mohamad Yusop, Jean-Guy Schneider, John Grundy, and Rajesh Vasa
Mining API Type Specifications for JavaScript ..................................................................................................................368  
  Shuai Wang, Wensheng Dou, Chushu Gao, Jun Wei, and Tao Huang
Mining Handover Process in Open Source Development: An Exploratory Study ........................................................................378  
  Liming Dong, Bohan Liu, Zheng Li, Bingbing Xue, Danni Chen, and Tiange Chen
Requirements

Identifying Security Requirements Based on Linguistic Analysis and Machine Learning ................................................................. 388
   Tong Li

Modeling OSEK/VDX OS Requirements in C ................................................................. 398
   Yoohee Chung, Dongwoo Kim, and Yunja Choi

An Analysis Method of Safety Requirements for Automotive Software Systems ................................................. 408
   Moe Matsubara and Mikio Aoyama

Model Checking

Domain-Specific Language Facilitates Scheduling in Model Checking ................................................................. 417
   Nhat-Hoa Tran, Yuki Chiba, and Toshiaki Aoki

Formalization and Verification of the PSTM Architecture ................................................................. 427
   Ailun Liu, Miroslav Popovic, and Huibiao Zhu

Synthesizing Pareto Optimal Decision for Autonomic Clouds Using Stochastic Games Model Checking ................................................. 436
   Azlan Ismail and Marta Kwiatkowska

Architecture

On Adequate Behavior-Based Architecture Conformance Checks ................................................................. 446
   Ana Nicolaescu, Horst Lichter, and Veit Hoffmann

From Abstract to Concrete Repairs of Model Inconsistencies: An Automated Approach ................................................................. 456
   Roland Kretschmer, Djamel Eddine Khelladi, Andreas Demuth, Roberto E. Lopez-Herrejon, and Alexander Egyed

From Monolith to Microservices: A Dataflow-Driven Approach ................................................................. 466
   Rui Chen, Shanshan Li, and Zheng Li

Detection & Prediction

Scalable and Obfuscation-Resilient Android App Repackaging Detection Based on Behavior Birthmark ................................................................. 476
   Cangzhou Yuan, Shenhong Wei, Chengjian Zhou, Jianguo Guo, and Hongyue Xiang

A Comprehensive Evaluation of Software Reliability Modeling Based on Marshall-Olkin Type Fault-Detection Time Distribution ................................................................. 486
   Miho Kawasaki, Hiroyuki Okamura, and Tadashi Dohi
Failure Prediction in Crowdsourced Software Development ..........................................................495
Abdullah Khanfor, Ye Yang, Gregg Vesonder, Guenther Ruhe, and Dave Messinger

Industry Papers
What-If Model Construction and Validation of Web Systems Based on Log Mining .......................................................505
Jianpeng Hu, Linpeng Huang, Juan Huang, Tianqi Sun, and Yingjun Ouyang

Automatic Test Generation of Large Boolean Expressions in Computer Based Interlocking System ..........................................................513
Zhiwei Li, Jing Liu, Haiying Sun, Tingliang Zhou, and Junfeng Sun

An Automation Tool for Compliance and Responsiveness Testing ............................................................................N/A
Nikhil Sethi, Vijayaraghavan Varadharajan, and Anjaneyulu Pasala

An Empirical Study to Revisit Productivity across Different Programming Languages ..........................................................526
Yingling Li, Lin Shi, Jun Hu, Qing Wang, and Jian Zhai

Short Papers
Software Development 1
A Systematic Review of Logging Practice in Software Engineering ..........................................................534
Guoping Rong, Qiuping Zhang, Xinbei Liu, and Shenghui Gu

Identifying Terms in Open Source Software License Texts ..............................................................................540
Georgia M. Kapitsaki and Demetris Paschalides

SoS GaP Slicer: Slicing SoS Goal and PRISM Models for Change-Responsive Verification of SoS ..........................................................546
Jiyoung Song, Young-Min Baek, Mingyu Jin, Eunkyoung Jee, and Doo-Hwan Bae

Steiner Tree Based Recommendation System for Combination of APIs and IoT Devices ..........................................................552
Tomohiro Ohtake, Yohei Seki, and Toshihiro Kodaka

Software Development 2
Software Optimizations of Multiple Sets Intersection via SIMD Instructions ..........................................................558
Xingshen Song, Yuexiang Yang, and Yu Jiang

Multi-Perspective Visualization to Assist Code Change Review ............................................................................564
Chen Wang, Xiaoyuan Xie, Peng Liang, and Jifeng Xuan

tgp: A Task-Granularity Profiler for the Java Virtual Machine ............................................................................570
Eduardo Rosales, Andrea Rosà, and Walter Binder
Software Evolution and Maintenance
An Exploratory Experiment on Metamodel-Transformation Co-Evolution ..................................................576
Djamel Eddine Khelladi, Horacio Hoyos Rodriguez, Roland Kretschmer,
and Alexander Egyed

Feature Evolution and Reuse - An Exploratory Study of Eclipse .............................................................582
Amjed Tahir, Sherlock A. Licorish, and Stephen G. MacDonell

iLSE: An Intelligent Web-Based System for Log Structuring and Extraction ............................................588
Sahan Serasinghe, Hai Feng Shen, and David Chen

How Do Programmers Maintain Concurrent Code? .................................................................................594
Feiyue Yu, Hao Zhong, and Beijun Shen

Formal Methods
Formal Definitions for Design Spaces and Traces ...................................................................................600
Judy Bowen and Anke Dittmar

Generating Equality Loop Invariants with Functions Based on Random Testing, Constraint Solving and Verification .............................................................................................606
Mengjun Li

Characterising Sound Visualisations of Specifications Using Micro-Charts and Refinement ..........................612
Colin Pilbrow and Steve Reeves

Writing Concurrent Java Programs Based on CafeOBJ Specifications ...................................................618
Xuan-Linh Ha and Kazuhiro Ogata

Empirical Studies
An Evaluation of Selection Methods for Time-Aware Effort Estimation ....................................................624
Sousuke Amasaki and Chris Lokan

Impact of the Distribution Parameter of Data Sampling Approaches on Software Defect Prediction Models ..................................................................................................................630
Kwabena Ebo Bennin, Jacky Keung, and Akito Monden

Identifying Textual Features of High-Quality Questions: An Empirical Study on Stack Overflow ..........................636
Qing Mi, Yujin Gao, Jacky Keung, Yan Xiao, and Solomon Mensah

Facilitating Scenario-Based Program Comprehension with Topic Models ..................................................642
Tianxia Wang and Yan Liu
**Code Generation and Quality**

How Do Code Refactoring Activities Impact Software Developers' Sentiments?  
- An Empirical Investigation Into GitHub Commits ................................................................. 648  
  *Navdeep Singh and Paramvir Singh*

CCFinderSW: Clone Detection Tool with Flexible Multilingual Tokenization ............................................. 654  
  *Yuichi Semura, Norihiro Yoshida, Eunjong Choi, and Katsuro Inoue*

Automatic Generation of Monitoring Code for Model Based Analysis  
of Runtime Behaviour .................................................................................................................... 660  
  *Michael Szvetits and Uwe Zdun*

Code Suggestion of Method Call Statements Using a Source Code Corpus ........................................... 666  
  *Tetsuo Yamamoto*

**Software Testing**

On the Use of Mined Stack Traces to Improve the Soundness of Statically  
Constructed Call Graphs .................................................................................................................. 672  
  *Li Sui, Jens Dietrich, and Amjed Tahir*

Test Environment Construction Method Using Parameterized Test  
Environments ........................................................................................................................................ 677  
  *Dong Hun Song, Yongjin Seo, and Hyeon Soo Kim*

Optimized Test Data Generation for RESTful Web Service .................................................................. 683  
  *Jing Liu and Wenjie Chen*

Towards an Improvement of Bisection-Based Adaptive Random Testing ........................................... 689  
  *Chengying Mao and Xuzheng Zhan*

**Software Testing and Requirements**

A Novel Tool for Automatic GUI Layout Testing ............................................................................... 695  
  *Kristian Fjeld Hasselknippe and Jingyue Li*

Multi-Process Runtime Verification for Android .................................................................................. 701  
  *Haiyang Sun, Alexander North, and Walter Binder*

Toward Detection of Abnormal Behaviors in Timing and Security  
Requirements ..................................................................................................................................... 707  
  *Danielle Gaither, Hyunsook Do, and Barrett R. Bryant*

An Ontological Approach to Elicit Safety Requirements ...................................................................... 713  
  *Luciana Provenzano, Kai Hänninen, Jiale Zhou, and Kristina Lundqvist*
Software Process
Towards Semantic-Aware Collaborations in Systems Engineering .......................................................... 719
Laurent Wouters, Stephen Creff, Emma Effa Bella, and Ali Koudri

Automated Analysis of Multi-View Software Architectures ....................................................................... 725
Chih-Hong Cheng, Yassine Hamza, and Harald Ruess

Structuring the Knowledge for Software Process Appraisal
towards Semi-Automated Support ............................................................................................................ 731
Suppasit Roongsangjan, Thanwadee Sunetnanta, and Pattanasak Mongkolwat

Factors Influencing Productivity of Agile Software Development Teamwork: A Qualitative System Dynamics Approach ............................................................................................................... 737
Israt Fatema and Kazi Sakib

Posters
Clockwerk: A Predictable and Efficient Extension of Logical Execution Time Model ......................................... 743
Bo Wan, Xi Li, Kaiqi Zhou, Haizhao Luo, Chao Wang, Xianglan Chen, and Xuehai Zhou

A Simulation Model of Kanban Software Process ........................................................................................... 745
Haojie Gong, Bohan Liu, and Dong Shao

Interface Driven Code Clone Detection ........................................................................................................ 747
Md Rakib Hossain Misu and Kazi Sakib

Retrieving Self-Executable and Functionally Correct Code to Improve Source Code Search ........................................... 749
Abdus Satter, M.G. Muntaqeem, Nadia Nahar, and Kazi Sakib

Knowledge Based Optimization for Distributed Real-Time Systems ........................................................................ 751
Mahieddine Dellabani, Jacques Combaz, Saddek Bensalem, and Marius Bozga

Author Index ........................................................................................................................................... 757
