24th International Display Workshops (IDW'17)

Sendai, Japan
6 - 8 December 2017

Volume 1 of 2

## TABLE OF CONTENTS

### VOLUME 1

#### KEYNOTE ADDRESSES

- **Next Generation Technologies for Mobile Use Display**
  - A. Takimoto

- **China AMOLED Status and Opportunity**
  - V. Tseng

- **Augmented Reality in Medicine — Design and Applications**
  - T. Nakaguchi

#### TOPICAL SESSION ON USER EXPERIENCE AND COGNITIVE ENGINEERING

##### UXC2/VHF2 : EDUCATION AND READING

- **Tablet Use in Elementary Schools from Ergonomic Aspect**
  - T. Shibata

- **A Development of Universal Design Font and Evaluation of Legibility on Display**
  - H. Yaguchi

- **Relationships Between Reading Speed and Eye Movement Parameters**
  - J. Kobayashi

- **Preferred LDR to HDR Image Conversion for HDR Displays**
  - Y.-Z. Lai

##### UXC3/INP3 : INTERACTION FOR AUTOMOTIVE - SPECIAL TOPICS OF INTEREST ON AUTOMOTIVE DISPLAYS

- **Lateral Force Produces Geometry and Texture Information on Touchscreen**
  - S. Saga

- **Position Tracking Based on Reallocation Resampling Particle Filter Algorithm on Capacitive Touch Panels**
  - T.-C. Chu

- **Automotive Tablet Display with In-Cell Touch Panel for Auto after Market**
  - Y.-C. Li

##### UXC4 : EYE MOVEMENT AND ADVERTISEMENT

- **Decoding the Implicit Mind from Fixational Eye Movements**
  - M. Yoneya

- **The Influence of Text and Images on Fixation in Flyers**
  - Y. Andoh

- **An Analysis of the Eye-Tracking-Data During Seeing Favorite Paintings**
  - A. Tera

##### UXC5/EP5 : E-BOOK AND EDUCATION

- **Visual Awareness Performance in Reading Texts on Paper versus Tablet among Indonesian Elementary School Children**
  - S. D. Mardiyani

- **Are E-Books Actually Green? The Role of E-Reader in Changing Reading Patterns and Environmental Impact in Book Reading Activities**
  - E. Amasawa

- **Cognitive Load of Handwriting and Typing: The Impact for Memorization in a Dual Task Method**
  - H. Shibata

#### POSTER UXCP1 : USER EXPERIENCE AND COGNITIVE ENGINEERING

- **A Framework to Support Knowledge Work in a Virtual Space**
  - H. Sasaki

- **High Quality Sleep by VR Goggle in an Air Pillow and a Smart Trip Line-Bot**
  - T. Miyachi

- **Detail Retina Cells Model and Array Receiver Algorithms for Sensing Qualities**
  - C.-J. Ou
TOPICAL SESSION ON HAPTICS TECHNOLOGIES

HAP1/INP2 : HAPTIC TECHNOLOGIES

Whole-Body Haptic Interface for Virtual Reality .......................................................... 69
   H. Kajimoto
Body Motion Estimation by Machine Learning ............................................................. 73
   Y. Makino
Tactility for Communication and Well-Being ............................................................... 77
   J. Watanabe
Research on a Haptic Device's Capability to Enhance the Degree of Kinesthetic Illusion Through Vibro-and-Visual Stimulation ................................................................. 80
   H. Komura

HAP2/INP4 : HAPTIC DEVICES

Electrostatic Tactile Display Integrated with a Projected Capacitive Touch Screen ........84
   H. Haga
Physical Interactions on Flat Panel Displays Using Electrostatic Actuation Technologies .................................................. 88
   A. Yamamoto
Tactile Display with Friction Reduced by Ultrasonic Vibration .................................. 92
   M. Takasaki
Subjective Haptic Technology and Its Applications ...................................................... 95
   Y. Tanaka

HAP3/INP6 : AUTOMOTIVE AND MOBILE HMI – SPECIAL TOPICS OF INTEREST ON AUTOMOTIVE DISPLAYS

Use of Shape Memory Alloy as a Haptic Technology for Displays Panels .................. 98
   M. Gondo
An In-Vehicle Infotainment System with Automotive Grade Hover Gesture Touch Display .......................................................... 102
   W.-F. Chang
Present and Future of Midair Haptics ......................................................................... 106
   H. Shinoda
Vibration Feedback for Representing Haptic Interaction .............................................. 109
   M. Konyo

POSTER HAP1 : APPLICATIONS OF HAPTIC TECHNOLOGIES

Stable Haptic Feedback Generation During Mid Air Interactions Using Hidden Markov Model Based Motion Synthesis: Increasing and Stabilizing Motion Frame Rate ............................................. 113
   D. Babu
Vibrotactile Representation of Camera Motion with Two Vibrators ............................. 116
   D. Gongora
Concept of Bilateral Softness Presentation toward Haptic Tele-Communication .......... 120
   S. Ito
Use of Ultrasonic Waves for Navigation to the Viewing Position of Aerial Secure Display .......................................................... 124
   S. Ito
Development of Vibration Cube to Convey Information by Haptic Stimuli ................. 128
   M. Azuma

WORKSHOP ON LC SCIENCE AND TECHNOLOGIES

LCT2 : HIGH IMAGE QUALITY LCDs

Reinvention of an IPS-LCD Technology Enabling Extremely High Contrast Ratio of 1 Million to 1 .......................................................... 131
   Y. Yasui
High Contrast Ratio 2000:1 Solution for Fringe Field Switching LCD without Content Adaptive Backlight Control and Backlight Local Dimming .................................................. 135
   J. Chen
Study on Minimizing Flicker Shift Phenomenon in Positive LC FFS Mode LCD Panel by Optimized Pixel Design ................................. 139
   K.-T. Huang
Flexible Colorful Reflective Display by Using Proprietary Surface Anchoring LC Technology .......................................................... 143
   C.-H. Chen
**LCT3/DES3 : HMD APPLICATIONS – SPECIAL TOPICS OF INTEREST ON AR/VR AND HYPER REALITY**

POSTER LCTP1 : LC LENS

Accumulation of Nematic Colloids at the Interfaces in Azo-Dye-Doped LCs ................................................................. 225
A.-Y.-G. Fuh

Polarization Independent LC Lens with Bi-Focus Switching Mode for Wearable Display Applications ........................................... 228
C.-W. Chien

Fabrications of Polarization Independent LC Lens Arrays for Autostereoscopy Applications ................................................................. 232
T.-H. Kao

Using Holographic Exposure Processes to Realize Polymer Stabilized LC Microlens Arrays with Fast Switching Focuses ........................................................................................................ 235
I.-L. Huang

Electrically Tunable LC Lens with Characteristic of Fast-Switching Bi-Focuses for Enhancing Depth-of-Field ........................................... 238
C.-Y. Chien

POSTER LCTP2 : EMERGING TECHNOLOGIES

The Transfective Properties Improvement of Dual-Cell-Gap ECB LCD .................................................................................. 242
C. Wang

Reflective-Emissive Dual Mode Display with Color PDLC Layer ................................................................................................. 246
G. H. Kim

Video-Rate Holographic Display in ZnSe Layer-Assisted Quantum Dot Doped LC with High-Photorefractive Sensitivity ....................................................... 250
X. Li

Bistable Light Shutter Using Ion-Doped Cholesteric LCs ......................................................................................................... 253
Y.-S. Jo

Development of Photochromic Guest-Host LC Device Driven by UV Irradiation and Electric Field .................................................................................. 255
K. Goda

Thermoresponsive Light Scattering Device Using Ionic Liquid-Water Mixture Exhibiting LCST-Type Phase Behavior .................................................................................. 257
K. Goda

Narrow-Bandpass LC Filter for Real-Time Multi Spectral Imaging Systems ................................................................................. 259
K. Terashima

Study on PDLC Like LC Cell by Using Porous PMMA Spray Film for Millimeter-Wave Application ......................................................... 262
Y. Watanabe

Basic Performance of LC Millimeter-Wave Phase Shifter by Using Microstrip Line ........................................................................................................ 264

LC Devices Having the V-Groove Structure by Nano-Imprint Lithography .................................................................................. 266
K. Haruna

Nematic LC Alignment and Anchoring Properties on Rubbed Poly (4-vinylpyridine) Surface ........................................................... 268
K. Kudo

Development of 2.9-in. 132x64 Transparent Film Displays Based on Cholesteric LC ........................................................................ 270
E.-J. Kim

Electro-Optical Characteristics of Dye-Doped LC Gel Films for Stretchable Displays ........................................................................... 272
R. Saito

Electro-Optical Characteristics of In-Plane Switching LC Devices with Structural Transferred Microgroove and Wall Structure ........................................................................... 275
D. Minami

POSTER LCTP3 : NEW LC APPLICATIONS

A Wide-View Angle Design for Vehicle Display Interface with Improving Performance ................................................................. 278
B. Su

Color Mixing Analysis of Large View Angle in FFS-LCD ........................................................................................................ 282
L. Huang

Study of Isotropic Monomer Dopant to Improve Electro-Optical Performance of Holographic Exposed Polymer
Network LC Cells .................................................................................................................................................................................................. 285
C.-Y. Lin

A Mechanism of Short-Term Image-Sticking Phenomenon Caused by Flexoelectric Effect in IPS LCD ........................................................................ 288
D. Inoue

Photo-Alignment Control of Lyotropic LC and its Application to Coatable Polarizers ........................................................................ 292
T. Itsukaichi

Numerical Analysis in Homogeneous-Twisted Nematic Transition Mode of LC Cell Using Weak and Strong Anchoring Surfaces ........................................................................... 294
Y. Sakamoto

An ECB Mode LC Device Suitable for Low Power Consumption Smart Windows .................................................................................. 296
S.-J. Lee
Electro-Optical Properties of a Hybrid Type PDLC with LC Emulsion and Black Dichroic Dye Doped LC Coacervates
H.-S. Yang

Novel Alignment Control Method Using Mortar-Shaped Structure for High-Contrast Twisted-VA mode Reflective LCDs
Y. Kuge

Formation of Layered Polymer Structure of PDLC by Anisotropically Diffused UV Irradiation
Y. Hori

WORKSHOP ON ACTIVE MATRIX DISPLAYS

AMD1 : OXIDE TFT: ADVANCED DEVICES – SPECIAL TOPICS OF INTEREST ON OXIDE-SEMICONDUCTOR TFT

Controllable Quantum Interference in Amorphous InGaZnO4 Thin-Film Transistors
W.-H. Wang

Twin-Channel Oxide TFT with High Current Drive and Its Circuit Application
M. Nakata

Simulation Study of Novel Thin-Film Devices Using Depletion State of Amorphous Oxide Semiconductor
K. Abe

AMD2 : OXIDE TFT: STABILITY – SPECIAL TOPICS OF INTEREST ON OXIDE-SEMICONDUCTOR TFT

Hydrogen-Induced Trap States in Amorphous In-Ga-Zn-O Thin-Film Transistors Studied by Photoinduced Transient Spectroscopy
K. Hayashi

AlO Sputtered Self-Aligned Source/Drain Formation Technology for Highly Reliable Oxide Thin Film Transistor Backplane
H. Hayashi

Slot-Die Coating of Soluble Metal Oxide Semiconductor Towards High-Performance, High-Resolution Self-Aligned TFT Backplanes
I. Katsouras

AMD3 : OXIDE TFT: FABRICATION – SPECIAL TOPICS OF INTEREST ON OXIDE-SEMICONDUCTOR TFT

Oxide TFT Fabrication Techniques for Advanced Flexible Display Backplanes
J. W. Na

Direct Photoreactive Patterning Method for Fabricating Aqueous Solution-Processed IGZO TFTs
M. Miyakawa

Study on the Dry Etching Characteristics of Back Channel Etch Type IGZO TFTs
Z. R. Li

Enhanced Scalability and Reliability of Indium-Gallium-Zinc Oxide Thin-Film Transistor Using a Combination of Plasma Fluorination and Thermal Oxidation
L. Lu

AMD4 : OXIDE TFT: APPLICATION – SPECIAL TOPICS OF INTEREST ON OXIDE-SEMICONDUCTOR TFT

Novel High-Image-Quality Technologies for Premium OLED TVs
H.-J. Shin

Novel Driving Circuit for High Resolution IGZO TFT Display
K. Yamamoto

Design of Highly Reliable Depletion-Mode a-IGZO TFT Gate Driving Circuit for 85-in. 8K4K 120 Hz TFT-LCD
L.-Q. Shi

Fully Printed Oxide TFTs for Display Backplane and Logic Circuits
L. Lan

AMD5 : ORGANIC / CARBON TFT (1)

Stable Low Voltage Solution Processed Organic Field Effect Transistors
X. Guo

Improving Charge Carrier Mobility and Operation Frequency in Polymer Transistors
A. Perinot

Enhanced Mobility of Top-Gate Dialkyl BTBT Transistors by Spin Coating from Non-Halogen Solvents
S. Sanda
Inkjet-Printed Short-Channel Thin-Film Transistors ..........................................................373
Y. Li

AMD6: ORGANIC / CARBON TFT (2)

Vertical Organic Light Emitting Transistors for Large Screen AMOLED Displays ..................375
B. Liu
Active-Matrix LED Display Using Solution-Processed Single-Crystal Organic TFTs for Large-Area Flexible Displays .................................................................379
M. Sawamoto
Label-Free and Antibody-Free Protein Detection Based on Organic TFTs ........................382
T. Minami

AMD7: NOVEL DISPLAY DEVICES

Nanocarbon Based Light Sources and Detectors for Integrated Optoelectronics ..................386
H. Maki
Monolithically Integrated Supercapacitors and Electrolyte-Gated Transistors ......................389
F. Soavi
Techniques in Pixel and Peripheral Circuit Design to Achieve High PPI in AMOLED Display 390
Y. Song
Pulse I-V Approach for Quantitative Analysis of Defects and Charge Trapping in Amorphous Oxide Semiconductor Thin Film Transistor ........................................393
S. Jeon

AMD8: HIGH RESOLUTION

New Pixel Driving Circuit Using Self-Discharging Compensation Method for High-Resolution OLED Microdisplays on a Silicon Backplane .................................396
K. Kimura
Magneto-Optical Spatial Light Modulator Driven by Spin Transfer Switching for Electronic Holography ........................................400
N. Funabashi
New Pixel Circuit with Current-Bias Voltage-Programmed Structure to Fast Compensate for Threshold Voltage Variations of LTPS TFTs for AMOLED Displays 404
L.-R. Chen

POSTER AMDP1: OXIDE TFTS – SPECIAL TOPICS OF INTEREST ON OXIDE-SEMICONDUCTOR TFT

Achieving High Carrier Mobility in IGZO Transistors by Catalytic Metal Assisted Crystallization 407
Y. Shin
Soluble-Processed Aluminum Doped Yttrium Oxide Gate Insulator for High Performance Amorphous Oxide Transistors .................................................................410
J. Lee
31-in. 4K2K AMOLED Display Using High Thermal Stability and Reliability Top-Gate Self-Aligned IGZO TFTs .................................................................413
X.-Y. Zhou
Development of Self-Aligned Top-Gate a-IGZO TFTs for a 31-in. 4K2K AMOLED Display 417
S.-M. Ge
Low Cost Back-Channel-Etch InGaZnO Thin Film Transistors with Cu/Mo Bus Line Fabricated by a 4-Mask Process .................................................................420
F. Zhu
Moisture Dominant Electrical Degradation of Amorphous InGaZnO Thin Film Transistors under Positive Bias Stress .................................................................424
Y. Zhou
Development of 31-in. UD AM-OLED Display Using Self-Aligned Top Gate IGZO TFTs 427
Y. Meng
IGZO TFT Gate Driver Circuit Capable of Ripple Control without QB Node ........................430
J. Oh
Characteristics of a-IGZO TFT Stability by Dry Etching ..........................................................436
J. Choi
Development of 65-in 4K UHD OLED TV with High Reliability and Short Channel IGZO TFTs 439
J. S. Koo
Fabrication of Low Temperature Process TFT Using High Density a-InGaZnO Film Deposited by Inductively Coupled Plasma Sputtering System ........................441
D. Matsuo
Characteristic Evaluation of Ga-Sn-O Thin Films by Hall Measurement .........................444
K. Imanishi
POSTER AMDP2 : ACTIVE-MATRIX DEVICES

Reduction of Leakage Current for Poly-Si TFTs with Metal Source/Drain by Dual Gate Structure .................................................. 447
F. Gakiya

Electrical Degradation Behavior of p-Type LTPS TFT for Flexible AMOLED Applications .............................................................. 450
F.-H. Chen

High Mobility LTPS TFTs with 150 nm Poly-Si by Blue Laser Annealing on Glass ................................................................. 453
S. Hong

Factor Analysis and Evaluation Method for Crosstalk Capability of LTPS LCD ........................................................................ 456
H. Zhou

Special-Shaped Display Device with High Screen Occupation Ratio .......................................................................................... 460
X. Wu

Study the Characteristics of a-Si:H Thin Film Transistors by Covering with Different Materials ........................................ 463
W.-Y. Li

New Integrated EM Driver Using LTPS TFTs in AMOLED Displays .................................................................................. 467
J. Wu

Short-Channel Pentacene Thin-Film Transistor Circuits Patterned by Lift-Off Process Using PVA and SU-8 .......................... 470
M. S. Kim

Analysis of Unusual Large Current after Reliability Test in 55-in. UD TFT-LCD TV with a-Si Integrated Gate Driver Circuit ........................................................................................................ 473
L. Zeng

Evaluation of Thin-Film Phototransistors Arrayed for a Magnifying Viewer ............................................................................ 476
I. Ogawa

Application of Film Filter in Embedded Luminance Sensors .................................................................................................. 479
S.-B. Liu

Double-Gate P-ch Cu-MIC Low-Temperature Poly-GeSn TFTs on Glass Substrates ............................................................. 482
N. Nishiguchi

Hybrid Compensation Method for AMOLED Pixel Circuit .................................................................................................. 485
C. Nie

WORKSHOP ON FPD MANUFACTURING, MATERIALS AND COMPONENTS

FMC1 : MANUFACTURING AND MEASUREMENT TECHNOLOGIES

Micro-Transfer Printing of RGB Light Engines for Emissive Displays .................................................................................. 488
A. J. Trindade

Contact Resistance Reduction Using Linear Ion Source PVD System in LTPS Backplane .......................................................... 492
Y.-C. Tsai

Advanced Half-Tone Photolithography Using Four-Mask Technology for G8.6 Large Size TFT-LCDs ........................................ 496
A.-T. Cho

Optical Measurement Methods for Flexible OLED Elements with Arbitrary Geometric Curvature ........................................ 500
K. Käläntär

FMC2: DISPLAY FILM TECHNOLOGIES

Large Area Interference Lithography and Seamless Patterning Innovations ........................................................................ 504
J. Mick

Curable Coating Material Technologies for OLED Display .................................................................................................. 508
K. Noda

Application Development of Crystalline COP to Optical Film .................................................................................................. 511
S. Komoto

Excellent Image Visibility of New Display Using Quantum Dot Color Filter and In-Cell Polarizer under Bright Ambient Light ........................................................................................................ 514
N. Koma

FMC3 : DISPLAY OPTICS FOR AR/VR – SPECIAL TOPICS OF INTEREST ON AR/VR AND HYPER REALITY

3D Display for Augmented Reality ........................................................................................................................................ 517
B. Lee

Hologram Synthesis for Near to Eye Displays ......................................................................................................................... 520
J.-H. Park

Optical Design of Directional Projection Screen Using Diverted Corner Cube Array ....................................................................... 524
K. Käläntär
### FMC4/FLX5: ROLL-TO-ROLL MANUFACTURING TECHNOLOGIES

**Development of Printed Electronics Device by Nano-Scale Roll to Roll Patterning**
T. Tanaka

**Flexible Transparent Electrodes for Large-Area Printed Electronics**
T. Muto

**Novel Direct Imaging Exposure System with High Productivity for Flexible Substrate in Roll-to-Roll Method**
Y. Kito

**Microwave-Assisted Rapid Synthesis of Carbon Nanotubes Covalently Conjugated with Sulfonated Polyaniline for Enhancing Stable Dispersion of Aqueous Conductive Inks**
P.-C. Wang

### FMC5: ELECTRODE MATERIAL AND PHOTORESIST TECHNOLOGIES

**Enhanced Electrical Durability and Mechanical Stretchability of Ag Nanowire-Based Transparent Electrodes by Nanometer-Thick Metal Plating**
T. Araki

**ITO/Ag Alloy/ITO Structure as Alternative to ITO for Display Electrode**
Y. Toshimori

**Identification of Copper Compound Produced in Dry Etching Process under Different Atmosphere and its Removal via a Simple Solution Treatment**
Z.-C. Zhou

**Mechanism of Color Characteristic Degradation of Colorant Material for Wide Color Gamut Under Complex Stress Environment**
A. Kim

### FMC6: GLASS MATERIAL TECHNOLOGIES

**Application of Glass in Electronic Displays**
K. Hayashi

**High Bending Strength Chemically Tempered Cover Glasses for Mobile Display Devices**
Y. Fujiwara

**Anti-Reflection and Anti-Glare Surface Treatment on Cover Glass for Automotive Interior Applications: Ambient Contrast Consideration**
K. Long

### POSTER FMCP1: FPD MANUFACTURING, MATERIALS AND COMPONENTS

**Development of Colorants for Wide-Color Gamut Color Filter Photoresist**
S.-J. Yang

**Dispersion and Optical Properties of QDPR (Quantum Dot Photo Resist)**
D. Li

**Design of Optimized OCR Slit-Nozzle for Lamination of Foldable OLED Display with Various Shapes**
B.-C. Lee

**To Specialize an Attenuated Phase Shift Mask in DUV Broadband Illumination**
M. Hakko

**TFT Characteristics Improvement by Using Modified Single Slit Mask**
G. Shi

**Material Deformation by Using New 3 GeV Synchrotron Light Source**
T. Abukawa

**TFT Fabrication Process Using Imprint Lithography for Roll-to-Roll OLED Display Manufacturing**
S. Kim

**Design of LED Lighting for Multi-View Display Application**
Y.-M. Weng

**Influence of UV-Ozone Treatment on Properties of Poly(3,4-ethylenedioxythiophene)-Tetramethacrylate Prepared on Various Substrate Materials**
S. Toguri

**Electrooptical Property of Polymer Stabilized Reverse Mode Cell by Nonuniform UV Irradiation**
R. Sasaki

### POSTER FMCP2: AERIAL IMAGING OPTICS – SPECIAL TOPICS OF INTEREST ON AR/VR AND HYPER REALITY

**Omnidirectional Aerial Display with AIRR by Using Multifaceted Beam Splitters**
S. Onose

**Constructing a Sound System As If Sound is Coming from Aerial Image**
K. Fujii
Comparisons of Aerial Image Sharpness Formed with AIRR by Use of Retro-Reflectors Made of Glass Beads with Different Refractive Indices ..........................................................................................................................................................................613
K. Onuki

POSTER FMCP3 : COMPONENTS FOR AUTOMOTIVE – SPECIAL TOPICS OF INTEREST ON AUTOMOTIVE DISPLAYS

12.3-in. Free-Form Automobile Display with 2BG+R System for Wide Color Gamut ................................................................................................................................................................616
H. Wu

WORKSHOP ON INORGANIC EMISIVE DISPLAY AND PHOSPHORS

PH1 : PHOSPHORS FOR GENERAL

Highly Efficient Laser-Phosphor Light Source for Projector ........................................................................................................................................................................619
H. Morita
Formation of Nanophosphors Using Novel Water Assisted Solid State Reaction ................................................................................................................................................................622
K. Toda

PH2 : PHOSPHORS FOR LIGHTING APPLICATION – SPECIAL TOPICS OF INTEREST ON LIGHTING AND QUANTUM DOT TECHNOLOGIES

Micro Grain Analysis in the Ce:YAG and Sapphire Co-Crystal Phosphor ........................................................................................................................................................................626
S. Kubota
Towards High-Performance Solution-Processed Light Emitting Diodes Based on Quantum Dots .....................................................................................................................................................................630
Y. Jin

POSTER PHP1 : PHOSPHORS FOR GENERAL

Characteristics of Nonpolar ZnO Films Grown on R-Sapphire Substrates Using Catalytically-Generated High-Energy H2O ..................................................................................................................................................................................................633
M. Ikeda
See-Through Phosphor Screens for Display Applications ........................................................................................................................................................................637
T. Kohmoto
Formation of Photonic Crystal Cavity in SOI Substrate and Emission Characteristics of Quantum Dots ..................................................................................................................................................................641
T. Hayashi
Different Transparent and Conductive Substrates Effect on the Structural and Optical Properties of ZnO Nanorods ................................................................................................................................................................................................645
C. Li
Single Phase Preparation of Eu Doped Sr₄Al₁₄O₂₅:Eu Afterglow Phosphor by Boron-Free Synthesis Method ................................................................................................................................................................................................653
K. Hada
Luminescent Properties of Alkaline-Earth Metal Substituted Sr₂MgSi₂O₇:Eu Phosphors ........................................................................................................................................................................................................656
M. Ohkawa
Atomic Distribution of ZnAl₂O₄ Thin Film Prepared by Thermal Diffusion of ZnO on Sapphire Substrate ................................................................................................................................................................................................659
K. Kijima
Luminescent Properties of Deep Red Emitting Mn⁴⁺-doped (La,Y)₂Mg(IV)O₆ Phosphors ........................................................................................................................................................................................................661
Y. Kato

POSTER PHP2 : PHOSPHORS FOR LIGHTING APPLICATION – SPECIAL TOPICS OF INTEREST ON LIGHTING AND QUANTUM DOT TECHNOLOGIES

Light Extraction from a Laser-Pumped Phosphor Layer with a Remote Reflector ........................................................................................................................................................................664
M. Ohkita
Mixed Fluoride Based Nanophosphors Synthesized Using a Hydrothermal Method for Photodynamic Therapy of Malignant Tumors ................................................................................................................................................................................................668
A. M. Dorokhina
Improved Photostability of Tetramethyl Orthosilicate-Modified InP/ZnS Quantum Dots ..................................................................................................................................................................................................671
T. Watanabe

WORKSHOP ON OLED DISPLAYS AND RELATED TECHNOLOGIES

OLED1 : OLED DISPLAYS AND DEVICES

High Performance Full Color AMOLED Microdisplays for AR/VR ..................................................................................................................................................................................................................673
T. Ali
Head-Mounted Display Optical Simulation by Using an OLED Panel with Quasi-Crystal Structure .................................................. 677
Y.-D. Chen

High Performance Organic Light-Emitting Diode Using Exciplex-Triplet Energy Transfer Technology and Its Application ........................................................................................................ 681
S. Seo

Novel Transparent Oxide Semiconductor, Zinc Silicates, for Electron Injection/Transport Layers in OLEDs ........................................ 685
H. Hosono

Low Temperature Formation of SiNx Encapsulation Films by Remote Plasma Enhanced Chemical Vapor Deposition ........................................... 687
S. Higashi

OLED2 : OLED MATERIALS

Current Understanding of Mechanism of Thermally Activated Delayed Fluorescence: RISC beyond S-T Energy Gap .......................................................... 690
T. Hosokai

Towards Commercialization of High-Efficiency Blue in OLEDs ..................................................................................................................... 694
T. Baumann

Effect of Energy Transfer on Operational Lifetimes of Organic LEDs ........................................................................................................ 698
H. Fukagawa

Development of Printed, High-Performance Polymer TFTs Towards Low-Cost Backplane Production ........................................... 702
A. Morley

Photo-Degradation of Hole Transport Materials Studied by LDI-TOF Imaging .................................................................................... 706
S.-C. Dong

OLED3 : OLED ADVANCED TECHNOLOGY (1)

Importance of Chamber Environment for Stable OLEDs ..................................................................................................................... 708
H. Fujimoto

Analysis for Carrier Behavior of OLED Device with Pixel-Defining Layer by Impedance Spectroscopy .................................................... 711
T. Naganuma

The Atmosphere Dependence of Annealing for Anode of OLED ..................................................................................................................... 715
Y. Hayashi

Highly Reflective Semi-Transparent Cathode for Highly Efficient Top Emission OLED Devices .......................................................... 718
S. K. Kim

OLED4 : OLED FOR LIGHTING APPLICATIONS – SPECIAL TOPICS OF INTEREST ON LIGHTING AND QUANTUM DOT TECHNOLOGIES

High-Efficiency and Stable Light-Emitting Diodes Based on Quantum Dots .............................................................................................. 721
X. Yang

Development of High Transmittance, Low Sheet Resistance and High Thermal Stability Transparent Cathode Technology ........................................ 724
S. Ootsu

Enhancement of Out-Coupling Efficiency on OLED with the Improved Charge Balance Using ZnO Nanoparticle Dispersed Electron Transport Layer .................................................................................. 727
S. J. Park

High Efficiency Large Area White Organic Light-Emitting Diodes Using Phosphorescent Materials — Degradation and Stability Improvement .................................................................................. 730
M. Seetharaman

OLED5 : OLED ADVANCED TECHNOLOGY (2)

Hyper Spectral Photometry Technology .................................................................................................................................................. 734
Y. Izaki

Vision Assessment of OLED Wall-Paper Display and Curved Quantum Dot LCD .......................................................................................... 738
Q.-L. Wu

Potential Cardiac Autonomic Derangement by Oscillatory OLED Light .................................................................................................. 742
E. Yuda

Vertically-Stacked Polychromatic OLED and Three-Dimensionally-Integrated Organic Electronics Enabled by the Technology ........................................................................................................ 746
T. Tsujimura

POSTER OLEDP1 : OLED POSTER

Different Pretreatment Effects on the Hydrophobicity of Inkjet Printing Pixel Define Layer ...................................................................................... 750
J. Tang
A Study on Self-Healing for Full Recovery Against Scratches on OLED Display Surface ................................................................. 753
D. H. Jang

Novel Silane Core Hosts for Highly Efficient Blue Thermally Activated Delayed Fluorescence OLEDs .......................................................... 756
J. S. Moon

A New Treatment Method to Prevent Dark Spots in Flexible Organic Light-Emitting Diodes ................................................................. 760
B. M. Park

Color Shift and Jagged Edge Solutions in Freeform LCD and OLED .................................................................................................. 763
Z. Xu

Study of Organic Light-Emitting Diodes Efficiency with Binary Fluorescence Dye Photo Resist of Color Conversion ................................................................. 766
S. Kim

Analysis of Indium Diffusion Phenomenon in OLED ................................................................................................................................. 770
H. Anamizu

Efficient Hole-Buffering Layer for PLEDs: A 1,2,4-Triazolyl Derivative with Multi-Imine Groups ................................................................. 773
Y. Chen

Large-Area Flexible OLED Fabricated by Full Roll-to-Roll Processes from Transparent Electrode to Encapsulation ........................ 776
S. M. Cho

Improvement in Power-Conversion Efficiency of OPV Cells Using UV-Modified Surface Patterning Method ................................................................. 778
W. Mizuguchi

POSTER OLEDP2: OLED/LIT POSTER – SPECIAL TOPICS OF INTEREST ON LIGHTING AND QUANTUM DOT TECHNOLOGIES

High Efficiency and Long Lifetime Electron Transporting Materials for OLED Devices and Lighting Applications .................. 780
H.-L. Huang

Efficiency Enhancement for Patterned Quantum Dot-Converted White OLED Display Using Photoresist Dispersed TiO2 ................................................................. 786
H.-J. Kim

WORKSHOP ON 3D/HYPER-REALISTIC DISPLAYS AND SYSTEMS

3D1/DIS2: 3D DISPLAY IN AR/VR AND HYPER REALITY – SPECIAL TOPICS OF INTEREST ON AR/VR AND HYPER REALITY

Development of 55-in. 8K-3D IPS LCD with 3D Polarization Filter ................................................................................................. 789
J. Maruyama

A Virtual Reality Display Based on Cluster-Eye Image Stitching ................................................................................................................................. 793
H. Yen

Holographic Augmented Reality Head-Mounted Display with RGB Full HD Microdisplay ................................................................. 797
Y.-T. Kim

An Augmented Reality Display System ................................................................................................................................................ 801
X. Ma

3D2: LIGHT FIELD AND MULTIVIEW

Cameras for Light Field Imaging ................................................................................................................................................................. 804
J.-Y. Son

VOLUME 2

3D TV Based on Spatial Imaging ................................................................................................................................................................. 808
M. Kawakita

3D Camera Unit Used for Conventional 2D Endoscopes ................................................................................................................................. 812
Y. Takada

Modular Autostereoscopic Multi-View Display ................................................................................................................................................ 815
F. Mukhtarov

3D3: EMERGING TECHNOLOGIES

Augmented Visualization of Reality from Collection of Images ................................................................................................................................. 818
H. Saito

Depth-Fused 3D on Aerial Thermal Display ................................................................................................................................................ 821
R. Kujime
Glasses-Free 3D Augmented Reality System Based on a Naked-Eye 3D Display Combined with a Semi-Transparent Mirror ................................................................. 825
A. Zhang
Optimal Parameters of AR Image Rendering for an Optical See-Through HMD ................................................................. 829
Y.-T. Hsiao

3D4 : HOLOGRAPHY

1 μm-Pitch Pixel Structure Using Dielectric Shield Walls in Liquid Crystal Spatial Light Modulators for Electronic Holographic Displays ........................................................................ 833
Y. Isomae
K. Yamauchi
GPGPU Accelerating Technique for Calculation of Horizontal Scanning Holographic Display ........................................ 841
S. Honda
HOE-Based Screen for Virtual-Image Projection and Scene Capture .................................................................................. 845
T. Nakamura

3D5 : AUTOSTEREOSCOPIC DISPLAY

Comparison for the Image Quality Assessment of Multi-View 3D CG Images and 5K Images Based on S-CIELAB Color Space ........................................................................................................... 849
N. Takada
Full HD Autostereoscopic Display Based on Time-Multiplexed Parallax Barrier with Adaptive Time-Division 853
H. Kakeya
Color Moiré and Resolution Analysis of Multiple Integral Three-Dimensional Displays .................................................................................. 860
H. Sasaki

POSTER 3DP1 : 3D AND HYPER REALITY SYSTEMS

Fast System Calibration of Multi-Camera for Foot Scanner .................................................................................................................. 864
D.-Y. Lu
A 2x2 Waveguide Holograms Attached on LCD Panel for a Multi-Function Display .................................................................................. 884
W.-T. Liu
Color Compact Head-Mounted Holographic Display Using Laser Diodes ........................................................................................ 888
H. Kabo
The Combination of the Dynamic 3D Display System and 2D Liquid Crystal Display ................................................................. 892
W.-K. Liu
An Efficient Backlight Design for Directional Backlight Autostereoscopic Display .................................................................................. 895
K. Li
Optical Plate-Free Low Signal-to-Noise 3D Display Using Micro Striped-LED Arrays ................................................................. 898
H. Shim
Using Higher Resolution and Lower Bit-Depth Panels for Stacked-Layer Light-Field Display ................................................................. 901
Y. Koyanagi
Enhancement of Depth of Field in Integral Imaging System by Liquid Crystal Coaxial Bifocal Lens Array ................................................................. 905
W.-Y. Lu
Examination of Computation and Subjective Test Result for Depth Distance in Integral Photography ................................................................. 908
A. Nagano
Coding Performance of Integral 3D Images Using Multiview Images with Depth Map ................................................................. 910
K. Hara
Pseudo-Focus Position Change in Bifocal LC Lens by Changing Polarization Angle ................................................................. 912
R. Sasaki
High-Speed and High-Definition 3-D Holographic Movie Playback Using SSD and DMD without the Use of Cache Memory ................................................................................................................................. 915
N. Takada
Real-Time Electroholography of 3D-gradation Movie Using Bit Planes Based on Binary-Weighted Computer-Generated Holograms and Multiple GPU Cluster System ........................................................................ 918
T. Saitoh
Real-Time Spatiotemporal Division Multiplexing Electroholography Using a GPU Cluster

M. Oikawa

POSTER 3DP2: AERIAL IMAGING SYSTEMS – SPECIAL TOPICS OF INTEREST ON AR/VR AND HYPER REALITY

Real-Time Electroholography Using Multiple GPU Cluster System with a Single Spatial Light Modulator and Gigabit Ethernet Network

H. Sannomiya

Aerial Hollow-Face Illusion with AIRR

N. Kurokawa

3D Lighting for Hyperspectral Imaging of Leaf Group by Use of Aerial Imaging Optics

K. Kawai

Omnidirectional Aerial Display for Medaka

E. Abe

Aerial DFD Display with AIRR

Y. Terashima

Influence of Decreasing Motion Parallax Widths in Arc 3D Display on Perceived Depth Degradation by Decreasing Visual Acuity of One Eye

Y. Awata

Large Viewing Zone of Multi-View Fresnel Arc DFD Display

W. Kinoshita

Compact Layered Multi-View Display Using Arc 3D Display as Directional Backlight

S. Koyama

Development of 35-in. Tabletop Display with Wide Viewing Angle Using Projection-Based Light Field Display Technology

W. Jang

Haptic Feedback by Electromagnetic Array on See-Through Light Field Display with Beam Splitter

T. Ohashi

Single-Pixel Imaging on Aerial Display with AIRR

S. Morita

Comparison of Image Quality of Aerial Image Formed with Aerial Image Techniques by Viewing Angle

N. Kawagishi

Enlarging Viewing Distance and 3D Image Depth at Large Edge-Based DFD Display by Blurring Edge Parts

Y. Nagao

WORKSHOP ON APPLIED VISION AND HUMAN FACTORS

VHF1/UXC1: HUMAN FACTORS

Displays for Reading and Writing: Learning from Cognition on Paper

H. Shibata

Visual Resolution Quantization for Sub-Pixel Rendering Design

Y. L. Chen

Subtle Flickering Polychromatic SSVEP Visual Stimuli for Human-Computer Interaction

Y.-Y. Chien

Full-HD Autostereoscopic Display for Myopia Rehabilitation

H. Zhang

VHF3: SPECIAL SESSION ON COLOR VISION

An Introduction of New CIE Colorimetric Systems, CIE2006LMS and CIE2015XYZ

H. Yaguchi

Investigation of the Helmholtz-Kohlrausch Effect in Using Laser Projectors

C. Jin

Individual Differences in Chromatic Perception: Continuous Variation from Dichromacy to Trichromacy

S. Hira

VHF4: MOTION IMAGE QUALITY AND SICKNESS

Moving Image Quality: Visual Ergonomics, Requirements and Evaluation with an 8K 120 Hz LCD

T. Kurita

Guiding Principles for High-Quality Moving Picture in FFS Mode Mobile Displays Using LCs with Negative Dielectric Anisotropy

A. Ling

Numerical Rating of Motion Image Quality on Latest 4K TVs Using Viewing-Distance-Free Robust Approach

I. Kawahara
Amount of Visual Rotation as Determinant of VIMS for Ergonomic Guidelines
H. Ujike

VHF5 : DISPLAY MEASUREMENT AND EVALUATION

Thirty Years of Viewing Angle Measurement Instruments Based on Fourier Optics
P. Boher
Spectrometer-Enhanced Imaging Colorimeter for Display Testing in Production Lines
M. Wolf
Simplified Method to Quantify Sparkling of Antiglare Display without Image Processing and Its Application
M. Hayashi
Reduction of Visual Fatigue in Displays by Surface Treatments
Y. Yang

VHF6 : HIGH DYNAMIC RANGE AND IMAGE QUALITY

Picture Level Control Method for Super Large-Area Display
T. Yamamoto
Key Subject Evaluation Factors of HDR Image Quality Based on LCD and OLED Comparison
J. Wang
Viewing Angle Color Evaluation of QLED and OLED HDR Displays Using Lab and ICtCp Color Spaces
P. Boher
CIELAB-Metric Color Volume for HDR Displays
K. Masaoka

VHF7 : ERGONOMICS FOR AUTOMOTIVE APPLICATIONS – SPECIAL TOPICS OF INTEREST ON AUTOMOTIVE DISPLAYS

Human Centered HMI for the Future Automobile
M. Akamatsu
Automotive Displays: Visual Ergonomics and Measurements
K. Blankenbach
Response Time and Viewing Angle Behavior of Liquid Crystal Displays versus Temperature
P. Boher

VHF8 : VIRTUAL REALITY – SPECIAL TOPICS OF INTEREST ON AR/VR AND HYPER REALITY

Optical Instrument Requirements for Measuring Near-Eye Displays
J. Penczek
VR Experience Player for Subjective Evaluations of Visual VR Content
T. Järvenpää
Methods for Subjective Evaluations of Visual VR Experience
M. Salmimaa
Effect of Projection Mapping on Haptic Perception of Texture
K. Hirai

POSTER VHFP1 : APPLIED VISION AND HUMAN FACTORS – AUTOMOTIVE APPLICATION – SPECIAL TOPICS OF INTEREST ON AUTOMOTIVE DISPLAYS

Development of a Device to Improve the Attention Level while Driving Using Vibrators
H. Maruyama

POSTER VHFP2 : APPLIED VISION AND HUMAN FACTORS – VIRTUAL REALITY – SPECIAL TOPICS OF INTEREST ON AR/VR AND HYPER REALITY

Legibility of Color Text in Outdoor Environment for Optical See-Through HMD
Y.-J. Lin

POSTER VHFP3 : APPLIED VISION AND HUMAN FACTORS

Quantitative Evaluation of the Mura from Perceived Luminance Using the 2D Contrast Sensitivity Function Filter
S. W. Jung
Evaluation Method of Transflectance for Transparent Displays
K. Mo
Analysis of Head Movement and Eye Movement While Gazing Image from Short Distance ................................................................. 1087
S. Mochiduki

Fatigue Evaluation by Paralanguage Recognition and Gazing-Point Analysis ......................................................................................... 1091
M. Suganuma

Line Drawing Image Segmentation Using Constrained Delaunay Triangulation .............................................................................. 1095
X. Liu

Shadowing and Highlighting for Colorized Freehand Line Drawings Based on Reference Images and Users' Preferences .......................................................... 1099
S. Kurata

Sea Foggy Image Haze Removal Algorithm Based on Image Fusion .................................................................................................. 1103
S.-L. Liu

Pseudo High Dynamic Range Imaging Based on Image Enhancement ...................................................................................................... 1107
S.-L. Liu

New Metric for Resolution Evaluation Based on Human Visual Perception ......................................................................................... 1111
K. Choi

Development of a Novel Accurate Analysis System Regarding Information Processing Within the Gaze Point ................................. 1114
T. Kushima

POSTER VHFP4 : APPLIED VISION AND HUMAN FACTORS – COLOR VISION – SPECIAL TOPICS OF INTEREST ON WIDE COLOR GAMUT AND COLOR REPRODUCTION

Performance Measurement of RGB Displays with Degenerate Colors ................................................................................................. 1118
J. L. Bergquist

Measured Values of the Helmholtz-Kohlrausch Effect for Natural Images and Scrambled Pixel Images ...................................................... 1121
D. Takasu

Evaluation of Color Perception Using Narrow Band Color Projection Display ...................................................................................... 1125
M. Takaya

WORKSHOP ON PROJECTION AND LARGE-AREA DISPLAYS AND THEIR COMPONENTS

PRJ1 : AUTOMOTIVE / DISPLAY APPLICATION – SPECIAL TOPICS OF INTEREST ON AUTOMOTIVE DISPLAYS

Projection-Type Three-Dimensional Displays with Holographic Screen Fabricated by Wavefront Printer ..................................................... 1128
K. Wakunami

Performance Characterization of Delay Response Time with Wearable Displays .................................................................................. 1131
T. Fujiwara

Bi-Functional Automotive Headlamps for Adaptive Driving Beam and Low Beam Realizing Achromatic Illumination by Using a Light Guide .............................................................................. 1134
M. Nagayoshi

2-Plane Head-Up Display by Single DLP-PGU ................................................................................................................................. 1138
S. Sekiya

PRJ2 : STANDARDIZATION

Recent Achievement of Standardization Activities for Head-Mounted Displays ................................................................................. 1142
K. Hyodo

Impact of Color Speckle on Display Measurement Standardization ....................................................................................................... 1146
J. Kinoshita

Measurement Method of Eye-Box Characteristics for AR/VR Eyewear Display by Two-Dimensional Measurement Equipment with Optical Attachment .............................................................................. 1150
K. Tsurutani

Viewing-Angle Characteristics of Speckle Contrast among Different Types of Screens ............................................................................ 1154
M. Kurashige

PRJ3 : DIGITAL CINEMA AND PROJECTION MAPPING

Lamps, Phosphors and Lasers: The Past, Present and Future of Digital Cinema ................................................................................. 1157
M. Perkins

Native 4K HDR Projector with Laser Light Source ............................................................................................................................. 1161
T. Furukawa

Lifetime Evaluation of 638 nm Dual Stripe Broad Area Laser Diode for Display Application .............................................................................. 1165
K. Karamoto
PRJ4 : WEARABLE TECHNOLOGY – SPECIAL TOPICS OF INTEREST ON AR/VR AND HYPER REALITY

Display Unit Using Laser Scanning Device
T. Matsuda

Enhancing Both Logical and Emotional Abilities with Information and VR/AR Technologies Suitable for Infant Development
S. Ohtsuka

Every Aspect of Advanced Retinal Imaging Laser Eyewear: Principle, Free Focus, Resolution, Safety, and Medical Welfare Applications
M. Sugawara

Optical Design of Non-Telecentric Projection Lens for an LED Illumination System
C.-K. Lo

PRJ5 : HOLOGRAPHIC DEVICE

Aerial Interaction with Holograms of Insensible Frequency towards Generating Audio, Visual, and Haptic Feedback in the Three Dimensional Space
Y. Ochiai

Enlarge the Exit Pupil Size with Homogenous Luminance Output in Holographic Waveguide Display System
A. Liu

Light Beam Manipulation with Liquid Crystal Based Micro-Optical Components
D. Cuypers

High Optical Efficiency RGB Light Mixing Technique for Head Mounted Display
T. Kuno

POSTER PRJP1 : PROJECTION DISPLAYS

Simulation of the Projection Mapping to a Directional Volumetric Display
M. Ikeda

Projecting Prompter Information via a Common Information Screen with AIRR
T. Okamoto

Viewing Angle Analysis and Light Source Shielding on Both-Sided Aerial Display with AIRR
K. Shimose

Halving Aerial Display Thickness by Use of a Parallax Barrier
T. Kobori

The Projection Lens Design for a Hemisphere Screen
F.-N. Wang

Evaluation of Propagation Distance of Visible Light Through Human Skin for 3D Projection Screen
E. Katumata

Light Field Display Using Multi-Projectors Based on Splicing Algorithm
K. Ma

WORKSHOP ON ELECTRONIC PAPER

EP1 : NEW APPLICATIONS OF E-PAPER

Applications of Electrophoretic Displays in Architecture and Design
P. G. Apen

Solid-State Reflective Displays (SRD) for Video-Rate, Full Colour, Outdoor Readable Displays
C. Talagrand

Highly Reflective Electrostatic Shutter Display
E. Schlam

EP2 : VARIOUS TECHNOLOGIES FOR E-PAPER

Progress in Electro-Fluidic Displays: Key Materials and Processes
R. Zhou

Review on Electro-Phoretic E-Paper Development
B.-R. P. Yang

E-Paper Touch System for IoT Safety and Security Using Status LEDs for Visible Light Data Transmission
S. Otten

EP3 : NOVEL COLOR E-PAPER TECHNOLOGIES

The Color + Video Revolution of Electronic Paper
R. J. Fleming
Skin-Like Full-Color Plasmonic Reflective Displays

D. Chanda

EP4 : ADVANCED ELECTROCHROMIC DISPLAYS

Enhancement of Black Mode State Using Three-Dimensional Nano Branches in Electrochromic Device

J.-L. Lee

A Multicolor Electrochromic Display Having Hybrid Capacitor Configuration with Carbon Electrode

Z. Liang

The Relationship between Response Characteristics and Particle Size in the Nanoparticle-Based Fast-Response Electrochromic Electrode

Y. Watanabe

Electrochromic Devices with Metallo-Supramolecular Polymer

M. Higuchi

POSTER EPP1 : ELECTRONIC PAPER

Performance and Impressions of Paper/ LCD Tablet/ e-Paper in a Reading and Writing Task as a Typical Study Scene by Pupils

N. Ota

Emissive and Reflective Dual-Mode Display with Switchable Two-Color Emission Based on Twisting-Ball Display

Y. Komazaki

Novel Electrochemical Modulation Device Enabling Control Between Transparent, Mirror, Black, and Light Emission State

S. Tsuneyasu

Flexible SnO2 Electrodes Prepared by Spray Deposition Processes for Ag Deposition-Based Three-Way EC Device

H. Suzuki

Improvement of Memory Properties of Ag Deposition-Based Electrochromic Device by Introducing Ion Exchange Membrane

S. Kimura

WORKSHOP ON MEMS AND EMERGING TECHNOLOGIES FOR FUTURE DISPLAYS AND DEVICES

MEET1 : MICRO/NANODISPLAYS AND NANOTECHNOLOGY APPLICATION

OLED on CMOS: What about Thinning and Curving?

T. Maindron

On-Chip Polyaniline Electrochromic Microdisplay for Disposable Bio-Sensing Chip

T. Tsukamoto

Micro-LEDs: How It Happened and Where to Go?

Z. Liu

Development of Nano-Phosphors Films for Polymer Protection and Plant Growth

G. R. Fern

A Planar Field Emission Electron Source Using Highly-Crystalline Single-Walled Carbon Nanotubes in a Triode Structure with Under-Gate Electrodes

S. Kumon

MEET2 : NOVEL MATERIALS AND COMPONENTS

Plastic Packaging Recycling Using Intelligent Separation Technologies for Materials (PRISM): The Use of Long-Persistence Phosphors

J. Silver

Fabrication of High Performance Electron Beam for Electron Microscope Applications

H. R. Lee

Organic-Inorganic Composite Particles for Imaging Probes

H. Yabu

Combining Polymer Containing Phosphors with Laser Diodes for Horticultural Applications

J. Silver

MEET3 : FUNDAMENTAL COMPONENTS AND PROCESS TECHNOLOGIES

Electron Transparent Graphene for Field Emission Applications

W. I. Milne

Sensors Based on Thin Film Bulk Acoustic Wave Resonators: From Fabrication to Applications in Chemical and Biological Analysis

M. Demiguier-Ramos
Open Collaboration Based on Hands-On Access Fabrication Facility for MEMS ................................................................. 1315
M. Esashi

MEMS-Based Retinal-Imaging System for Visual Health Monitoring ........................................................................... 1319
N. Kaushik

Excellent Temperature Sensing Device with Coplanar a-IGZO TFT Ring Oscillator ...................................................... 1322
A. Rahaman

MEET4 : EL QUANTUM DOTS TECHNOLOGIES – SPECIAL TOPICS OF INTEREST ON LIGHTING AND QUANTUM DOT TECHNOLOGIES

All Inorganic QLED with Metal-Oxide Electron and Hole Injection Layers ........................................................................ 1326
J. Jang
Displays Using Quantum Dot Color Conversion by Inkjet Printing of Quantum Dot Inks .................................................. 1330
B. Tongrada
Efficient QLEDs with Novel Structures ....................................................................................................................... 1334
S. Chen
Quantum-Dot Electroluminescence to Achieve Saturated Colors for REC2020 Compatibility: A Comparative Study of CdSe/ZnS and Cd Free QD Systems ................................................................. 1336
P. Kathirgamanathan
Stability of Quantum Dot Color Pixel Converter Printed by Ink Jetting ............................................................................ 1340
M. Hasegawa

MEETS : EMERGING QUANTUM DOTS AND NANOTECHNOLOGIES – SPECIAL TOPICS OF INTEREST ON LIGHTING AND QUANTUM DOT TECHNOLOGIES

Luminescent Perovskite-Polymer Composite Films for Display .......................................................................................... 1344
J. He
Halide Perovskite Quantum Dots: New Generation Materials for Display Applications ..................................................... 1348
H. Zhong
Innovative Display Technology for Low Vision Aid and Medical Application ................................................................. 1352
M. Sugawara
Interfacial Improvement Using Solution Processed Interlayer on Inverted Perovskite Quantum-Dot Light Emitting Diodes ............................................................................................................................ 1356
H. Jun

POSTER MEETP1 : QUANTUM DOTS AND NANOTECHNOLOGIES – SPECIAL TOPICS OF INTEREST ON LIGHTING AND QUANTUM DOT TECHNOLOGIES

Improved Efficiency of Light-Emitting Diodes Using InP/ZnSe/ZnS Quantum Dots and Mg-Doped Zinc Oxide .................. 1360
H. Sasaki
Criterions and Constrains for the Fundamental Analytical Solutions of Interlaced Microstructures for Display Element and LED .................................................................................................................................................. 1368
C.-J. Ou
Simultaneous Optimization of LED Angular Apodization and Spatial Locations for Performance Metric of Lighting Display ........................................................................................................................................... 1372
C.-J. Ou
Prelude for Hyper-Geometric Function of Cosine nθ Apodization and the Application to Display LED Encapsulates ............................................................................................................................................... 1376
C.-J. Ou
Alcohol-Soluble Quantum Dots for Lighting and Display .................................................................................................. 1379
R. Itoh
Core-Shell Structure Ratio of the Quantum Dots CuGaS2/ZnS and the Light-Emitting Properties ......................................... 1383
R. Itoh

POSTER MEETP2 : NOVEL MATERIALS AND COMPONENTS

Microscopy with Micro-Projector Display for Inspection of Hydrogen Production Rate with TiO2 Electrode Cell .............. 1387
C.-J. Ou
Fabrication of High Performance Electron Beam with Functional Silicon Coated CNT Cold Cathode ............................... 1391
J. S. Kang
Fabrication of Wide Bandgap Anode Layer for Deep UV Lighting with CNT Cold Cathode Electron Beam .................... 1394
S. T. Yoo
Morphological Properties of Nickel Hydroxide Nanosheets Prepared by Solution Growth ............................................. 1397
M. Mikami
Design and Preparation of Optical Film for Viewing Angle Control .................................................................................. 1401
Q. Feng
Synthesis of Zinc-Aluminum Layered Double Hydroxide and Their Structural Properties
S. Motoyama

Phase Recovery from Axial Diffraction Patterns Using Ptychographical Iterative Engine
Y. Wagatsuma

Tunable Tamm Plasmon Devices by Liquid Crystals
H.-C. Cheng

System Dynamic Approach for the Multi-Physics Analysis of Micro-LED
C.-J. Ou

High Performance Active-Matrix Reflective Display Using by Low Driving Voltage PDLC Technology
C.-H. Chen

Design and Research of a Vehicle Mounted Curved Surface Screen
R. Chen

POSTER MEETP3 : EMERGING PROCESS TECHNOLOGIES – SPECIAL TOPICS OF INTEREST ON OXIDE-SEMICONDUCTOR TFT

Influence of Ar/O₂ Plasma on Solution Processed Ga Doped IZTO TFTs
M. N. Naik

WORKSHOP ON DISPLAY ELECTRONIC SYSTEMS

DES1 : VARIOUS VISUALIZATION TECHNOLOGIES

12.3-in. High Resolution (1920xRGBx720) a-Si TFT LCD with Direct-Lit Local-Dimming Backlight System for Automotive Display
C.-Y. Du

Research on Color & Brightness Correction Method and Its Hardware Design for Video Wall Display
T. Wang

Design of Novel IPLD System for Head Mounted Application with Embedded System
Z. Gong

DES4 : VARIOUS AUGMENTED REALITY SYSTEMS

Novel MRI Hyper-Realistic Head-Up Display System for Patient Comfort
T. Sasaki

Virtual Experiments of Augmentation of a Transparent Cockpit
Y. Ueno

Augmented and Diminished Reality: Computational Imaging of Existence and Non-Existence
S. Mori

DES5 : NOVEL DISPLAYS FOR TRANSPORTATION – SPECIAL TOPICS OF INTEREST ON AUTOMOTIVE DISPLAYS

Review of Flight Deck Display Development
K. Funabiki

Efficient Modeling of LED Crosstalk of a Matrix Backlight Unit
M. Schmidt

Design and Fabrication of a High-Bright Sunlight Readable Transparent Head-Up Display for Automotive Application
C.-C. Liao

POSTER DESP1 : DISPLAY ELECTRONIC SYSTEMS

Design of a-Si:H Gate Driver Circuit with Fast Charging and Discharging Capability for High-Resolution Liquid Crystal Displays
P.-T. Lee

Optimization of Flashing Period for Line Display Using Saccade Eyeball Movement
K. Kanazawa

Image Correction in 8K Displays Using AI
M. Hiyama

A 10-Bit Two-Stage DAC with an RDAC-Embedded Op-Amp for TFT-LCD Column Driver IC
C.-W. Lu
POSTER DESP3 : DISPLAY ELECTRONIC SYSTEMS FOR AR/VR – SPECIAL TOPICS OF INTEREST ON AR/VR AND HYPER REALITY

A Hardware Solution of High Resolution and High Frame for Module in VR .......................................................... 1481
J. B. He

WORKSHOP ON FLEXIBLE ELECTRONICS

FLX1 : FLEXIBLE SENSORS AND DEVICES

Atmospheric Spatial-ALD of High Mobility Amorphous Metal Oxide Thin Film Transistors ........................................ 1484
G. Gelinck

Multifunctional Flexible Sheet Sensor Using Printing Technologies ................................................................. 1487
H. Kondoh

Wearable Sensor Technologies for Daily Health Care Monitoring ........................................................................ 1491
S. Nebuya

FLX2/LCT1 : ADVANCED LC TECHNOLOGIES FOR FLEXIBLE DEVICES

Curved LCD and Future Application ...................................................................................................................... 1494
W. M. Huang

Organic LCD: Large Area, Low Cost, High Performance LCDs on Plastic ........................................................... 1497
P. A. Cain

High Quality Organic Thin Film Transistors Fabricated with LC Organic-Semiconductors .................................... 1500
H. Iino

Anisotropic Electrical Conductivity of Nanosegregated LC Thin Films of Polymerizable Perylene Bisimide Bearing a Triethylene Oxide Chain and Cyclotetrasiloxane Rings ........................................................................ 1504
M. Funahashi

FLX3 : FLEXIBLE TFT TECHNOLOGIES

Abnormal Vth Degradation Behavior of the Polycrystalline Silicon Thin-Film Transistors on the Polyimide Substrate .......................................................................................................................... 1508
Y.-D. Ho

Excellent Electrical Performance and Reliability Improvement on a-IGZO-Driven Flexible LCD .............................. 1512
W.-C. Lu

High Mobility InSb Film with Poly-Si TFTs Formed by Laser Annealing for Flexible Advanced System on Polymer .......................................................................................................................... 1515
C. J. Koswaththage

FLX4 : FLEXIBLE AND STRETCHABLE DISPLAYS

Stretchable RGB LED Display with Spiral-Shaped Wiring Technology ................................................................. 1518
H. Ohmae

Foldable Touch AMOLED Integrated with Plastic Window Technologies ................................................................ 1522
S.-T. Yeh

Single Crystalline Silicon CMOS Circuit Fabrication on Plastic Substrate by Meniscus Force Mediated Layer Transfer Technique .............................................................................................................. 1525
R. Mizukami

Room-Temperature Deposition of a Crystallized Dielectric YSZ Film on Glass Substrate Covered with Cellulose Nanopaper ........................................................................................................ 1529
S. Horita

FLX6 : ADVANCED PROCESS AND EVALUATION TECHNOLOGIES – SPECIAL TOPICS OF INTEREST ON LIGHTING AND QUANTUM DOT TECHNOLOGIES

Roll-to-Roll Processing of Functional Films for Flexible Electronics ........................................................................ 1531
J. Fahlteich

Novel Roll-to-Roll Fabrication Processes of Transparent Electrodes on Ultra-Thin Glass ........................................ 1535
T. Furuikawa

Novel Evaluation Method for Flexible OLED Lighting Device ............................................................................... 1539
K. Hyodo
POSTER FLXP1 : FLEXIBLE ELECTRONICS TECHNOLOGIES

Invalidation Mechanism of Flexible OLED/Thin Film Encapsulation Device under Cyclic Bending Test .......................................................... 1543
K. Hu

A Study on Mechanical Test Method Used for Flexible Display Device ................................................................................................................. 1546
Y. Liu

Analysis of Flexible LTPS TFT Stability Under Continuous Outward Sliding Stress .......................................................................................... 1549
B. Yuan

Investigation and Improvement of Cracking Mechanism in Transparent Insulating Film .................................................................................. 1553
K. Umemoto

Roll-to-Roll Fabrication Process of Silver-Nanowire Embedded Transparent Electrode with Light Extraction Layer for OLEDs ........................................ 1557
C. Kim

The Effect of Annealing Temperature on the Optical and Electrical Properties of Different Diameter AgNWs Films ................................................................. 1560
C. Wei

Flexible White/Warm White Hybrid AC Powder Electroluminescent Devices Fabricated by Modified Wet-Stamping and Screen Printing ........................................ 1564
S. Zhang

High Gas Barrier Film for OLED ............................................................................................................................................................................ 1568
K. Taira

Roll-to-Roll Patterning of Reflective Electrode on Planarized Stainless Steel Foil ................................................................................................. 1572
Y. Hagiwara

Solution-Processed Nonvolatile Optical Transistor Memory for Multi-Level Data Storage Devices .................................................................................. 1575
F. Shiono

Proposal of a-Si film Photo-Sensors Integrating with Poly-Si TFT System on Flexible Polymer .............................................................................. 1577
T. Higashizako

Morphological Control of Monomer Aggregation Using Fluororesin Transfer Process for Flexible LC Displays .............................................................. 1580
S. Kawamorita

WORKSHOP ON TOUCH PANELS AND INPUT TECHNOLOGIES

INP1 : AR AND INTERACTIVE SYSTEMS – SPECIAL TOPICS OF INTEREST ON AR/VR AND HYPER REALITY

Lensless Light-Field Imaging with LC Fresnel Zone Aperture ........................................................................................................................................ 1582
K. Tajima

Yet Another Approach for Enhancing Image Quality: Pixel Placement .................................................................................................................................. 1586
J. Akita

Low Resource Visual Display Method Based on Illusion of Eyeball Movement ........................................................................................................ 1589
H. Ando

Media Technologies for Education Workshops ................................................................................................................................................................. 1593
J. Watanabe

INP5 : FINGERPRINT SENSORS AND SECURE DEVICES

Fingerprint Authentication — Systems and Algorithms ........................................................................................................................................ 1596
K. Sumi

Fingerprint Authentication — Sensing Method ......................................................................................................................................................... 1600
E. Sano

Integrated Transparent NFC Antenna on Touch Display ............................................................................................................................................. 1604
Y. Sugita

INP7/UXC6 : PEN AND TOUCH INPUT TECHNOLOGIES

New In-Cell Capacitive Touch Panel with Fine Pitch Sensor for Narrow Passive Stylus and New User Interface .................................................. 1608
F. Gotoh

Drawing in Talking: Using Pen and Voice for Drawing System Configuration Figures in Talking .............................................................................. 1612
X. Xu

The Effect of Edge Targets on Crossing-Based Selection with Direct Touch Input ........................................................................................................ 1616
K. Go

Multi-Mouse Puzzle, an SDG-Based Puzzle Application for Collaborative Learning ................................................................................................. 1620
L. Luo
POSTER INPP1 : TOUCH PANEL

Study of Optimized Design for ESD Test at Touch In-Cell Panel .......................................................... 1624
T.-C. Huang

Novel In₂O₃ Based Transparent Conducting Oxide Material for Touch Screen ........................................... 1627
R. Akiike

Development of Moon Phase Teaching Materials Using VR ................................................................. 1630
S. Sekiya

Author Index
