2017 International Conference on 3D Vision (3DV 2017)

Qingdao, China
10-12 October 2017
2017 International Conference on 3D Vision
3DV 2017

Table of Contents

Message from General Chair xiv
Message from Program Chair xv
Conference Organization xvi
Meta Reviewers xviii
Reviewers xix
Sponsors xxiv

Oral Session 1

DepthSynth: Real-Time Realistic Synthetic Data Generation from CAD Models for 2.5D Recognition 1
Benjamin Planche (Siemens Corporate Technology), Ziyan Wu (Siemens Corporate Technology), Kai Ma (Siemens Healthineers), Shanhui Sun (Siemens Healthineers), Stefan Kluckner (Siemens Mobility), Oliver Lehmann (Siemens Healthineers), Terrence Chen (Siemens Healthineers), Andreas Hutter (Siemens Corporate Technology), Sergey Zakharov (Siemens Corporate Technology), Harald Kosch (University of Passau), and Jan Ernst (Siemens Corporate Technology)

Sparsity Invariant CNNs 11
Jonas Uhrig (Daimler AG), Nick Schneider (Daimler AG), Lukas Schneider (Daimler AG), Uwe Franke (Daimler AG), Thomas Brox (University of Freiburg), and Andreas Geiger (ETH Zürich)

Spotlight Session 1

A Novel Self-Calibration Method for a Stereo-ToF System Using a Kinect V2 and Two 4K GoPro Cameras 21
Yuan Gao (Christian-Albrechts-University of Kiel), Sandro Esquivel (Christian-Albrechts-University of Kiel), Reinhard Koch (Christian-Albrechts-University of Kiel), and Joachim Keinert (Fraunhofer Institute for Integrated Circuits IIS)

4D Temporally Coherent Light-Field Video 29
Armin Mustafa (University of Surrey), Marco Volino (University of Surrey), Jean-Yves Guillemaut (University of Surrey), and Adrian Hilton (University of Surrey)

Dynamic High Resolution Deformable Articulated Tracking 38
Aaron Walsman (University of Washington), Weilin Wan (University of Washington), Tanner Schmidt (University of Washington), and Dieter Fox (University of Washington)
High Dynamic Range SLAM with Map-Aware Exposure Time Control  48
Sergey V. Alexandrov (Vision4Robotics Group), Johann Prankl (Vision4Robotics Group), Michael Zillich (Vision4Robotics Group), and Markus Vincze (Vision4Robotics Group)

Oral Session 2

OctNetFusion: Learning Depth Fusion from Data  57
Gernot Riegler (Graz University of Technology), Ali Osman Ulusoy (MPI for Intelligent Systems Tübingen), Horst Bischof (Graz University of Technology), and Andreas Geiger (MPI for Intelligent Systems Tübingen)

3D Shape Reconstruction from Sketches via Multi-view Convolutional Networks  67
Zhaoliang Lun (University of Massachusetts Amherst), Matheus Gadelha (University of Massachusetts Amherst), Evangelos Kalogerakis (University of Massachusetts Amherst), Subhransu Maji (University of Massachusetts Amherst), and Rui Wang (University of Massachusetts Amherst)

Poster Session 1

Scalable Dense Monocular Surface Reconstruction  78
Mohammad Dawud Ansari (Department of Augmented Vision DFKI), Vladislav Golyanik (Department of Augmented Vision DFKI), and Didier Stricker (Department of Augmented Vision DFKI)

Compact Model Representation for 3D Reconstruction  88
Jhony Kaesemodel Pontes (Queensland University of Technology), Chen Kong (Carnegie Mellon University), Anders Eriksson (Queensland University of Technology), Clinton Fookes (Queensland University of Technology), Sridha Sridharan (Queensland University of Technology), and Simon Lucey (Carnegie Mellon University)

Tracking Radioactive Sources through Sensor Fusion of Omnidirectional LIDAR and Isotropic Rad-Detectors  97
Kristofer Henderson (University of Florida), Kelsey Stadnikia (University of Florida), Allan Martin (University of Florida), Andreas Enqvist (University of Florida), and Sanjeev Koppal (University of Florida)

Best Viewpoint Tracking for Camera Mounted on Robotic Arm with Dynamic Obstacles  107
Radim Tylecek (University of Edinburgh)

Continuous Signed Distance Functions for 3D Vision  116
Simen Haugo (Department of Engineering Cybernetics), Annette Stahl (Department of Engineering Cybernetics), and Edmund Brekke (Department of Engineering Cybernetics)

Interactive 3D Modeling with a Generative Adversarial Network  126
Jerry Liu (Princeton University), Fisher Yu (Princeton University), and Thomas Funkhouser (Princeton University)
How to Refine 3D Hand Pose Estimation from Unlabelled Depth Data? 135
Endri Dibra (ETH Zurich), Thomas Wolf (ETH Zurich), Cengiz Oztireli (Disney Research Zurich), and Markus Gross (ETH Zurich)

Adversarially Parameterized Optimization for 3D Human Pose Estimation 145
Dominic Jack (Queensland University of Technology), Frederic Maire (Queensland University of Technology), Anders Eriksson (Queensland University of Technology), and Sareh Shirazi (Queensland University of Technology)

GSLAM: Initialization-Robust Monocular Visual SLAM via Global Structure-from-Motion 155
Chengzhou Tang (Simon Fraser University), Oliver Wang (Adobe Research), and Ping Tan (Simon Fraser University)

Oral Session 3

GraphMatch: Efficient Large-Scale Graph Construction for Structure from Motion 165
Qiaoodong Cui (University of California), Victor Fragoso (West Virginia University), Chris Sweeney (University of Washington), and Pradeep Sen (University of California)

Fast Incremental Bundle Adjustment with Covariance Recovery 175
Viorela Ila (Australian National University), Lukas Polok (Apple Inc.), Marek Solony (Brno University of Technology), and Klemen Istenic (University of Girona)

Spotlight Session 2

Relative Camera Refinement for Accurate Dense Reconstruction 185
Yao Yao (HKUST), Shiwei Li (HKUST), Siyu Zhu (HKUST), Hanyu Deng (HKUST), Tian Fang (HKUST), and Long Quan (Hong Kong University of Science and Technology)

Line-Based Robust SfM with Little Image Overlap 195
Yohann Salain (LIGM), Renaud Marlet (LIGM), and Pascal Monasse (LIGM)

Batched Incremental Structure-from-Motion 205
Hainan Cui (NLPR), Shuhan Shen (NLPR), Xiang Gao (NLPR), and Zhanyi Hu (NLPR)

Semi-global Stereo Matching with Surface Orientation Priors 215
Daniel Scharstein (Middlebury College), Tatsunori Taniai (RIKEN AIP), and Sudipta N. Sinha (Microsoft Research)

Oral Session 4

Cascaded Scene Flow Prediction Using Semantic Segmentation 225
Zhile Ren (Brown University), Deqing Sun (NVIDIA), Jan Kautz (NVIDIA), and Erik Sudderth (UC Irvine)

Static and Dynamic Objects Analysis as a 3D Vector Field 234
Cansen Jiang (Le2i), Danda Pani Paudel (Computer Vision Lab), Yohan Fougerolle (Le2i), David Foiti (Le2i), and Cedric Demonceaux (Le2i)
Spotlight Session 3

Generalized Pose Estimation from Line Correspondences with Known Vertical Direction  244
Nora Horanyi (Institute of Informatics) and Zoltan Kato (Institute of Informatics)

The Two Lines Light Source (TLLS) 254
Wook Yeon Hwang (Brown University) and Gabriel Taubin (Brown University)

Weakly Supervised 3D Reconstruction with Adversarial Constraint 263
JunYoung Gwak (Stanford University), Christopher B. Choy (Stanford University), Animesh Garg (Stanford University), and Silvio Savarese (Stanford University)

Multiframe Scene Flow with Piecewise Rigid Motion 273
Vladislav Golyanik (DFKI), Kihwan Kim (NVIDIA), Robert Maier (Technical University of Munich), Matthias Nießner (Technical University of Munich), Didier Stricker (DFKI), and Jan Kautz (NVIDIA)

Camera Uncertainty Computation in Large 3D Reconstruction 282
Michal Polic (Czech Institute of Informatics) and Tomas Pajdla (Czech Institute of Informatics)

Probabilistic Object Reconstruction with Online Global Model Correction 291
Jack Hunt (University of Oxford), Victor Prisacariu (University of Oxford), Stuart Golodetz (University of Oxford), Tommaso Cavallari (University of Oxford), Nicholas Lord (University of Oxford), and Philip Torr (University of Oxford)

Multi-label Point Cloud Annotation by Selection of Sparse Control Points 301
Riccardo Monica (University of Parma), Jacopo Aleotti (University of Parma), Michael Zillich (Vienna University of Technology), and Markus Vincze (Vienna University of Technology)

Poster Session 2

Controllable Variation Synthesis for Surface Motion Capture 309
Adnane Boukhayma (Inria) and Edmond Boyer (Inria)

Variational Building Modeling from Urban MVS Meshes 318
Lingjie Zhu (University of Chinese Academy of Sciences; Institute of Automation), Shuhan Shen (University of Chinese Academy of Sciences; Institute of Automation), Lihua Hu (School of Computer Science & Technology), and Zhanyi Hu (University of Chinese Academy of Sciences; Institute of Automation)

High Dimensional Space Model for Dense Monocular Surface Recovery 327
Vladislav Golyanik (DFKI) and Didier Stricker (DFKI)

Fast and Efficient Depth Map Estimation from Light Fields 337
Yuriy Anisimov (DFKI GmbH) and Didier Stricker (DFKI GmbH)

Direct Multichannel Tracking 347
Carlos Jaramillo (CUNY Grad)
Loop-Closure Detection in Urban Scenes for Autonomous Robot Navigation 356

Fabiola Maffra (ETH Zurich), Lucas Teixeira (ETH Zurich), Zetao Chen (ETH Zurich), and Margarita Chli (ETH Zurich)

Fast and Accurate Satellite Multi-view Stereo Using Edge-Aware Interpolation 365

Ke Wang (UNC Chapel Hill) and Jan-Michael Frahm (UNC Chapel Hill)

Registration of 3D Point Clouds Using Mean Shift Clustering on Rotations and Translations 374

Ido Haim Ferencz (University of Haifa) and Ilan Shimshoni (University of Haifa)

Learning Quadrangulated Patches for 3D Shape Parameterization and Completion 383

Kripasindhu Sarkar (University of Kaiserslautern), Kiran Varanasi (Department of Augmented Vision), and Didier Stricker (Department of Augmented Vision)

Symmetry-Aware Façade Parsing with Occlusions 393

Andrea Cohen (ETH Zürich), Martin R. Oswald (ETH Zürich), Yanxi Liu (Pennsylvania State University), and Marc Pollefeys (ETH Zürich)

3D Shape Induction from 2D Views of Multiple Objects 402

Matheus Gadelha (University of Massachusetts Amherst), Subhransu Maji (University of Massachusetts Amherst), and Rui Wang (University of Massachusetts Amherst)

Hierarchical Surface Prediction for 3D Object Reconstruction 412

Christian Häne (UC Berkeley), Shubham Tulsiani (UC Berkeley), and Jitendra Malik (UC Berkeley)

Towards Accurate Marker-Less Human Shape and Pose Estimation over Time 421

Yinghao Huang (Max-Planck-Institute for Intelligent Systems)

3D Object Discovery and Modeling Using Single RGB-D Images Containing Multiple Object Instances 431

Wim Abbeloos (KU Leuven), Esra Ataer-Cansizoglu (Mitsubishi Electric Research Labs), Sergio Caccamo (KTH Royal Institute of Technology), Yuichi Taguchi (Mitsubishi Electric Research Labs), and Yukiyasu Domae (Mitsubishi Electric Corporation)

Reconstructing 3D Human Poses from Keyword Based Image Database Query 440

Mo'taz A. Al-Hami (Hashemite University) and Rolf Lakaemper (Temple University)

Oral Session 5

Real-Time Full-Body Motion Capture from Video and IMUs 449

Charles Malleson (University of Surrey), Andrew Gilbert (University of Surrey), Matthew Trumble (University of Surrey), John Collonosse (University of Surrey), Adrian Hilton (University of Surrey), and Marco Volino (undefined)

Learning Human Motion Models for Long-Term Predictions 458

Partha Ghosh (ETH Zurich), Jie Song (ETH Zurich), Emre Aksan (ETH Zurich), and Otmar Hilliges (ETH Zurich)
Spotlight Session 4

Performance Evaluation of 3D Correspondence Grouping Algorithms 467
Jiaqi Yang (School of Automation), Ke Xian (School of Automation), Yang Xiao (School of Automation), and Zhiguo Cao (School of Automation)

Spatial Maps: From Low Rank Spectral to Sparse Spatial Functional Representations 477
Andrea Gasparetto (Ca’ Foscari University of Venice), Luca Cosmo (Ca’ Foscari University of Venice), Emanuele Rodolà (Sapienza University of Rome), Michael Bronstein (USI Lugano), and Andrea Torsello (Ca’ Foscari University of Venice)

Efficient Model-Free Anthropometry from Depth Data 486
Thomas Probst (ETH Zürich), Andrea Fossati (ETH Zürich), Mathieu Salzmann (EPFL Lausanne), and Luc Van Gool (ETH Zürich)

Robust 3D Human Motion Reconstruction via Dynamic Template Construction 496
Zhong Li (University of Delaware), Yu Ji (Plex-VR), Wei Yang (Plex-VR), Jinwei Ye (Louisiana State University), and Jingyi Yu (University of Delaware)

Oral Session 6

Monocular 3D Human Pose Estimation in the Wild Using Improved CNN Supervision 506
Dushyant Mehta (Max Planck Institute for Informatics), Helge Rhodin (EPFL), Dan Casas (Universidad Rev Juan Carlos), Pascal Fua (EPFL), Oleksandr Sotnychenko (Max Plack Institute for Informatics), Weipeng Xu (Max Plack Institute for Informatics), and Christian Theobalt (Max Plack Institute for Informatics)

Efficient Deformable Shape Correspondence via Kernel Matching 517
Matthias Vestner (TU Munich), Zorah Lähner (TU Munich), Amit Boyarski (Technion), Or Litany (Tel Aviv University), Ron Slossberg (Technion), Tal Remez (Tel Aviv University), Emanuele Rodola (Sapienza University of Rome), Alex Bronstein (Technion), Michael Bronstein (USI Lugano), Ron Kimmel (Technion), and Daniel Cremers (TU Munich)

Spotlight Session 5

Using Learning of Speed to Stabilize Scale in Monocular Localization and Mapping 527
Duncan Frost (University of Oxford), David Murray (University of Oxford), and Victor Prisacariu (University of Oxford)

SEGCloud: Semantic Segmentation of 3D Point Clouds 537
Lyne Tchapmi (Stanford University), Christopher Choy (Stanford University), Iro Armeni (Stanford University), JunYoung Gwak (Stanford University), and Silvio Savarese (Stanford University)

Fast Multiview 3D Scan Registration Using Planar Structures 548
Uttaran Bhattacharya (Indian Institute of Science), Sumit Veerawal (Indian Institute of Science), and Venu Madhav Govindu (Indian Institute of Science)
Simultaneous Hand Pose and Skeleton Bone-Lengths Estimation from a Single Depth Image  557………………
Jameel Malik (DFKI GmbH), Ahmed Elhayek (DFKI GmbH), and Didier Stricker (DFKI GmbH)

3D Object Classification via Spherical Projections  566………………………………………………………………………..
Zhangjie Cao (Tsinghua University), Qixing Huang (University of Texas at Austin), and Ramani Karthik (Purdue University)

Monocular Depth from Small Motion Video Accelerated  575………………………………………………………………………..
Christopher Ham (The University of Queensland), Ming-Fang Chang (Carnegie Mellon University), Simon Lucey (Carnegie Mellon University), and Surya Singh (The University of Queensland)

Poster Session 3

Line Association and Vanishing Point Estimation with Binary Quadratic Programming  584………………………
Gim Hee Lee (National University of Singapore)

Scene Semantic Reconstruction from Egocentric RGB-D-Thermal Videos  593…………………………………………………..
Rachel Luo (Stanford University), Ozan Sener (Stanford University), and Silvio Savarese (Stanford University)

Single View Parametric Building Reconstruction from Satellite Imagery  603…………………………………………………..
Ke Wang (UNC Chapel Hill) and Jan-Michael Frahm (UNC Chapel Hill)

Accurate Calibration of Multiple Pan-Tilt Cameras for Live Broadcasts  612…………………………………………………..
Masanori Kano (Japan Broadcasting Corporation (NHK)), Hidehiko Okubo (Japan Broadcasting Corporation (NHK)), Masaki Takahashi (Japan Broadcasting Corporation (NHK)), Kensuke Ikeya (Japan Broadcasting Corporation (NHK)), Kensuke Hisatomi (Japan Broadcasting Corporation (NHK)), and Tomoyuki Mishina (Japan Broadcasting Corporation (NHK))

3D Room Geometry Reconstruction Using Audio-Visual Sensors  621…………………………………………………..
Hansung Kim (University of Surrey), Luca Remaggi (University of Surrey), Philip JB Jackson (University of Surrey), Filippo Maria Fazi (University of Southampton), and Adrian Hilton (University of Surrey)

Barcode: Global Binary Patterns for Fast Visual Inference  630…………………………………………………..
Teng-Yok Lee (Mitsubishi Electric Research Laboratories), Sonali Patil (Purdue University), Srikumar Ramalingam (The University of Utah), Yuichi Taguchi (Mitsubishi Electric Research Laboratories), and Bedrich Benes (Purdue University)

Cross-Modal Attribute Transfer for Rescaling 3D Models  640…………………………………………………..
Lin Shao (Stanford University), Angel X. Chang (Princeton University), Hao Su (Stanford University), Manolis Savva (Princeton University), and Leonidas Guibas (Stanford University)

Point Cloud Registration with Virtual Interest Points from Implicit Quadric Surface Intersections  649…………
Mirza Tahir Ahmed (Queen's University), Joshua A. Marshall (Queen's University), and Michael Greenspan (Queen's University)

Motion Compensation for Phase-Shift Structured-Light Systems Based on a Total-Variation Framework  658………………
Jonathan Boisvert (National Research Council Canada), Marc-Antoine Drouin (National Research Council Canada), Louis-Guy Dicaire (National Research Council Canada), Michel Picard (National Research Council Canada), and Guy Godin (National Research Council Canada)
Matterport3D: Learning from RGB-D Data in Indoor Environments 667.................................
Angel Chang (undefined), Angela Dai (undefined), Thomas Funkhouser (undefined), Maciej Halber (undefined), Matthias Niebner (undefined), Manolis Savva (undefined), Shuran Song (undefined), Andy Zeng (undefined), and Yinda Zhang (undefined)

Joint 3D Reconstruction of a Static Scene and Moving Objects 677.................................
Sergio Caccamo (KTH Royal Institute of Technology), Esra Ataer-Cansizoglu (Mitsubishi Electric Research Laboratories), and Yuichi Taguchi (Mitsubishi Electric Research Laboratories)

Fuzzy Correspondences for Robust Shape Registration 686.................................
Abhishek Kolagunda (University of Delaware), Scott Sorensen (University of Delaware), Philip Saponaro (University of Delaware), Wayne Treible (University of Delaware), Chandra Kambhamettu (University of Delaware), and Kelly Sherbondy (Army Research Lab)

Author Index 696.................................
