74th Annual Vertical Flight Society Forum and Technology Display 2018 (FORUM 74)

The Future of Vertical Flight

Phoenix, Arizona, USA
14 - 17 May 2018

Volume 1 of 5

# TABLE OF CONTENTS

**VOLUME 1**

## TECHNICAL SESSION A

### ADVANCED VERTICAL FLIGHT I – AIRCRAFT DESIGN I

Assessing the Impact of Distributed Electric Propulsion On VTOL Aircraft Design & System Effectiveness ............................................. 1  
Daniel Schrage, Apinut Sirirojvisuth, Kaydon Stanzione  

Models and Methods at ONERA for the Presizing of eVTOL Hybrid Aircraft Including Analysis of Failure Scenarios ............................................................................................................................................................................................................ 12  
Pierre-Marie Basset, Philippe Beaumier, Biel Oturn, Gabriel Reboul, Binh Dang Yu  

A Proposed Approach to Studying Urban Air Mobility Missions Including an Initial Exploration of Mission Requirements .................................................................................................................................................................................................... 27  
Michael Patterson, Kevin Antcliff, Lee Kohlman  

Tiltwing Multi-Rotor Aerodynamic Modeling in Hover, Transition and Cruise Flight Conditions ................................................................. 46  
Giovanni Drouandi, Monica Syl, Geoffrey Bower  

Using Liquid Natural Gas Fuel to Cryogenically Cool and Enhance a Hybrid Electric Aircraft Power System ............................................. 62  
Christopher Snyder, Lee Kohlman  

Chezoia: 24-Hour Hovering Machine Conceptual Design ........................................................................................................................... 69  
Andrew Dallas, Scott Jordan  

Elysium: 24-Hour Hovering Machine Conceptual Design ......................................................................................................................... 133  
Daniel Escobar, Brent T. Mills

### AERODYNAMICS I

Effect of Sweep on a Pitching Finite Wing .................................................................................................................................................. 249  
Tony Gardner, Christian Wolf, Christoph Merz  

Unsteady Boundary Layer Transition Measurements on a Rotor in Forward Flight .................................................................................................................................................................................................................. 264  
Austin Overmeyer, Christian Wolf, James Heinick  

The Tip Vortex-System of a Four-Bladed Rotor in Dynamic Stall Conditions ........................................................................................................................................................................................................ 275  
C. Christian Wolf, Johannes N. Braudmann, Wolfgang Sauber, Till Schwermer, Markus Raffel  

Three-Component Reverse Flow Measurements on a Mach-Scale Rotor at High Advance Ratios ........................................................................................................................................................................................................ 290  
Luke Smith, Andrew Lind, Anya Jones, Xing Wang, Andre Bauknecht  

Heavy Class Helicopter Fuselage Model Performance Improvements by Using Vortex Generators .............................................................................................................................................................................................................. 301  
Fabrizio De Gregorio  

CFD Pressure/Airload Correlation with Experimental Data on a Slowed Mach-Scaled Rotor at High Advance Ratios ........................................................................................................................................................................................................ 312  
Xing Wang, Yong Su Jung, James Baeder, Inderjit Chopra  

Aerodynamic Investigation of a Helicopter Rotor Hovering in the Vicinity of a Building ........................................................................................................................................................................................................ 321  
Ronan Boisard

### CRASH SAFETY

Evaluation of Lumbar Load Criterion Based on Test Data and Field Performance Results .............................................................................................................................................................................................................. 333  
Marvin Richards  

Anthropomorphic Test Device Response to Vertical Impact .............................................................................................................................................................................................................. 341  
Joseph Pellemiere, Amanda Taylor  

The Evaluation of Anthropomorphic Test Device Response Under Vertical Loading .............................................................................................................................................................................................................. 351  
Justin Littell, Martin Annett  

A Novel Zero/Zero Active Safety System for eVTOL Aircraft .............................................................................................................................................................................................................. 369  
Roger Sloman, Simon James Scott  

Preliminary Assessment of Bird Strike on Low Noise Rotor Blade Sections .............................................................................................................................................................................................................. 374  
Martin Annett, Mike Pereira  

Strength Evaluation of a Sliding Helicopter Fairing/Door Subject To Load and Impact Velocity Interaction .............................................................................................................................................................................................................. 385  
David Dayan, Alice Vagnot

### DYNAMICS I

Numerical Evaluation of Gust Loads on Tiltrotor .............................................................................................................................................................................................................. 395  
Alberto Rigo, Giuseppe Quaranta, Marco Favale, Alberto A. Trezzini  

A Comprehensive Aeroservoelastic Approach to Detect and Prevent Rotorcraft-Pilot Coupling Phenomena in Tiltrotors .............................................................................................................................................................................................................. 408  
Francesca Colombo, Vincenzo Muscarello, Giuseppe Quaranta, Pierangelo Masarati
Aeroelastic Stability Analysis of Stiff-in-plane Hingeless Rotors
Hao Kang, Bryan Glaz

Aeromechanical Loads on a Mars Coaxial Helicopter
Daniel Escobar, Indejeth Chopra, Anubhav Datta

Modeling, Development, and Testing of Fluidic Flexible Matrix Composite Blade Dampers
Matthew Krott, Edward Smith, Jose Palacios, Christopher Rahn

Helicopter Rotor Infield Tracking with a Trailing-edge flap and Adaptive Closed-loop Regulator
Lan Ding, Jinwei Shen

MANUFACTURING TECH I

Utilization of Factory Physics in Reducing Span and Variation in Production
Chandrashekhar Tiwari, Gregg Skinner

Machine Utilization from Spindle Data Using MTConnect
Pedro Daniel Urbina Coronado, Mahmoud Parto, Wafa Louhichi, Thomas Kurfess

Multi-Axis Voxel-Based CNC Machining of Centrifugal Compressor Assemblies
Thomas Kurfess, Roys Lynn, Kyle Saleeby, Tommy Tucker, Christopher Saldana, Chelsea Silberglied

Machining Cold Spray Additive Manufacture for the UH-60 Main Transmission Sump
Wesley Cass

Thermomechanical Modeling of a Friction Stir Welding Process
Grzegorz Luty, Agata Wrzoska, Jacek Andres, Tomasz Galaczynski

Advanced Techniques for the Fabrication of Airframe Structures Using Innovative Friction Stir Welding (FSW) Technology
Zhichao (Charlie) Li, Justin Sims, Blake Ferguson, Jason Petty, Treven Baker

MINING & SIMULATION

Evaluation of Pilot Workload for Helicopter Optimal Autorotation Landing Procedure in One Engine Failure
Xufei Yan, Renliang Chen

Transfer-of-Training: From Fixedand Motion-base Simulators to a Light-Weight Helicopter
Davide Fabbro, Francesco Bufalo, Giulia D’Intino, Stefano Geluardi, Carlo Andrea Gerboni, Mario Olivari, Heinrich H. Bulhoff

Preliminary Progress in Establishing Motion Fidelity Requirements for Maritime Rotorcraft Flight Simulators
Wajih Ahmed Memon, Mark D White, Ian Owen, Sophie Robinson

Towards Gaussian Process Models of Complex Rotorcraft Dynamics
Ryan Jackson, Michael Jump, Peter Green

Achieving High Performance Aircraft Modeling in Operational Analysis Software using a Minimum Complexity Model
Christopher Colosi, Jim Keller, Gregory Nichols

A New Modeling Framework to Predict Helicopter Dynamic Systems Loads
Damien Guivarch, Emmanuel Mermoz, Yoan Marin, Marc Sartor
VOLUME 2

TECHNICAL SESSION B

PROPULSION I

Structural Dynamics of a Dual Clutch Offset Compound Gear Transmission with Electro-Magnetically Actuated Engagement
Hans Desmidt, Edward Smith, Robert Bill

Results of NASA Technical Challenge to Demonstrate Two-Speed Drive for Vertical Lift Vehicle
Robert Handschuh, Timothy Kranz, Gary Roberts

Two-Speed Rotorcraft Research Transmission Power-Loss Associated with the Lubrication and Hydraulic Engagement
Mark Stevens, Mark Valco, Kelsen Laberge

Rotating Feed-Through Design Feature
Hans Desmidt, Edward Smith, Robert Bill, Hans Desmidt

Mass and Kinetic Analysis of Compound Split with Simulation of the Shifting Process for Variable Rotor Speed
Hans Amri, Katharina Hartenthaler, Michael Weigand

Design Space Exploration of Pericyclic Transmission with Counterbalance and Bearing Load Analysis
Zachary Cameron, Edward Smith, Robert Bill, Hans Desmidt

Design of a High Power Density Pericyclic Drive Prototype for Testing at NASA Glenn Transmission Test Facility
Tammay Mathur, Edward Smith, Robert Bill, Hans Desmidt

Dynamic Analysis of Rotorcraft Planetary Gears Using a Finite Element/Contact Mechanics Model
Christopher Cooley, Adrian Hood

ADVANCED VERTICAL FLIGHT II

Effect of Rotor Geometry on UAV-scale Cycloidal Rotor Hover Performance
Adam Kellen, Moble Benedict

A Truly Biomimetic Hover-Capable Flapping Wing Robot
David Coleman, Moble Benedict

Tip Vortex Measurements on a Cycloidal Rotor Blade at Ultralow Reynolds Numbers
James McElreath, Moble Benedict, Nathan Tichner

Researching the Cruise Potential of the Arc Wing VTOL Concept
William Bertelsen

Low Reynolds Number Airfoil Evaluation for the Mars Helicopter Rotor
Wiosl Koning, Ethan Romander, Wayne Johnson

A Preliminary Systems Engineering Study on a Concept for Mars Exploration with an Unmanned Autonomous Vehicle and Ground Rover Configuration
Michel Lucardia, Dongin Park, Srujal Patel, Daniel Schrage

AERODYNAMICS II

Wake Characterization of a Free-flying Model Helicopter in Ground Effect
Clemens Schwartz, Andre Busknecht, Markus Raffel, Stephan Mailander

PIV and Performance Measurements on Rotors Hovering above Inclined Surfaces
Joseph Milluzzo, Scott Drayton, Aaron Martinez, Scott Davids

Analysis of Rotor Configuration and Ground Proximity Effects on Hover Performance
Todd Quackenbush, Glen Whitehouse, Benjamin Silbaugh, Michael Yu

Interactional Aerodynamic Insight Obtained from Wind Tunnel Testing and Computational Analysis
Peter Lorber, Byung-Young Min, Brian Wake, Charles Berezn

Full-Scale Reynolds Number Experiment on Interactional Aerodynamics between Two Model Rotor Hubs and a Horizontal Stabilizer
Leonard Metkowski, David Reich, Nicholas Jaffa, Sven Schmitz, Kyle Sinding

RACER High-speed Demonstrator: Rotor and Rotor-head Wake Interactions with Tail Unit
Caroline Liemandt, Iham Salah El Din, Thomas Renaud, Raphael Fukari

CFD Predictions of Rotor-Fuselage Interactions Using Laminar-Turbulent Transition Modeling
Ashwin Parwanti, James G. Coder

DYNAMICS II

GRC1: An Advanced Five-Bladed Bearingless Main Rotor – Dynamics and Acoustics from Draft to Flight Test
Adrian Kast, Sascha Schneider, Raphael Ramser, Oliver Dieterich, Martijn Priems, Martin Hollands

Active SARIB®: A New Generation of Suspension for Helicopters
Paul Cranga, Jeremy Jouve, Yan Skladanek

Achieving Near Zero N/Rev Vibration with Zero-Vibe™ Technology
Michael Monico, Daniel Kakaley, James Diottavio

Evaluating Disruptive Tuned Mass Vibration Attenuators in Rotary Wing Applications
Christopher Duling, Jeffrey Lindner
Coupled Vibration Prediction of Rotor-Airframe-Drivetrain-Engine Dynamics ................................................................. 987
Vibration Rating of Medical Helicopters ......................................................................................................................... 1000
Automated Operational Modal Identification of a Rotor Blade ...................................................................................... 1012

HANDLING QUALITIES I

Further Development and Piloted Simulation Evaluation of the Break Turn ADS-33 Mission Task Element .................. 1026
Hong Xin, Joseph F. Horn, Roy L. Brewer, David H. Klyde, Carl R. Ott, Cody E. Fegely, Paul D. Ruckel, Frank P. Conway, Sean P. Pitoniak, William C. Fell, James M. Rigby, Ray Mulato, P. Chase Schulze, Christopher L. Blanken

Further Development and Evaluation of a New High-Speed Acceleration / Deceleration ADS-33 Mission Task Element ................................................................................................................................. 1042
Roy Brewer, Hong Xin, Joseph F. Horn, David H. Klyde, Carl R. Ott, Frank Conway, Cody E. Fegely, Paul D. Ruckel, Sean P. Pitoniak, Ray Mulato, William C. Fell, James M. Rigby, P. Chase Schulze, Chris L. Blanken

Piloted Simulation Evaluation of Attitude Capture and Hold MTEs for the Assessment of High-Speed Handling Qualities ...................................................................................................................................................... 1054
David Klyde, Paul Ruckel, Hong Xin, Roy Brewer, Joe Horn, Sean P. Pitoniak, Cody E. Fegely, Frank Conway, Carl R. Ott, P. Chase Schulze, James Rigby, William C. Fell, Ray Mulato, Chris L. Blanken

Piloted Simulation Evaluation of Tracking MTEs for the Assessment of High-Speed Handling Qualities .................. 1068
David Klyde, Paul Ruckel, Hong Xin, Roy Brewer, Joe Horn, Sean P. Pitoniak, Cody E. Fegely, Frank Conway, Carl R. Ott, P. Chase Schulze, James Rigby, William C. Fell, Ray Mulato, Chris L. Blanken

Model Predictive Path Integral Approach for Trajectory Guidance of Rotorcraft Shipboard Landing ..................... 1094
J. V. R. Prasad, David Guerrero, Vinodhini Comandur, Robert Walters

A Cueing Set For Piloted Approach And Hover In Simulated Shipboard Environment ....................................................... 1110
James Pritchard, Joe Allen, Kyle Bordner, James Bumbaugh, John Tritschler, David Arteche

Towards Automation of Helicopter Landings on Ship Decks Using Integer Programming and Model Predictive Control ............................................................................................................................................... 1125
Tri Ngo, Cornel Sultanu

MANUFACTURING TECH II

Manufacturing of a Next Generation Active Twist Helicopter Rotor Blade and Experimental Results of Functionality Test ........................................................................................................................................ 1134
Beren Goddard, Christoph Balzarek, Johannes Riemenschneider

Application of Ultra High Speed Laser Cladding Technology for Functional Coatings Deposition ....................... 1145
Adam Dworak, Jaroslaw Sienicki, Piotr Koruba, Piotr Jurczewicz

Implementing Advanced Technologies in the Sand Casting Supply Chain .............................................................. 1151
Heather Woodworth, William Harris Jr.

Additively Manufactured Composite Ply Placement Templates ...................................................................................... 1158
Eric Dunn

Enabling Lower Cost Assembly using Hybrid Additive Manufacturing ...................................................................... 1163
Gregory Biza, Manish Kamal

MODELING & SIMULATION II

CFD Analysis For Flexible Flapping Wing In Hover Flight .............................................................................................. 1169
Xuan Yang, Mobile Benedict, Camli Badrya, James Lanford

Orthogonal Vortex-Rotor Interference: Rotor Trim and Blade Flapping ........................................................................ 1179
Berend G. Van Der Wall

Development of Finite State-Inflow Models for Multi-Rotor Configurations using Analytical Approach ............. 1189
Feyzae Guner, Yong-Soo Kang, J. V. R. Prasad, David Peters, Chengjian He

Accurate State-Space Inflow Modeling for Flight Dynamics and Control of a Coaxial-Pusher Rotorcraft .......... 1212
Seun Hersey, Roberto Cel, Onurkul Juhaz, Mark Tischler

Full-Envelope Stitched Simulation Model of a Quadcopter Using STITCH ................................................................. 1230
Eric Tobias, Mark Tischler, Frank Sanders

Application of a Heterogeneous CFD Framework Towards Simulating Complete Rotorcraft Configurations ........ 1247
Bumsuk Lee, Yong So Jung, Dylan Jude, Bharath Govindarajan, James Baeder, Jannik Petermann

Aeroelastic Simulation of the Tail Shake Phenomenon ................................................................................................. 1265
Ulrich Schuster, Manuel Kessler, Ewald Kramer

SAFETY

History of System Safety ................................................................................................................................................... 1285
Gary Braman

Advantages of Early System Safety Influence .................................................................................................................. 1293
John Hewitt, Daniel Foito
Functional Safety Management Approach for Certification of Evolving eVTOL Air Taxi Concepts .......................................................... 1300

Nitros: An Innovative Training Program to Enhance Rotorcraft Safety ........................................................................................................ 1314

Giuseppe Quaranta, Max Mulder, Marilena Pavel, Mark White, George Barakos

An Alternative and Safer Approach to Takeoff and Landing Acceptable Means of Compliance (AMC/AC 27&29) and Air Transport Offshore Operations Regulation ........................................................................................................... 1328

Bernard Pierrot, Marco Feller

Development of Powered Lift Airworthiness Standards as Applied to the AW609 Tiltrotor Certification Basis ........................................ 1335

Joseph Schaeffer, David King, William Fraser, Dan Wells

Systems Engineering

Architecture-Driven Assurance for Safety-Critical Avionic Systems ........................................................................................................ 1344

Dan Black

Volume 3

Cybersecurity and Risk Management Framework in Avionics ........................................................................................................................ 1351

James Mavek

Lean Engineering at Elbit Systems Aerospace Division – Implementation Journey ........................................................................................................ 1361

Jack Schongot, Joel Man

Quantifying the Impact of Correlation between Reliability and Prognostics and Health Management on Accuracy, Safety, and Cost ................................................................................................................................. 1369

Vidyanandan Nagaraju, Lance Fonduella, Sathiya Bhattacharya, Eric Spero, Anindyas Ghoshal

Product Line Engineering (PLE) within in a Product Line Enterprise (PLE) leveraging Model-Based System Engineering (MBSE) to Achieve Technologically Enabled Architecture Centric Virtual Integration Process (ACVIP) ......................................................................................................................... 1380

Kendall Pond, Garrett Thurston, David Guzinsky, Mike Adamis-Sampson, Matthew Carter

Technical Session C

Advanced Vertical Flight III

Aerodynamic Installation Effects of Lateral Rotors on a Novel Compound Helicopter Configuration ........................................................... 1390

Tom Stokkermans, Mark Yoskup, Leo Veldhuis, Raphael Fukari, Paul Eglit, Bambang Soemarwoto

Computational and Experimental Investigation of Camber Morphing Airfoils for Reverse Flow Drag Reduction on High-Speed Rotorcraft ........................................................................................................ 1402

George Jacobelli, Thomas Rice, Farhan Gandhi, Michael Amitay

Analysis of a Permanent Magnet Synchronous Motor Coupled to a Flexible Rotor for Electric VTOL ........................................................................ 1417

Brent Mills, Anubhav Datta

Enhancing the Performance of a Quadrotor Biplane Tail-sitter (MBiT) ........................................................................................................... 1431

Brandyn Phillips, Vikram Hrishikeshavan, Inderjit Chopra

Experimental Investigation of Aerodynamic Performance of a Novel Multirotor Tandem Wing Convertiplane .................................................... 1446

Abhishek Abhishek, M. Rama Krishna, Sakshi Gupta, Debojyoti Das

Aerodynamics III – Dynamics III

Aerodynamic Performance of Morphing Blades and Rotor Systems ........................................................................................................ 1458

Juergen Bauke, Suneet Kamar, Amine Abdelmoula, Dominik Komp, Berend Van Der Wall, Benjamin Woods, Vaclav Ondra, Brano Titkus

Shape Optimization of Rotorcraft Airfoils Using a Genetic Algorithm ........................................................................................................ 1478

Jason Stanko, Sven Schmitz, James Coder

A Computational Study on Rotor Interactional Effects for a Quadcopter in Edgewise Flight ........................................................................................................ 1487

Matthew Misiorowski, Farhan Gandhi, Arsalan Oberai

Comparison of Vortex Wake, VVPM and CFD Aeromechanics Computations of the Boeing 222 Proprotor ..................................................................... 1499

Graham Bowen-Davies

Coupling of Rotorcraft Elastic Fuselage with CFD ............................................................................................................................... 1524

Hassan Saberi, Matthew Hasbun, Jeewoong Kim, Ryan Blumenstein

CFD/CSD Aeroelastic Stability Predictions of a Semi-Span Tiltrotor ........................................................................................................ 1536

Ethan Corle, Sven Schmitz, Matthew Floros

The Physics Behind BVI-Noise Reduction in Descent Flight through the Use of Dynamic Active Twist Control .................................................. 1546

Frauke Hoffmann, Jianping Yin, Berend G. Van Der Wall
## CREW STATIONS & HUMAN FACTORS

- **Studying Pilot Cognition in Ship-Based Helicopter Landing Maneuvers** ................................................................. 1560  
  Karen Feigh, Dan Minntra
- **Evaluation of Novel Concepts for Control Takeover using Electronic Coupled Sidesticks** ............................................. 1573  
  Rodolfo Sammiso, Michael Jones, Christian Walko
- **Tactile Cueing System for Degraded Visual Environments** .............................................................................................. 1591  
  Braden McGrath, Hakar Barzinjy, Ganen Ganenswaren, Angus Raptus
- **SPAACE - 3D Audio Support for Confined Area Operations** .......................................................................................... 1598  
  Christian Niemann
- **ARSAD: An Augmented Reality Spatial Auditory Display for Obstacle Avoidance for all Phases of Flight** ....................... 1605  
  Martine Godfroy-Coooper, Joel Miller, Elizabeth Wenzel
- **Multimodal Cueing and Assessment of Pilot Engagement During Low Level Flight** .............................................................. 1631  
  Edward Bachelder, Martine Godfroy-Coooper, Alon Kahana, J. D. Miller, M. Rottem-Hovev
- **Using Touch Screens in a Rotorcraft Environment** ............................................................................................................. 1650  
  Paul Schutte

## HANDLING QUALITIES II

- **Helicopter Drive Train Load Alleviation in Hover by Nonlinear Control** ................................................................. 1661  
  Mark Youkki, Barend-Jan van Bruchem, Marcel van Lierp
- **Load Alleviation Control Design Using Harmonic Decomposition Models, Rotor State Feedback, and Redundant Control Effectors** .................................................................................................................. 1673  
  Umberto Saetti, Joseph F. Horn
- **Time-to-Contact-Based Control Laws for Flare Trajectory Generation and Landing Point Tracking in Autorotation** .......................................................................................................................... 1684  
  Jonathan Rogers, Brian Eberle, Michael Jump, Neil Cameron
- **Modeling and Simulation in Support of Handling Qualities Evaluation of AVX Joint-Multi-Role (JMR) Coaxial Compound Helicopter (CCH)** ................................................................. 1696  
  Chongseok Chang, M. Hasbun, H. Saberi, C. H. James Lindsey, Robert Fornbaugh
- **Analysis of Rotorcraft Pilot Couplings During Active Inceptor Failures** ........................................................................... 1724  
  Mike Jones, Miles Barnett
- **Swashplate Actuator Failure Compensation for UH-60 Black Hawk in Cruise using Horizontal Stabilator** ...................... 1744  
  Praneet Yavatalli, Michael McKay, Jayanth Krishnamurthi, Farhan Gandhi
- **Model-Following Control and Actuators Limits Analysis to Transform Helicopters into Personal Aerial Vehicles** ................. 1758  
  Carlo Andrea Gerboni, Stefano Geluardi, Heinrich H. Buelttboff, Walter Fichter
- **Control Margin Awareness of the AW609 TiltRotor under Asymmetric Aerodynamic Flight Conditions** ......................... 1770  
  Sid Xiao, David Belt, Pietro D’Ettorre, Paul Edwards

## PROPULSION II

- **Evaluation of a Variable Thickness Hybrid Composite Bull Gear** .................................................................................. 1778  
  Kelsen Laberge, Robert Handschuh, Gary Roberts, Joel Johnston
- **Conceptual Design and Analysis of Hybrid Composite Power Gearing in a Fielded Drive System Configuration** ................. 1785  
  Gilbert Morales, Andrea Chavez, Cody Anderson
- **Composites for Advanced Drive Systems, a Systems Analysis - Revolutionary Vertical Lift Technology (RVLT)** .............. 1797  
  Patrick Darmstadt, Mark Robuck
- **Experimental Evaluation of Transmission-Lubrication Technologies** .................................................................................. 1813  
  Jason Fett, Stephen Berkebile, Nikhil Murthy, Kevin Radil, Brian Dykaz, Badames Colon-Rivera
- **Loss of Lubrication Testing** ................................................................................................................................................ 1828  
  Mark Kozachyn, Mark Robuck, Vishwanath Sahay, Sean McIntyre, Aaron Isaacson, Bill Black
- **Temperature Rise and Tooth Surface Evolution of Gearbox under Loss of Lubrication: Experimental and Numerical Investigation** ................................................................................................................ 1841  
  Huan Zhang, F. Sun, Hailing Wu, Zaffir Chaudhry, John Maglieri
- **Gear and Bearing Tribology Contact Simulation for Advanced Propulsion and Drive Systems** ........................................... 1857  
  Lavern Wedeven, Steve Kratz, Graham Wedeven, Robert Homan, Douglas Kratz, Jason Fetty

## STRUCTURES & MATERIALS I

- **Structural Multifunctionality for Weight Reduction** ........................................................................................................ 1867  
  Mark Robuck
- **Optimization of Extension-Twist Coupled Composite Blades for High-Speed Rotorcraft** .................................................. 1874  
  Etna Ferede, Matthew Dipalma, Farhan Gandhi
- **Multiphysics Simulation of Pylon Fluid-Elastomeric Isolators** .......................................................................................... 1888  
  Jonathan Knoll, Michael Selfert, Kevin Cooney, Mark Ott
- **Joint Multi-Role Technology Demonstrator Fuselage Proof Test** ...................................................................................... 1897  
  Dennis McCarthy, Dan Solari, Jasmina Maack, Darryl Toni, Matthew Spies
NUMERICAL ANALYSIS OF ROTOR AEROO-AcouSTIC CHARACTERISTICS FOR ICE DETECTION BASED ON HMB SOLVER

High Fidelity CFD Analyses of Dynamic Stall on a Four-Bladed Fully Articulated Rotor System

AERODYNAMICS IV

Higher-Order Simulation of a Compound Helicopter Using Adaptive Mesh Refinement

ULRICH SCHAUFERLIN, CONSTANTIN OHRLE, MANUEL KESSLER, EWALD KRAMER

HIGH FIDELITY CFD ANALYSES OF DYNAMIC STALL ON A FOUR-BLADED FULLY ARTICULATED ROTOR SYSTEM

AMANDA GRUBB, MARTIN SMITH, ROHIT JAIN, CAMILLE CASTELLS, FRANCOIS RICHEZ

NUMERICAL ANALYSIS OF ROTOR AERO-AcouSTIC CHARACTERISTICS FOR ICE DETECTION BASED ON HMB SOLVER

XI CHEN, QIJUN ZHAO, GEORGE BARAKOS
Engineering Models for Inertially-fixed Forces Caused by Hingeless Rigid Rotors in Non-uniform Inflow: A Problem for Compound Helicopters ................................................................. 2230
Mark Sukhov, James Gregory, Matthew McCrink, Braxton Harter
Impact of Wake Structure Characteristics on Small-Scale Rotor Performance over a Range of Reynolds Numbers .......................................................... 2246
Abhishek Abhishek, Diksha Aggarwal, Rahul Ramanujam, Debopam Das
Performance Measurement of a Novel Dissimilar Coaxial Rotor System ................................................................. 2257

AIRCRAFT DESIGN II

A Handling Qualities Oriented Approach to Rotorcraft Conceptual Design ................................................................. 2267
Giacomo Gerosa, Andrea Zanoni, Pierangelo Miasarati, Simmone Panza, Marco Lovera
The Semi-Coaxial Multirotor ................................................................................................................................. 2277
Harry Smith, Angel Zurev, Richard Green, Eric Gillies
Aerodynamic Optimization of a Small UAS Rotor for a Mission with Hover and Forward-Flight Segments ................................................................. 2286
Nathan Beals
Design Optimization of a Rotor Blade for a Variable Pitch Quadrotor Unmanned Air Vehicle ................................................................. 2300
Abhishek Abhishek, Ramdas Gadekar, Mangal Kothari
Heuristic Discovery of Improved Rotor Designs ......................................................................................................... 2312
Jeff Sinsky, Juan Alonso
Multi-objective Horizontal Stabilizer Optimization Using Genetic Algorithm ................................................................. 2332
Kaan Samsal, Goktug Kocak, Volkan Kargin
Aerodynamic Geometry Optimization of Coaxial Rigid Rotors in Forward Flight ................................................................. 2340
Qijun Zhao, Xin Yuan, Zheng Zhu, Bo Wang

HISTORY

History and Hysteria: The 'True Story' of the 2003 Hofstra University 'From Autogiro to Gyroplane Conference ................................................................. 2350

Robin Test Evaluation ......................................................................................................................................................... 2612
Variable Speed Turbine Technology Development and Demonstration ................................................................. 2627
Heat Transfer Measurements on the Endwall of a Variable Speed Power Turbine Blade Cascade .......................... 2641
High Temperature Ceramic Matrix Composite Materials Research for Next Generation Army Propulsion System 2651
Ring Gear Vibration Suppression via Active Support Struts in a Planetary Gear Transmission ................................. 2667
Magnetic Gearing Research at NASA ........................................................................................................................ 2682
The Jetting Phenomena in Meshed Spur Gears .............................................................................................................. 2696

VOLUME 5

UNMANNED VTOL II

A System for Autonomous Rotorcraft Dual-Lift Flight Research .............................................................................. 2706
Effect of Rotor Cant on Trim and Autonomous Flight Dynamics of a Quadcopter ...................................................... 2724
Post-Rotor-Failure Performance of a Feedback Controller for a Hexacopter ........................................................ 2738
System Identification of a Meso-Scale Twin-Cyclocopter in Hover ........................................................................ 2752
LQR Gain Tuning for On-Demand Performance Using Reinforcement Learning ...................................................... 2762
Control Design for Tracking of Scaled MTE Trajectories on an IRIS+ Quadcopter .................................................. 2772

TECHNICAL SESSION F

ACOUSTICS II

Parametric Design Studies of the Helicopter Rotor Noise using Variable-Fidelity Methods ...................................... 2791
Improvement of Experiment/Computation BVI Noise Comparisons by Use of a Geometrical Method Applied to Data Assimilation ................................................................. 2811
Estimating Helicopter Noise Abatement Information with Machine Learning ......................................................... 2821
Rotocraft External Far-Field Noise Measurement Using a Hot Air Balloon .......................................................... 2835
Helicopter Cabin Noise Reduction Based on Compounded Periodic Struts ........................................................... 2854
Automated Labeling of Helicopter Maintenance Records with Text Classification

John Labarga, Sam Friedman

Improvement of Inspection and Repair Procedures for GE T700-701D Power Turbine Drive Shaft Assembly

Pinning Hardware

Victoria Ramos

STREUCES & MATERIALS III

Development of Techniques for Composite Parts Failure Analysis in Static and Fatigue Mode – Application on Thermoset and Thermoplastic Materials for Rotorcraft Main Rotor Hub Analysis

Melanie Herman, Jean-Marc Besson, Christian Hochard, Jean-Paul Charles, Noel Lahellec, Nassira Boulebbad-Gomez

A Progressive Damage Model for Fatigue Analysis of Woven Fabric Composites

Jim Lu, D. C. Pham, Antsar Rahman, Nam Phan

A Nondestructive Evaluation and Structural Health Monitoring Framework for X-COR Sandwich Composites

Guoyi Li, Rajesh Kumar Neerukatti, Abhishek Rajadas, Adit Chattopadhyav, Daniel Huff

Substantiation by Analysis for Fatigue Tolerance in Bell 525 Metallic Components

Stephen Savage, Siddhartha Mukherjee, Nathan Green

Fatigue Life Prediction of Flaw-Tolerant Damaged Rotorcraft Structures

David Raek, Ricardo Actis, Barna Scabo

Closed Loop Approach to Structural Health Monitoring of Critical Rotorcraft Components

Aarohi Shah, Katelyn Gunderson, Julian Rimoli, Massimo Razzene

UNMANNED VTOL III

Human-intuitable Collision Avoidance for Autonomous and Semi-Autonomous Aerial Vehicles

Sagar Lakhmani, Jack Langelaan, Alan Wagner

Load Distribution Control and Swing Angle Feedback for an Autonomous Dual Lift System with Flight Test Results

Marcos Berrios, Marc Takahashi, Matthew Whalley, Greg Schulein, Luigi Cicolani, J. David Powell

Flight Dynamic Modeling and Control of a Novel Quadrotor Convertiplane Unmanned Air Vehicle

Abhishek Abhishek, Mangal Kohari, Saurav Sinha, Sudhish Raj

Visual Detection of Moving Ground Obstacles for Full-Size Autonomous Aircraft Landing

Lucas De La Garza, Chenhao Han, Vladimir Brajovic

System Identification and Control Law Optimization Applied to the AeroVironment Quantix™ Tail-Sitter UAS

Ondrej Juhaz, Mark Tischler, Henry Won

Design, Analysis and Flight Testing of a High Altitude Synchropter UAV

Aaron Barth, Christian Spieß, Manfred Hajek, Konstantin Kondak

A IPPD Method Conceptual Design for an Unmanned Autonomous Vehicle with a Ring Shaped Configuration for Facilitated Docking and Inducted Charging

Michel Lacerda, Dongjun Park, Srijal Patel, Daniel Schrage
