# TABLE OF CONTENTS

## VOLUME 1

### AIRFLOW

- **Computational Design Support for Double-skin Facades with Concomitant Acoustical Protection and Natural Ventilation Capability** ................................................................. 1  
  *Ardeşir Mahdavi, Josef Lechleitner, Egzon Bajraktari*
- **Effect of Climate Change on Building Performance: the Role of Ventilative Cooling** ................................................................. 8  
  *Maurizio Cellura, Francesco Guarino, Sonia Longo, Marina Mistrutta, Giovanni Tamminia*
- **CFD Assessment of Thermal Comfort and Indoor Air Quality Using Ductless Personalized Ventilation** ................................................................. 17  
  *G.P. Lydon, I. Hischier, J. Hofer, A. Schlueter*
- **High-Resolution Analysis for the Development of TABS in Lightweight Structures** ................................................................. 26  
  *Andrés Gallardo, Geovanna Villacreses, Manuel Almaguer, Andrea Lobato-Cordero, Martín Cordovez*
- **Evaluation of Thermal Comfort in Naturally Ventilated School Classrooms during the Heating Season using CFD** ................................................................. 36  
  *Charalampos Angelopoulos, Malcolm J. Cook, Christopher R. Iddon, Stephen M. Porrít*
- **Annual Characteristics of a Passive Stack Ventilation System with Mechanically Controlled Air Supply Openings** ................................................................. 45  
  *Motoya Hayashi*
- **Fundamental Study of Coupling Methods between Energy Simulation and CFD** ................................................................. 51  
  *Tatsukuro Yamamoto, Akihito Otsuki, Myongyoung Lee, Hideki Kazumato*
- **A Comparison of Methods for Evaluating Ventilation Cooling Potential Building Program Based Climate Analysis for Early Design Decisions** ................................................................. 61  
  *Alpha Yacob Araso, Christoph Beinhart*
- **Design of Stadia for Hot Climates: A CFD and Wind Tunnel Analysis of the Wind Flow over a Saddle-Shaped Roof** ................................................................. 71  
  *Rabina Romponi, Paul Lynch, Giulia Matteoni, Mathe Uzanca, Steve Walker*
- **Validation of Grasshopper-based Fast Fluid Dynamics for Air Flow around Buildings in Early Design Stage** ................................................................. 77  
  *Christoph Wathel, Lukas Bystricky, Aytaç Kuhilay, Ralph Evins, Jan Carmeliet*
- **Predicting the Effectiveness of Wind-Driven Natural Ventilation Strategy for Interactive Building Design** ................................................................. 87  
  *Nari Yoon, Ali Malikawi*
- **Evaluation of Impact of Turbulence Model Choices in CFD for Cp-Values used in Airflow Networks** ................................................................. 95  
  *Jungi Yi, Andrea Frisque, Kendall Bashe*
- **Prediction of Wind Pressure Coefficients in Building Energy Simulation using Machine Learning** ................................................................. 103  
  *Ingyeas Yoo, Elena Melo, Daniel Castola*
- **Experimental and Simulation Study to Improve Operation of a Hybrid Ventilation System in an Institutional Building** ................................................................. 111  
  *Charalampos Vallianos, Sophie Yuan, Andreas Athienitis, Jiwu Rao*
- **The Calibration Process for a CFD Simulated Model of a Naturally Ventilated Auditorium** ................................................................. 120  
  *Julia Thompson, Michael Donn, George Baird*

### BIM

- **Automated Building Data Exchange between BIM and BPS Supporting Building Environmental Assessment Methods (BEAM)** ................................................................. 129  
  *Danny Alfredo Lobos Calquin*
- **Estimating the Indoor Thermal Comfort Deficit in the Social Housing Built in Ecuador by Integrating Building Information Modelling and Geographical Information Systems** ................................................................. 134  
  *Andrés Gallardo, Geovanna Villacreses, Manuel Almaguer, Andrea Lobato-Cordero, Martin Cordovez*
- **Towards an IFC-Modelica Tool Facilitating Model Complexity Selection for Building Energy Simulation** ................................................................. 142  
  *Glenn Reinders, Ando Andriasamamoto, Ralf Klein, Dirk Saeleens*

### BEST PRACTICES

- **Simulation-based Comparison of Robustness Assessment Methods to Identify Robust Low-energy Building Designs** ................................................................. 152  
  *Matthew Horrigan, Edward Murphy, James O’Donnell*
- **Bridging the Environmental and Energy Performance Gap in Buildings Through Simulation, Measurement and Data Analysis** ................................................................. 162  
  *PC Thomas, GS Rao, Justin Wong*
BUILDING PHYSICS

Numerical Analysis of the Impact of Thermal Inertia from the Furniture / Indoor Content and Phase Change Materials on the Building Energy Flexibility .......................................................... 177
Hicham Joura, Per Kivols Heiselberg, Jérome Le Dreau
Thermally Activated Wall System with Latent Heat Thermal Energy Storage – Comparison of 1D and 3D Model .......................................................... 185
Pavel Charvat, Lubomir Klimes, Milan Osty
Estimating the Untapped Cooling Power of Green Walls as Evaporative Coolers for Buildings .......................................................... 191
Arta Yazdanseta, Leslie Norford
Modelling Indoor Environmental Quality in Low Energy Housing .......................................................... 201
Maria del Carmen Bocanegra-Vanez, Paul Strachan, Chris Morgan, Tim Sharp
Mould Growth Assessment of Internally Insulated Advanced Envelopes: A Parametric Study and the Notion of the Multi-variable Design-assessment Charts .......................................................... 211
Mohamad Ibrahimi, Marina Stipetic, Etienne Wurtz, Jürgen Frick
Real-Time Assessment of Human Thermal Comfort Using Image Recognition in Conjunction with a Detailed Numerical Human Model .......................................................... 221
Henning Metzacher, Daniel Wilki, Carolin Schmidt, Jérome Frisch, Christoph van Tcreck
Investigating the Impact of Earth Tubes in an Earthship .......................................................... 231
Verónica Suárez, Terence Williamson, Martin Preney
PCM (Phase Change Material) Optimization Modeling for Passive Cooling in South Texas .......................................................... 241
Bronson Ferster, Hui Shen, Joseph D. Rendall
Energy Analysis of Phase Change Wall Integrated with Night Ventilation in Western China .......................................................... 248
Yan Liu, Jiang Liu, Liu Yang, Luqiang Hou, Yuhao Qiao, Mengyuan Wang
Predicting the Effects of Thermal Mass in 1 Suites using Computational Fluid Dynamics .......................................................... 256
Joshua Tolley, Malcolm Cook
Effect of Environment on the Selection of Phase Change Materials for Building Wallboards using Multi-criteria Decision Methods and Building Energy Simulations .......................................................... 265
David Beltran, Javier Martinez-Gomez, Andrea Lobato-Cordero
Analysis of the Hygrothermal Environment in High-insulation Houses Using Stand-type Radiation Panel System .......................................................... 276
Lee Myonghyang, Akito Ozaki, Yousuke Chiba, Tadasu Ohishi
The Role of Fabric Performance in the Seasonal Overheating of Dwellings .......................................................... 284
Konstantinos Moukas, Eniarti Mercury, Christina J. Hopfe, Malcolm Cook, Jacqueline Glass, Chris Goodier
Dynamic-physical Model to Predict the Performance of a Solar Chimney in a Warm-humid Climate with Different Absorbent Materials .......................................................... 294
Maria del Carmen Bocanegra-Vanez, Paul Strachan, Chris Morgan, Tim Sharp
Identifying a Suitable Climate File for the Moisture Risk Assessment of Internally Insulated Walls Exposed to Solar-Driven Vapour Diffusion .......................................................... 304
Valentina Marrincino, Hector Alhamirano-Medina
A Strategy for Modelling Typical Indoor Climates in Historic Buildings: Moisture Buffering of Massive Walls and Stratification by Heating .......................................................... 310
Lien De Backer, Jelle Laverge, Arnold Janssens, Michel De Paepe
Evaluating the Thermal Performance of Mass Walls Compared to Wood-Framed and Steel-Framed Walls in Residential Buildings using EnergyPlus .......................................................... 320
Vrushali Mendon, Reid Hart, Martha VanGeem
Investigating the Use of Earth Tubes for Passive Cooling and Ventilation through Thermal Modelling .......................................................... 330
M. Akeel Morley
Numerical Investigation of the Hygrothermal Behaviour of a Hemp-Concrete Room: Hysteresis Effect of the Sorption Isotherm and its Temperature Dependency .......................................................... 340
Georges Costantine, Chadi Maalouf, Elias Kinab, Guillaume Polidori
Trombe Wall Nodal Temperature Evaluations with Energy Plus Finite Difference Algorithm and Comparison with Monitored Values .......................................................... 350
M. Ozbeynef, M. Rezaei, U. Atikol

BUILDING STOCK

Extending No-MASS: Multi-Agent Stochastic Simulation for Demand Response of Residential Appliances .......................................................... 359
Vrushali Mendon, Reid Hart, Martha VanGeem
City-Scale Building Retrofit Analysis: A Case Study using CityBES .......................................................... 369
Yaxing Chen, Tianzhen Hong, Mary Ann Piette
The Socio-Economics and Energy Demand – United Kingdom Model (SEED-UK) Understanding the Dynamics, Diversity and Socio-Economics of the UK Domestic Stock .......................................................... 377
Trevor Sweetnam, Catalina Spataru, Mark Barrett
Bottom-up Modeling of Residential Heating Systems for Demand Side Management in District Energy System Analysis and Distribution Grid Planning .......................................................... 387
Michael Kramer, Abhiла Jambaga, Vicky Cheng
Flexible Building Stock Modelling with Array-programming .......................................................... 395
Morten Brøgger, Kim B. Wittchen
Platform for Dynamic National Housing Stock Simulation to Evaluate Decarbonisation Scenarios .......................................................... 405
Gustavo Sousa, Benjamin Jones, Parham A. Mirzaei, Darren Robinson
Inverse and Forward Modeling of New York City Public Buildings for Refurbishment Strategies ........................................ 424
Juergen Schmucker, Ursula Ecker, Johannes Weigl, Mario Orth, Michael Bobker, Honey Berk
Big-data Analysis on Energy Consumption of Office Buildings in Seoul, Korea .............................................................. 432
Ki Uhn Ahn, Han Sol Shin, Cheol Sso Park, Kwang Woo Kim
A Method to Support Multi-Criteria Decision Making for Building Systems Update at Urban Scale ...................................... 440
Kristina Orehoung, Jonas Landolt, Georgios Mierromandis, Akomeno Omu, Danhong Wang, Raphael Wu
Portia Murray, Akomeno Omu, Kristina Orehoung, Jan Carmeliets
Thermal and Economic Efficiency of Progressive Retrofit Strategies for Building Systems by a Statistical Analysis based Tool ................................................................. 459
Lavinia Chiara Tagliaabue, Andrea Giovanni Mainini, Fulvio Re Cecconi, Sebastiano Maltese, Enrico De Angelis, Andrea Zani
Local Energy Mapping for Urban Energy Retrofits ................................................................................................................. 467
Rajat Gupta, Matt Gregg
Sensitivity of Low-Voltage Grid Impact Indicators to Modeling Assumptions and Boundary Conditions in Residential District Energy Modeling ........................................................................... 476
Christina Protopopadaki, Dirk Saelemans
Development of Energy Simulation Models from Smart Meter Data using Inverse Modelling and Genetic Algorithms .......................................................... 485
Daniel Costola, Ana Paula Melo, Loic Jacob
Ardeshir Mahdavi, Farhang Tahmasbi
Development of Reference Building Energy Models for South Korea ........................................................................ 502
Deuk Woo Kim, Yu Min Kim, Sang Hoon Lee, Won Young Park, Young Jin Bok, Sung Kyun Ha, Seung Eon Lee

CALIBRATION

Calibration of a BES Model of an Educational Building with Demand Controlled Ventilation .................................................. 510
Bart Merema, Muhammad Delwati, Maarten Bourgon, Hilde Breesech
A Functional Principal Components Model for Internal Loads in Building Energy Simulation ...................................................... 519
Rebecca Ward, Ruchi Choudhary, Yeonsook Hee, John Aston
Predictive Models of Electrical Energy Use in Office Buildings Due to Plug Loads ................................................................. 528
Ardeshir Mahdavi, Farhang Tahmasbi
Leveraging Zone Air Temperature Data to Improve Physics-Based Energy Simulation of Existing Buildings ................................ 534
Sang Hoon Lee, Tianzhen Hong
CALIBRO: an R Package for the Automatic Calibration of Building Energy Simulation Models .................................................. 542
Filippo Monari, Paul Strachan
Model Tuning Approach for Energy Management of Office and Apartment Settings ............................................................ 552
Lisa Scame, Stéphane Ploix, Pierre Bernard, Etienne Wurtz
Simulation-Based Occupancy Estimation in Office Buildings Using CO2 Sensors ................................................................. 562
Filip Jorissen, Wim Boydels, Lieve Helsen

VOLUME 2

Efficiency and Reliability of Bayesian Calibration of Energy Supply System Models .......................................................... 572
Kathrin Menberg, Yeonsook Hee, Ruchi Choudhary
A Comparison of MCMC Algorithms for the Bayesian Calibration of Building Energy Models for Building Simulation 2017 Conference ........................................................................ 582
Adrian Chong, Khee Poh Lam
Inverse Modeling of Portfolio Energy Data for Effective Use with Energy Managers ............................................................. 592
Honey Berk, Marcos Ascanzi, Michael Bobker
Prediction of Residential Building Demand Response Potential Using Data-Driven Techniques .............................................. 599
Dimitrios-Staros Kapetanakis, Olivier Neu, Donal Finn
Mapping Comfort with the SMART (Spherical Motion Average Radiant Temperature) Sensor ................................................ 610
Eric Teitelbaum, Hongshan Guo, Jake Read, Forrest Meggers
A Calibration Process Focused on Predicting Both Energy Performance and Indoor Thermal Conditions ............................... 618
Saman Mostafavi, Benjamin Fattrell, Robert W. Cox

CODES

Combined Fire Safety and Comfort Study Using Moment Independent and Variance Based Method ........................................ 628
Karim Khan Juhor, Laurent Lemaitre, Maxime Boulinguez, Alain Bastide
Development of an Information Delivery Manual for Early Stage BIM-based Energy Performance Assessment and Code Compliance as a Part of DGNB Pre-Certification ..................................................... 638
Ekaterina Petrova, Iva Romanuska, Martin Stamenov, Kjeld Svid, Rasmus Lund Jensen
Reference Building Approach Combined With Dynamic Simulation in Designing nZEBS .................................................. 648

Streamlining Code Compliance through a Fixed Baseline Approach and Automated Baseline Model Generation .................. 658
Supriya Goel, Michael Rosenberg, Bing Liu, Charles Eley

Developing an OpenStudio Script for Simpler Compliance Validation for the Energy Conservation Code for Buildings in Mexico .................................................. 665
Mauro Contreras-Luzanilla, Fátima Chavarria

Development of Automated Procedures to Generate Reference Building Models for ASHRAE Standard 90.1 and India’s Building Energy Code and Implementation in OpenStudio .................................................. 672
Andrew Parker, Philip Hayes, Subhash Jegi, Vishal Garg, Baptiste Ravache

CONTROLS

Forecasting of Cooling Coil Load using On-Site Forecasts of Outdoor Air Conditions versus Forecasts from Closest Airport .................................................. 677
Mathieu Le Cam, Radu Zmeureanu, Ahmed Daoud, Andrews K. Athinitis

Generalization Approach for Models of Thermal Buffer Storages in Predictive Control Strategies .................................. 687
Jülian Budersan, Arno Dentel

Building Energy Simulation Coupled With Real Data For Enhanced Monitoring Analysis .................................................. 693
Patrick Biggery, Melic Petos-Pierre, Henri-Obara, Romain Brunet, Sophie Marut, Max Boegli

Simulation-Based Monitoring Analysis of Air-Source Domestic Hot Water Heat Pumps .................................................. 701
Caroline Lorz, Romana Markovic, Jérôme Frisch, Christoph van Treenck

A Tool for Evaluating the Performance of Simplified Models for Predictive Control Applications .................................. 710
Trent Hilliard, Lukas Swan

The Effect of Zone Level Occupancy Characteristics on Adaptive Controls .................................................. 720

Towards a Semantically-enabled Control Strategy for Building Simulations: Integration of Semantic Technologies and Model Predictive Control .................................................. 729
P. Delgoshaei, M. A. Austin, A. J. Pertzborn, M. Heidarinejad, V. Chandan

Implementation and Demonstration of a Building Simulation Based Testbed for Assessment of Data Centre Multi-domain Control Strategies .................................................. 739
Vojtech Zavrel, J. Ignacio Torrens, Jan L.M. Hensen

MPCpy: an Open-Source Software Platform for Model Predictive Control in Buildings .................................................. 749
David H. Blum, Michael Wetter

An Open Source Smart Building Energy Management Platform Through Volttron .................................................. 759
Amin Mirakhorli, Bing Dong

Evaluation of Machine Learning Algorithms for Demand Response Potential Forecasting .................................................. 767
Dimi-trios-Stavros Kapetanakis, Despoina Christantoni, Eleni Mangina, Donal Finn

Coupling of Building Data Analysis and Building Simulation – Case Study in Large-scale Complex Building .................................................. 777
Yoshiyuki Shimoda, Katsuki Mitamura, Yuki Mataga, Koki Oshima, Hirohisa Tanaka, Shingo Tanabe

Control Strategies for Building Energy Systems to Unlock Demand Side Flexibility – A Review .................................................. 785
John Claudi, Christian Finck, Pierre Vogler-Finck, Paul Beagon

Liping Wang, Majid Karami

Co-Simulation and Validation of Advanced Building Controls with VOLTTRON™ and EnergyPlus™ .................................................. 801
Charles D. Corbin, Draguna Vrabie, Srinivas Katipamula

Impact of Different Short-term Thermal Energy Storage Strategies on the Performance of an Inverter Controlled Air-to-Water Heat Pump (ATWHP) in Residential Buildings in Belgium .................................................. 811
Hugo Monteyne, Win Beyer, Bernd Ameel, Michel De Paepe

Automated Commissioning of Buildings Heating Systems by Numerical Model Calibration .................................................. 821
Wilfried Thomare, Simon Rouchier, Montha Woloszyn, Eric Francois

DAYLIGHTING

A Framework to Support the Development of Manually Adjustable Light Shelves .................................................. 830
Shamin Javed, Georg Reichard

A New Framework for Residential Daylight Performance Evaluation .................................................. 837
Timur Dogan, Ye Chun Park

Air Pollution and Daylight Availability in the Urban Area: Dynamic Simulation in an Openplan Office in London .................................................. 846
Jiangtao Du, Xin Zhang, Steve Sharples

Speedup Potential of Climate-Based Daylight Modelling on GPUs .................................................. 854
Nathaniel L. Jones, Christoph F Reinhart

Analysis of Worldwide Performance of Façade Systems .................................................. 864
Matthias Werner, Rainer Pfugger, David Geisler-Moroder, Wolfgang Feist

Inter-Model Comparison of Five Climate-Based Daylight Modelling Techniques: Redirecting Glazing/Shading Systems .................................................. 874
Eleonora Brembilla, Dorit A Chi Pool, Christina J Hopfe, John Mandujanic
An Embedded System for Quasi Real-time Lighting Computation based on Sky Monitoring ................................................................. 884
Christina J. Hopfe, Veronica Soebarto, Dru Crawley, Rajan Rawal

Fast and Robust External Solar Shading Calculations using the Pixel Counting Algorithm with Transparency ........................................... 890
Joel Hoover, Timur Dogan

Comparison of Different Glare Indices through Metrics for Long Term and Zonal Visual Comfort Assessment ................................. 899
Anna Maria Atzeri, Francesca Cappelletti, Andrea Gasparella

Modelling and Simulation of Lighting Use Patterns in Office Spaces ............................................................................................. 909
Sara Gilani, William O’Brien

Using HDR Sky Luminance Maps to Improve Accuracy of Virtual Work Plane Illuminance Sensors...................................................... 918
Christian Humann, Andrew McNeil

Validation of the Five-Phase Method for Simulating Complex Fenestration Systems with Radiance Against Field Measurements ................................................................................................................................. 927
David Geisler-Moroder, Eleanor S. Lee, Gregory J. Ward

Evaluating Daylight Glare and Identifying Its Dominant Cause in Computer-Based Office Task Environment ........................................ 936
Jae Yong Suk

Random Forests and Artificial Neural Network for Predicting Daylight Illuminance and Energy Consumption .................................. 943
Muhammad Waseem Ahmad, Jean-Laurent Hippolyte, Monjur Moursheed, Yacine Rezgui

The Potential of Artificial Neural Networks to Model Daylight Harvesting in Buildings Located in Different Climate Zones .................................................................................................................................................. 950
Raphaela Walger da Fonseca, Fernando O. R. Pereira, Konstantinos Papamichael

Simulating Circadian Light: Multi-Dimensional Illuminance Analysis .............................................................................................. 960
Philip H. Ewing, John Haymaker, Eve A. Edelstein

Metamodel-based Dynamic Daylighting Simulation ........................................................................................................................... 969
Dan Hou, Gang Liu, Qi Zhang, Ian Wang

Parametric Study of Window Attachment Impacts on Building Heating/Cooling Energy Consumption ................................................ 978
Jinqing Peng, Jacob Jonsson, Robert Hart, Dragun C. Curcija, Stephen E. Selkowitz

Veiled Facades: Impacts of Patterned-Mass Shades on Building Energy Savings, Daylighting Autonomy, and Glare Management in Three Different Climate Zones ........................................................................ 987
Ihab M.K. Elzayed, Ayesha Batool

DESIGN

Planning Guidelines and Product Development for Air Supply Distribution using Active Overflow Elements in Apartment Buildings .............................................................................................................................................. 997
Elisabeth Sibille, Fabian Ochs, Rainer Pfugger

Impact of Building Design Parameters on Thermal Energy Flexibility in a Low-Energy Building .......................................................... 1004
Lucile Sarrau, Kyriaki Foteinaki, Panagiota Gianniou, Carsten Rode

Analysis on the Influence of Residential Buildings Layout Design on the Heating Energy Consumption in Lhasa ........................................ 1014
En Li, Jiaping Liu, Liu Yeng

Simulation in Support of Zero Net Energy and Resilient Design ...................................................................................................... 1021
Ibone Santiago Trojaola, Nathan Brown, Santosh Philip, Susan Ubbelohde, George Linnos

Analysis of Energy Savings and Peak Demand Reduction from Control Measures for Grocery Stores .................................................. 1030
Weimin Wang, Yulong Xie, Nick Fernandez, Srinivas Katipamula

Analysis of Architectural Façade Elements in Tropical Climates for Daylight, Thermal Comfort and Passive Climatization ................................. 1039
Elizabeth McCormick, J. Alstan Jakubiec, Michael Budig

A Probabilistic Approach Toward Building Energy Performance Design: A Case Study of Roof Design with Uncertainty of Weather ....................................................................................................................................... 1048
Miruzas Hosseini, Bruno Lee

Modeling a Building Energy System for Development of Energy Efficient Systems of Shopping Centers .............................................. 1055
Konstantin Finkbeiner, Paul Mathis, Florian Hintz, Elena Bykhoverkaya

EARLY DESIGN

Connecting Environmental Performance Analysis to Cash Flow Modeling for Financial Valuation of Buildings in Early Design ............................................................................................................................ 1065
Irmak Turan, Andrea Chegut, Christoph Reinhart

A Spatial and Temporal Framework for Analysing Daylight, Comfort, Energy and Beyond in Conceptual Building Design ................................................................................................................................. 1075
J. Alstan Jakubiec, Max C. Dwelling, Oliver Heckmann

EDUCATION

With Regards to Energy Modelling: How Does Students’ Knowledge Compare with Industry Expectations? ........................................... 1085
Luisa Scambia, Sung-Min Hong

Understanding the Differences of Integrating Building Performance Simulation in the Architectural Education System ................................. 1095
Christina J. Hopfe, Veronica Soebarto, Dru Crawley, Rajan Rawal
Teaching Building Simulation to HVAC Engineering Bachelor Students ................................................................. 1103

Gerhard Zweifel

HVAC

Experimental Validation of Above-Floor Tube-and-Plate Radiant Floor Model .................................................. 1111

Sébastien A. Brudeau, Ian Beausoleil-Morrison, Michael Kammer

Assessment of an Internal Combustion Engine Micro-CHP Operation for Different Office Buildings Performance Scenarios ........................................................................................................... 1121

Jessica Leo, Romain Bonabe de Rouge, Valentin Gavan, Pascal Stahat, Dominique Marchio

Control Strategies for Geothermal Heat Pump Systems in Combination with Thermal and Electrical Storage Units .......................................................... 1131

Arno Demel, Christina Betzold

VOLUME 3

Multi-split Type Gas-Engine-Driven Heat Pump System Model to Estimate Performance in Low Temperature and High Humidity Conditions in Mid-winter .......................................................................................... 1138

Eisuke Togashi

Multi-objective Sizing Optimization of Borehole Heat Exchangers ........................................................................ 1146

Seung-Hoon Park, Byung-Ki Jeon, Yong-sung Jang, Eui-jong Kim

A Parametric Study of a Detailed Solar Combi-System Coupled to a Near Zero Energy Building .......................................................... 1153

Jérémy Bois, Laurent Moru, Etienne Wurz

Inverter-Driven Heat Pumps for Space Heating: Comparisons of Air-to-Water and Air-to-Air Units .............................................................. 1162

Andrea Prada, Paolo Baggio

Simple Flexibility Factor to Facilitate the Design of Energy-flex-buildings ............................................................. 1168

Anna Marszal-Pomianowska, Jakob Stoustrup, Joakim Widén, Jérôme Le Driéan

Study on Thermal Load Calculation for Ceiling Radiant Cooling Panel System ......................................................... 1176

Sei Ito, Yasunori Akashi, Jongyeon Lim

Application of Support Vector Machines for Predicting the Performance of Air-Source Domestic Hot Water Heat Pump Systems .............................................................................................................................. 1185

The Impact of Electrical Load Shifting Strategies on Storage Capacity and Service Provision of Domestic Hot Water Systems in Residential Buildings .................................................................................. 1195

D. Marini, R.A Buswell, C.J Hopfe

A New Control Strategy for High Thermal Mass Radiant Systems ............................................................................. 1204

Paul Rafferty, Carlos Duarte, Stefano Schiavon, Fred Bauman

Tiantchen Hong, Kaiyu Sun, Rongpeng Zhang

A Bottom-up Method to Assess Energy Consumption of Main Departments in Five-star Hotels in China .................. 1222

Meiwei Qi, Yuchen Shi, Xianfeng Li

Assessing Combined Object and Mutual Shading on the Performance of a Solar Field ............................................. 1232

Jouri Kanters, Henrik Davidson

Lei Xia, Zhenjun Ma, Georgios Kokogiannakis

Performance Maps for the Control of Thermal Energy Storage .................................................................................... 1246

Christian Finck, Rongping Li, Wim Zeiler

Flexibility Quantification for Building Energy Systems with Heat Pumps ...................................................................... 1253

Sebastian Stinner, Kristian Huchleman, Dirk Müller

Energy Performance of Membrane Energy Recovery Ventilation in Combination with an Exhaust Air Heat Pump ........................................................................ 1263

Fabian Ochs, Martin Hauer, Michele Bianchi Janetti, Siegèle Dietmar

Fabian Ochs, Marco Magni, Michele Bianchi Janetti

The SOLCR Energy Positive House: Whole System Simulation .................................................................................. 1280

Philip Jones, Xiaojun Li, Ester Coma, Jo Patterson

Simplified Models of Fault Effects on Unitary Air-Conditioning Equipment for use in Building Simulation Tools ......................................................................................... 1285

David P. Yuill, Mehdi Mehrabi

Influences of Hot Water Tank States and the Order of Test Days to Gain the Annual Efficiency of Heat Pump Systems Evaluated Using Modelica ........................................................................................................ 1293

Philipp Mehrfeld, Kristian Huchleman, Dirk Müller

Sensitive Analysis of Passive Dehumidification System using Solar Heat ...................................................................... 1299

Haksung Lee, Akihito Ozaki, Myonghyang Lee

A Method for Automated Generation of HVAC Distribution Subsystems for Building Performance Simulation ........................................................................ 1308

Aurelien Bres, Florian Judex, Georg Suter, Pieter De Wilde

Laurent Georges, Tomasz Iwanek, Martin Thaufffeld

Comparison of Three Random Forest Models of a Chiller System .............................................................................. 1328

Han Sol Shin, Choi Soo Park
Sensitivity Analysis of Visual and Thermal Parameters for Energy Savings: Combining Illuminance and Temperature Set-Points for Possible Trade-Offs .............................................................. 1573
Gloria Chiuezzo, Mathieu Poullier, Joshua Pereira, Jan Wiendold, Marilynly Anderson

Scaling Methods for Dynamic Building System Simulation in an HVACSIM+ Environment .......................................................... 1583
Zhelun Chen, Jin Wen, Anthony Kearsey, Amanda Pertzborn

Transfer Operator Based Approach for Optimal Sensor Placement Under Uncertain Operating Conditions .................................................. 1590
Himanshu Sharma, Anthony D. Fontanini, Umesh Vaidya, Baskar Ganapathysubramanian

OCCUPANTS

The Influence of the Variation in Occupancy Patterns on Domestic Energy Simulation Prediction: A Case Study in Shanghai ........................................................................................................................................ 1599
Alas Al-Shaika, Ben Corsford

Consideration of Inhabitants’ Diversity in Building Performance Simulation: Does It Matter? ................................................................................................................................. 1606
Mahmneh Taheri, Farhang Tabanasehi, Ardehshir Mahdavi

Multi-agent Stochastic Simulation of Occupants for Building Simulation ................................................................................................................................. 1613
Jacob Chapman, Peer-Olaf Siebers, Darren Robinson

A Field Study of Thermal Comfort in Open-plan Office Buildings during Transition Seasons in Harbin ...................................................................................... 1661
Yunsong Han, Xuejuan Sun, Cheng Sun

Towards a Comprehensive Tool to Model Occupant Behaviour for Dwellings that Combines Domestic Hot Water Use with Active Occupancy .......... 1668
Jean Rouleau, Alfonso Ramallo-González, Louis Gosselin

Implementing Occupant Behaviour in the Simulation of Building Energy Performance and Energy Flexibility: Development of Co-Simulation Framework and Case Study ................................................................................................................................. 1677
Rongling Li, Feng Wei, Yang Zhao, Winn Zeller

Development of Realistic Water Draw Profiles for California Residential Water Heating Energy Estimation ................................................................................. 1685
Neal Kraus, Bruce Wilcox, Jim Lutz, Chip Barnaby

Investigation of a Short-term Prediction Method of Occupancy Presence in Residential Buildings ................................................................................................................................. 1694
Zhaoxuan Li, Bing Dong

Water Use Behavior in Single-Family Homes: A Case Study in Texas ................................................................................................................................. 1702
Peng Xue, Tianzhen Hong, Bing Dong

Simulation Assisted Monitoring of a Multi-Family House – a Renovation Case Study ................................................................................................................................. 1709
Dietmar Siegle, Georgios Dermertzi, Eleonora Leonardi, Fabian Och, Alejandro Mejzly

Air Conditioning Usage and Environmental Control Behaviour in Residential Contexts ................................................................................................. 1719
Jungwoo Kim, Richard de Dear, Thomas Parkinson, Christina Candale

Modelling Household Occupancy Profiles using Data Mining Clustering Techniques on Time Use Data ................................................................................................................................. 1725
Giuseppina Battista, Oliver Neu, Will Turner, Donald Finn

Simulating the Behavior of Building Occupants using Multi-agent Narratives: A Preliminary Study in a Generic Hospital Ward ................................................................................................................................. 1735
Davide Schaumann, Simon Breslau, Rhys Goldstein, Azam Khan, Yehuda E. Kalay

Application of Dynamic Numerical Simulation to Investigate the Effects of Occupant Behaviour Changes in Retrofitted Buildings ................................................................................................................................. 1745

Usefulness of the obFMU Module Examined through a Review of Occupant Modelling Functionality in Building Performance Simulation Programs ................................................................................................................................. 1753
Andrew Cowie, Tianzhen Hong, Xiaohang Feng, Quentin Darakdjian

Surrogate Models to Cope With Users’ Behaviour in School Building Energy Performance Calculation ................................................................................................................................. 1763
Fulvio Re Cecconi, Massimiliano Manfre, Lavinia Chiara Tagliaab, Giorgia Marenzi, Enrico De Angelis, Angelo Luigi Camillo

Introducing and Testing a Strategy for Fit-for-Purpose Occupant Behavior Modeling in a Simulation-Aided Building Design Process ................................................................................................................................. 1771
Isabella Gaetani, Pieter-Jan Hoes, Jan L.M. Hensen
Eric Fichter, Sebastian Weck, Ralf Becker, Jan Derksen, Stephan Düber, Jérôme Frisch, Robert löhring, David Koppmann, Jörg Blankenbach, Christoph van Treeck, Martin Ziegler

Interactive Building Design Space Exploration Using Regionalized Sensitivity Analysis .................................................. 1997
Torben Østergaard, Rasmus Lund Jensen, Steffen Enersten Maagaard

Analysis of Control Strategies for a Novel HVAC System Equipped with a Room-temperature Water Loop .......................... 2007
Alessandro Maccarini, Göran Hallmark, Alireza Afshari, Niels C. Bergeæ

Life Cycle Assessment of Buildings and City Quarters Analysing the Influence of Different Climatic Conditions ........... 2015
Ursula Ecker, Hannes Harter, Verena Weier

Exploring the Commercial Implications of Measurement and Verification Choices in Energy Performance .......................... 2022
Pamela J Fenell, Paul A Raysevel, Andrew ZP Smith

Gaussian-Process-Based Emulators for Building Performance Simulation ..................................................................... 2030
Parag Rastogi, Mohammad Emtyaz Khan, Marllyne Andersen

Development of South Korea’s National Integrated Building Energy Management System for Green Building .......... 2039
Younghoon Kwak, Sungsoo Shin, Sunggeyong Oh, Ohin Kwon, Dongyoung Lee

TRNSYS 18: The Continued Evolution of the Software ........................................................................................................... 2049
Timothy P McDowell, David E Bradley, Marion Hiller, Jochen Lam, Jakob Merk, Werner Keilholz

Simulation-time Reduction Techniques for a Retrofit Planning Tool .................................................................................. 2058
Georgios I. Giannakis, Georgios D. Kontes, Ivan Koralija, Dimitrios V. Rovas

Co-Simulation to Bring Advanced Physics to Building Thermal Performance Analysis .................................................. 2068
Walter Mazerowski, Nathan Mendes, Ricardo C. L. F. Oliveira

URBAN
Analysis of Heating Load Diversity and Application in a District Heating System ........................................................... 2077
Claudia Weismann, Patrick Wörner, Tianchen Hong

Generation and Evaluation of Alternative Urban Densification Scenarios .................................................................... 2087
Milena Vuckovic, Aradeshir Mahdavi, Christian Tauber, Kristina Kiesel, Stefan Glawischning, Alexandra Heiderer, Ida Pirstinger, Martina Majcen, Matthias Raudaschl

High-resolution Representations of Internal and External Boundary Conditions in Urban Energy Modelling ................ 2093
Aradeshir Mahdavi, Neda Ghaissi, Milena Vuckovic, Mahmameh Taheri, Farhang Tahmanebi

Re-diversification of Predictions of a Reductive Urban Energy Modeling Method .............................................................. 2103
Neda Ghaissi, Aradeshir Mahdavi

Development of a District Modeling Approach for Buildings using 3DEXPERIENCE and Dymola/Modelica Environments ...................................................................................................................... 2113
Valentin Gavan, Alain Mousky

A Study on the Multi-Objective Optimisation of District Energy System Performances .................................................... 2120
Nicolas Perez, Christian Inard, Peter Heiderer, Vincent Partenay

Inter-Building Shading Calculations Based on CityGML Geometric Data ...................................................................... 2130
G.N. Lito, G. Giannakis, D.V. Rovas

Predicting the Effect of Changes to the Urban Environment on Future Electrical Demand Using Building Simulation and Archetype Models .................................................................................................. 2140
Andrew Cowie, Nick Kelly, Raheel McGhee, Aizaz Samuel, Ciaran Higgins, Watson Peat

A Novel Occupant-Focused Framework to Test Community-Scale Building Energy Feedback .......................................... 2150
Elie Azar, Min Lin

Coupling a Reduced Order Building Energy Model to UrbanSim ...................................................................................... 2157
Ralph T. Muehlstein, Joshua Bergerson

Architectural-Geometrical Simplification for Multi-Zone Building Models for Urban Refurbishment Projects ................ 2164
Alexander Inderfurth, Arda Karasu, Christoph Nytsch-Geusen, Claus Steffan

GIS Data Extraction and Visualization to Support Urban Building Energy Modelling ...................................................... 2171
Daniel Sobieraj, Xavier Mendeta, J.J. McArthur

Implementation of a Calibrated Urban Building Energy Model (UBEM) for the Evaluation of Energy Efficiency ............ 2180
Carlos Cerezo Davila, Nathaniel Jones, Adil Al-Mumin, Ali Hajiah, Christoph Reinhart

Generating High Resolution Near-Future Weather Forecasts for Urban Scale Building Performance Modelling ........ 2190
Hu Du, Michael Barclay, Phil Jones

Comparison of Two Simulation Methods for the Technical Feasibility of a District Heating System Using Waste Heat from a Copper Plant with Thermal Storage .............................................................................. 2198
Lizy M., Ignacio Torrote, Jan E. M. Hensen

Wind, Sun, Surface Temperature, and Heat Island: Critical Variables for High-Resolution Outdoor Thermal Comfort .............................................................................................................. 2207
Christopher Mackey, Theodore Galanos, Leslie Norford, Mostapha Sadeghpoure Roudsari

Building Simulation 2017: “Determination of Heat Flux Coefficient Methods for City District Simulation” ................. 2216
C. Fliegen, A. Brünjen, J. Frisch, C. van Treeck

An Integrated Model for Urban Microclimate and Building Energy in High-Density Cities for Early Design ................. 2225
Jiannxiang Huang, Phil Jones, Rong Peng, Xiaojun Li, Shanshun Hou
Campus Energy Model: Using a Semi-Automated Workflow to Build Spatially Resolved Campus Building Energy Models for Climate Change and Net-Zero Scenario Evaluation

VOLUME 5

District Data Management, Modelling and Visualization via Interoperability

Matteo Del Giudice, Anna Osello, Arianna Fonsani, Daniela De Luca, Alberto Masetti, Francesca Marchi, Edoardo Patti, Francesco Brundu, Andrea Acquaviva

Developing an Open Python Library for Urban Design Optimisation – Pyliburo

Kian Wee Chen, Leslie Norford

Bayesian Calibration of Residential Building Clusters using a Single Geographic Building Representation

Martin Heine Kristensen, Ruchi Choudhary, Rasmus Hart Pedersen, Steffen Petersen

Model-based Assessment of Cost-effective Retrofit Solutions for a District Heating System Extension

Carine Tran, Luys Xu, J. Ignacio Torrens Galdez, Jan L. M. Hensen, Vincent Lemort

Impact of Electricity Price Policies on Optimal District Energy System Design

Khadija Benis, Christoph Reinhart, Paulo Ferrão

Complex Large-Scale Heating, Cooling and Power Supply Models – Virtual Renewable Power Plant Simulation with Modelica

Torsten Schwan, Rene Unger

Automated Design and Model Generation for a District Heating Network from OpenStreetMap Data

Marcus Fuchs, Dirk Müller

Transpirative Cooling Potential of Vegetation in Urban Environment using Coupled CFD and Leaf Energy Balance Model

Dimitry Burdjalov, S. Michael Daukoru, Anthony Duer

Assessing Aggregated Impacts of Distributed Energy Resources (DERs): A Building Stock Model Approach

Dominique Derome, Lento Manickathan, Thijs Debruyne, Jan Carmeliet

Combined GIS, CFD and Neural Network Multi-Zone Model for Urban Planning and Building Simulation

Meng Kong, Mingyi Yu, Ning Liu, Peng Gao, Yanzhi Wang, Juanshun Zhang

Modelling, Simulation and Control of Smart and Connected Communities

Zhaoxuan Li, Ankur Pripri, Bing Dong, Nikolaos Gatsis, Ahmad F. Taher, Nampeng Yu

Simulation in Support of the Design Process for an Outdoor Space

Santosh Philip, Nathan Brown, George Loisos, Susan Ubbelohde

The Influence of Building Height Variability on Natural Ventilation and Neighbor Buildings in Dense Urban Areas

Jing Li, Michael Donn

A Framework for Outdoor Mean Radiant Temperature Simulation: Towards Spatially Resolved Thermal Comfort Mapping in Urban Spaces

Tarek Bakha, Pouya Zand, Christoph Reinhart

A ‘Big Data’ Approach to the Application of Building Performance Simulation to Improve the Operational Performance of Large Estates

Joe Clarke, Daniel Costola, Andrew Cowie, Jon Hand, Nick Kelly, Filippo Monari

Urban Energy System Simulation using the Functional Mock-Up Interface

Markus Schumacher, Marcus Fuchs, Dirk Müller

A Data-Driven and Simulation Approach for Understanding Thermal Performance of Slum Redevelopment in Mumbai, India

Ramit Deb Nath, Ronita Bardhan, Rishree K. Jain

Building Simulation With Local Environmental Conditions: Defects Integration in a Thermal Building Model

Auline Rodler, Sihem Guernouti, Marjorie Musy, Julien Bouyer
VALIDATION

Comparison Between the Results of Computational Fluid Dynamics Analysis and an Experiment Using Particle Image Velocimetry

Development of Test Procedure for the Evaluation of Building Energy Simulation Tools

A Residential Case Study to Validate a New Default Detection Method Based on Discrepancies Between Simulated and Measured Data

Airsite HVAC BESTEST: HVAC Air-Distribution System Model Test Cases for ASHRAE Standard 140

Improving the Energy Performance Contracting Process using Building Performance Simulation: Lessons Learnt from a Post Occupancy Investigation of a Case Study in the UK

Impact of Weather and Occupancy on Energy Flexibility Potential of a Low-Energy Building

Verification of a Low Order Building Model for the Modelica Library AixLib using ASHRAE Standard 140

Side-by-Side Tests of a Net-Zero Energy Building

Modeling and Calibration of a Variable Refrigerant Flow (VRF) System with a Dedicated Outdoor Air System (DOAS)

Performance Evaluation and Improvement of a Newly-Renovated Danish School Building (Retro-commissioning)

A Framework for Empirical Validation of Building Performance Simulation under Uncertainty

Combined Sensitivity Ranking of Input Parameters and Model Forms of Building Energy Simulation

Evaluation and Modeling of Data Center Energy Efficiency Measures for an Existing Office Building

VISUALIZATION

BuildingSystems_VR – A New Approach for Immersive and Interactive Building Energy Simulation

Balancing Thermal and Luminous Autonomy in the Assessment of Building Performance

Visualization of Passive Performance Parameters Through Time-Based Metrics and Discussion of a Survey for Validation of the Approach

Visual Quality Assessment of Building Energy Performance Simulation Models

An Artistic Analysis to Guide Trustees Preserving an Artistic Vision for Building Simulation 2017 Conference

A Workflow for Managing Building Information and Performance Data using Virtual Reality: An Alternative to BIM for Existing Buildings?

Graphical Visualization of Potential Cost Savings from Energy Storage under Time-of-Use Electric Rates

An Experiment in Virtual Reality to Measure Daylight-Driven Interest in Rendered Architectural Scenes

WEATHER

Efficient Summertime Overheating Analysis Using Decomposed Weather Files

Effect of the Application between Anisotropic and Isotropic Diffuse Radiation Model on Building Diffuse Radiation Heat Gain

Application of a Performance Oriented Climatic Zoning for Buildings in Nicaragua

Influence of Solar Irradiance Models on the Selection of Optimal Refurbishment Measures

Climate Change and Its Impact on Building Energy Consumption in Office Building of Different Climate Zones in China
Recurrent Neural Network based Deep Learning for Solar Radiation Prediction
Fuxin Niu, Zheng O’Neill

Sky Temperature Estimation and Measurement for Longwave Radiation Calculation
Kun Zhang, Timothy P. McDowell, Michaël Kummert

A Simplified Vector-based Method for Irradiance Prediction at Urban Scale
Wei Liao, Yeonsook Heo

A Basic Evaluation of Non-Uniform Radiant Fields Using Computational Thermal Manikin
Ikumi Kishida, Koji Sakai, Hiroki Ono, Daiki Kobayashi

Façade Photometrics: Luminance Distribution Analysis Through Building Skins
Asad Omidfar Sawyer

Advanced Insolation Detection Module in Solar Shading Automation
Robert Weitlaner, David Geisler-Moroder, Rainer Pfluger

Ground Factors and Lighting Design in an Urban Area: Daylight Availability and Light Pollution Risk
Xin Zhang, Jiangtao Du, Steve Sharples

Simulation Study for Developing Anidolic Solar Shading for Warm-Humid Climates
Floriberta Binarti, Jackobus A. Prasetya

Combined Daylight and Thermal Calculation Tool for Annual Energy Performance Simulation of Rooms with
Advanced Daylight-Controlled Lighting Systems
Steffen Petersen

A New Method of Representing Highly-Conducting Window Frames in Building Simulation Models
Peter R. Lyons, D. Charlie Caccia

An Integrative Algorithmic Platform Coupled with Gradient Descent and Parametric Analysis Methods to
Optimize Skylight Sizes
Sara Matamaci, Petra Liedl

Improving Window Selection: A New Workflow and Tool for Architects/Engineers
Huishan He, Ruifei Wang, Holly W. Samuelson, Panagiotis Michalatos

Daylight Performance of Subdivided Windows with Automatic and Manual Shading Devices
Leyla Sanati

Co-optimization of Solar Tracking for Shading and Photovoltaic Energy Conversion
Forrest Meggers, Dorit Aviv, Victor Charpentier, Eric Teitelbaum, Adam Ainslie, Sigrid Adriaenssens

Glazing and Winter Comfort Part 2: An Advanced Tool for Complex Spatial and Temporal Conditions
M. Alejandra Menchaca-Brandan, Vera Baranova, Lynn Petermann, Stephanie Koltun, Christopher Mackey

Calculating the Effect of External Shading on the Solar Heat Gain Coefficient of Windows
Christian Kohler, Yash Shukla, Rajan Rawal

Simulation Study to Derive a Determination Strategy of Window Spacer to Mitigate Heat Loss and Condensation
Risk
Ali F. Alajmi, Hosny Abou-Zyian, Hamad H. Al-Mutairi

Selecting the Optimum Window Elements of Several WWRs without Prejudicing the Energy Consumption
Kyu-Nam Rhee, Mi-Su Shin, Jo-Yong Yu, Gun-Joo Jung

Author Index
