Materials Science & Technology Conference and Exhibition 2018 (MS&T'18)

Columbus, Ohio, USA
14 - 18 October 2018

Volume 1 of 2

TABLE OF CONTENTS
Materials Science and Technology 2018 (MS&T18)

Edited Manuscripts

Multiscale Modeling of Microstructure Deformation in Material Processing
Simulation of Dendrite Formation during Unstable Solidification Using a Second Order Level Set Method .............................. 1
Vimal Ramanuj and Ramanan Sankaran

A Crystal Plasticity Model for Dynamic Recrystallization in Ti-6Al-4V Alloy ................................................................. 4
Arunabha M. Roy and Veera Sundararaghavan

Concepts of Communication Interface in the Fe² Method ........................................................................................................ 10
Adam Legwand and Lukasz Madej

Unedited Manuscripts

Additive Manufacturing of Composites and Complex Materials III

Hybrid Additive Manufacturing of Gamma Titanium Aluminide Space Hardware ................................................................. 13
André Seidel, Elena Lopez, Shuvra Saha, Tim Maiwald, Juliane Moritz, Stefan Polenz, Axel Marquardt, Joerg Kaspar, Thomas Finaske, Mirko Riede, Frank Brueckner, and Christoph Leyens

Manufacturing of Functionally Graded Parts Using 3D Plasma Metal Deposition ................................................................. 22
Peter Mayr and Kevin Höfer

Additive Manufacturing (AM) of Novel Aluminum Metal Matrix Composites ................................................................. 26
Adam J. Polizzi and Jeremy J. Iten

Optimization of Printing Parameters for 3-D Printed PLA ................................................................................................. 41
Nishant Hemant Hawaldar, Piyush Pai Raikar, Tejesh Charles Dube, and Jing Zhang

In-Situ Fabrication of Electro-Mechanical Structures Using Multi-Material and Multi-Process Additive Manufacturing ...... 49
Tushar Saini, Kashish Dhal, and Panos S. Shiakolas

Additive Manufacturing of Metals: Microstructure and Material Properties

Validation of Methods for Mechanical and Microstructural Property Measurement of Sub-Standard Sized SLM Test Specimens ........................................................................................................ 56
Tanni Alam, Jonathan Raush, Congyuan Zen, and Shengmin Guo

Development of Nitinol Alloys for Additive Manufacturing ................................................................................................. 63
Kerri M. Horvay and Christopher T. Schade

The Influence of Processing Parameters on Strut Diameter and Internal Porosity in Ti6Al4V Cellular Structure ................ 71
H.Salem, L.N. Carter, M.M. Attallah, and H.G. Salem
Additive Manufacturing of Metals: Post Processing

Selective Laser Melting of Ti6Al4V with High Build Rates and Following Hot Isostatic Pressing .............................................. 117

Effect of Heat Treatment on Microstructure and Mechanical Properties of Laser Deposited Haynes 282 Superalloy .......... 125
Abhishek Ramakrishnan, Aniket Dighe, and Guru Dinda

T. Bauer, A.B. Spierings, and K. Wegener

Process Chain Optimization in the Case of SLM-Based Tool Making ................................................................................... 141
O. Elstermeyer and F-J. Villmer

Additive Manufacturing: In-situ Process Monitoring and Control

Characterizing Surface Defects in Additively Manufactured Components Using Smart-Phone Imaging ......................... 149
Mustafa Rifat, Amol Kulkarni, and Saurabh Basu

Identification of Control Parameters for Porosity Detection in Selective Laser Melting ................................................................. 157
Andrea Huxol, Filippo Simon, Eva Scheideler, and Franz-Josef Villmer

High-Speed X-Ray Imaging for Correlating Acoustic Signals with Quality Monitoring: A Machine Learning Approach ... 165
K. Wasmer

A Flash Thermography Technique for In Situ Inspection for the Laser Powder Bed Fusion Process ................................. 170
Bin Zhang, Letchuman Sriparagash, Zachary Reese, Angela Davies, and Christopher Evans

Additive Manufacturing: Modeling and Simulation of AM Materials, Processes, and Mechanics

Creep Modeling of 3D Printed Nickel Based Super Alloy ........................................................................................................ 178
Vighnesh Shetty and Jing Zhang

Design of 3D Printer Component for Extrusion of Stainless Steel-Based Slurry ........................................................................ 187
Harshal G. Dhamade and Jing Zhang
Temperature-Dependent Charpy Impact Property of 3D Printed 15-5 Stainless Steel ........................................................... 193
Yi Zhang, Sugrim Sagar, Hye-Young Park, Yeon-Gil Jung, and Jing Zhang

Phase Field Simulation of Dendritic Solidification of Ti-6Al-4V during Additive Manufacturing Process ................. 201
Linmin Wu, Lingbin Meng, and Jing Zhang

Analysis of Fatigue Behavior of 3D Printed 15-5 Stainless Steel - A Combined Modelling and Experimental Study .......... 211
Anudeep Padmanabhan and Jing Zhang

Modeling of Phase Transformation in the Production of Self-Propagating High-Temperature Synthesis of Wear-Resistant Coatings .................................................................................................................................................. 216
Borys Sereda, Dmytro Sereda, and Irina Palehova

Additive Manufacturing: Powder Characterization and Recycling

Use of 316L Stainless Steel Powder with Bimodal Size Distribution in Selective Laser Melting ................................. 222
Hannah G. Coe and Somayeh Pasebani

Advanced Coatings for Wear and Corrosion Protection

Effects of Rapid Solidification and Numerical Modelling of Laser Cladded Ti-Al-Cu Coatings on Ti-6Al-4V Alloy ....... 230
O.S. Fatoba, R. Gharehbaghi, S.A. Akinlabi, and E.T. Akinlabi

Numerical Modelling and Influence of Silicon Addition on the Surface Analyses of Laser Deposited Coatings on Ti-6Al-4V Alloy ................................................................................................................................................. 240
O.S. Fatoba, E.T. Akinlabi, R. Gharehbaghi, and S.A. Akinlabi

Characterizations of CrN-Based Hard Coating Materials with Addition of GaN .......................................................................................................................... 251
Yusei Mizuno, Tadachika Nakayama, Hisayuki Suematsu, and Tsuneo Suzuki

Inhibition of Engineering Material in Sulphuric Acid Solution Using Waste Product ......................................................... 254
O. Sanni, A.P.I. Popoola, and O.S.I Fayomi

Getting Heat-Resistant Protective Coating under SHS Conditions on Composite Materials ........................................ 262
Borys Sereda and Dmytro Sereda

Improving the Wear Resistance of Coatings and Surface Treatment of Steel 50 and U8A on SHS ................................... 266
Borys Sereda and Dmytro Sereda

Microstructure and Densification of Al-Cr-Si Alloy Target Prepared by Using Gas-Atomization and Spark Plasma Sintering ................................................................................................................................................. 271
Hyeon-Taek Son, Yong-Ho Kim, and Hyo-Sang Yoo

Advanced Manufacturing, Processing, Characterization, and Modeling of Functional Materials

Influence of Cu Addition and Laser Processing Parameters on the Geometrical Characteristics of Icosahedral Al-Cu-Fe Coatings on Ti-6Al-4V Alloy .......................................................................................................................... 276
E.T. Akinlabi, O.S. Fatoba, S.A. Akinlabi, and M.E. Hakkatha

Synthesis of High Sn Concentration GeSn by Recrystallization of Amorphous Phase ......................................................... 284
Masashi Higashiyama, Manabu Ishimaru, Masayuki Okugawa, and Ryusuke Nakamura

A Comparative Experimental Investigation of Electric Discharge Machining Process Variants .................................... 288
Krishnakant Dhakar and Akshay Dvivedi
Advanced Steel Metallurgy: Products and Processing

Tempering and Austempering Response of a Double Soaked Medium-Manganese Steel ............................................................. 313
   Alexandra Glover, John Speer, and Emmanuel De Moor

Microstructure Control and Correlation to Formability of Low Alloy Steel via Flash Processing .................................................. 321
   Benjamin Shassere, Sudarsanam Suresh Babu, Gary Cola, Thomas Muth, and Thomas Watkins

Development of the Plate Steels with Grain Refined Surface Layers ............................................................................................. 329
   Il-cheol Yi, Jae-Young Cho, and Sang-Ho Han

Effects of Micro-Alloying and Processing History on Fe-Mn-Al-C Steel ..................................................................................... 335
   Krista R. Limmer, Daniel M. Field, Bryan A. Cheeseman, and Ryan A. Howell

Low-Density Steels Scientific and Technological Macro-Indicators ......................................................................................... 341
   Malena Aissa Andrade, Bráulio Salumão de Oliveira, Douglas Henrique Milanez, Daniel Rodrigo Leiva, and Guilherme Zepon

Numerical Simulation of Fluid Flow during the Steel Refining Process in an Electric Arc Furnace ................................................. 348
   Yuchao Chen, Armin K. Silaen, and Chenn Q. Zhou

Formation and Evolution of Inclusions in GCr15 Bearing Steels .............................................................................................. 356
   Gong Cheng, Jiaheng Duan, Wenbo Wang, and Lifeng Zhang

Complex Precipitation of MnS and Oxides in Heavy Rail Steels ............................................................................................... 364
   Wen Yang, Xuewei Zhang, Yanping Chu, and Lifeng Zhang

Control of Non-Metallic Inclusions in High Quality Saw Wires .................................................................................................. 372
   Min Jiang, Xin-Hua Wang, Kun-Peng Wang, and Ying Wang

Application of Ultrasonic Non-Destructive Testing System and ANSYS Simulation to Assess Defects in Continuously
   Cast Steel Slabs ........................................................................................................................................................................... 378
   Zhanfang Wu, Hsiang-Ling Juan, and C. Isaac Garcia

The Influence of SEN and Upper Nozzle Design on Flow Character for Slab Quality ................................................................. 386
   Jianqing Yao, Cunlin Li, Zhenghong Tian, and Yanwen Yu

Improvement in Refractory Life of Smelting Reduction Furnace .............................................................................................. 393
   Koichi Takahashi, Daisuke Kondo, Sohei Takagaki, Keisuke Adachi, and Masanori Nishikori

The Effect of Cooling Condition on the δ-to-γ Transformation in Selected Ferritic Stainless Steels .............................................. 401
   Suk-Chun Moon, Jong-Chul Kim, Seong-Yon Kim, and Rian Dippenaar

Tempering Machine Design and Construction for PC Strand Production Process ................................................................. 409
   Yilmaz Yildirim and Mustafa Ozmen

Comparison of the Mechanical Properties of Different Quality Austenitic Stainless Steels after Wire Drawing ......................... 413
   Yilmaz Yildirim

</table>
Study on Manufacturing Technology of High Purity DD5 Alloy
Huaxia Zhang, Guohong Ma, Yu Meng, Xujie Wan, and Ang Yu

The Technology Research of Reducing Bubbles Defects in Ultra-Low Carbon IF Steel
Wang Kun, Luo Yanzhao, and Zhen Xingang

**Advances in Surface Engineering**

A Novel TiN Formation Method on the Ti-Added Ferritic Stainless Steel
JungHyun Kong and SangSeok Kim

Investigation on Multiple Parametric Optimization of Cold Sprayed Coatings Process
Tarun Goyal, R.S. Walia and T.S. Sidhu

The Methodological Principles of the Engineering of Tribocoupling Details Surface under Multicomponent Loading
V.V. Tsyganov and L.I. Ivschenko

**Advances in Zinc-coated Sheet Steel Processing and Properties**

Impact of Roughness Length Scale on Spectral Emissivity during Intercritical Annealing of Advanced High Strength Steels
Kaihsiang Lin, Simon Trivett, and Kyle J. Daun

Corrosion Resistance of Zinc Coatings Doped with Aluminum Obtained under Conditions of SHS
Borys Sereda and Dmytro Sereda

Investigation of the Microstructure and Mechanical Properties of Sheet Steel after Obtaining Zinc Coatings under SHS Conditions
Borys Sereda, Dmytro Sereda, and Irina Sereda

A Study on Formation of Island Shaped Surface Oxide in AHSS Steels
Wonhwi Lee

**Art and Cultural Heritage: Reverse Engineering**

Conservation of a Historical Coin from 1853 Rescued in the Fortin Villa 25 de Mayo-Mendoza
Patricia Silvana Carrizo

Archeometallurgy, Heritage and Preservation Study of Iron Bridge over Mendoza River
Patricia Silvana Carrizo

Analysis of Inorganic Pigments in Unknown Works by Painter Fernando Fader through X-Ray Fluorescence (XRF)
Patricia Silvana Carrizo, Julio Ortigala, Cristián Aguilera

**Boron, Boron Coatings, Boron Compounds and Boron Nanomaterials: Structure, Properties, Processing, and Applications**

Hydrogen Boride Sheets Derived from MgB₂ by Cation Exchange
Takahiro Kondo

Hardening of Steels with Boron Coatings Obtained under Self-Propagating High Temperature
Borys Sereda and Dmytro Sereda
Ceramic and Crystal Materials for Optics and Photonics

Updated Advances in Coherent Poly-Propagation of Diffracted White Light in Natural Silicates ........................................ 634

Michelle R. Stem

Characterization & Methods in Failure Analysis

Case Histories of Some Failures of Fittings, Valves, and Tanks in the Petroleum Industry ............................................ 636

Barry S. Hindin

Characterization of Copper Tubing and Pipe Ruptures .......................................................................................................... 643

G. Wayne Maltry

Failure Analysis of T91 Grade Reheater Tube of a Supercritical Power Plant ................................................................. 651

Ravi Kumara and Anand Varma

Composition-Processing-Microstructure-Property Relationships of Titanium Alloys

Heat Treatment of Alpha+Beta Titanium Alloys .................................................................................................................... 656

Alireza Fadavi Boostani, Shiraz Mujahid, Andrew L. Oppedal, Cory Krivanec, Wilburn R. Whittington,
Paul G. Allison, Jishnu. J. Bhattacharyya, Sean Agnew, and Haitham El Kadiiri

Effect of Rapid Heat Treatment on the Microstructure of Alpha + Beta Titanium Alloys ....................................................... 659

Shiraz Mujahid, Alireza Fadavi Boostani, Cory Krivanec, Andrew L. Oppedal, Wilburn R. Whittington,
Jishnu. J. Bhattacharyya, Sean Agnew, and Haitham El Kadiiri

Investigation of Different Severe Plastic Deformation Methods Effect on Ti13Nb13Zr ....................................................... 664

Aslı G. Bulutsuz, Kadir Ozaltin, Witold Chrominski, Mehmet Emin Yurci, and Małgorzata Lewandowska

Effect of Caliber Rolling Temperature on Room and Elevated Temperature Tensile Properties of Ti-6Al-4V Alloy ........... 670

S.M. Jagadeesh Babu, S.V.S. Narayana Murthy, N. Prabhu, and B.P. Kashyap

Continuous Severe Plastic Deformation Methods .............................................................................................................. 680

Aslı G. Bulutsuz and Mehmet Emin Yurci

Controlled Synthesis, Processing, and Applications of Structural and Functional Nanomaterials

Three-Dimensional Mapping of Topological Relicts of Symmetry Breaking in Functional Nanomaterials .................... 685

Dmitry Karpov and Edwin Fohtung

Self-Organized 3D Networks of Tetragonal CuFe₂O₄ ............................................................................................................. 692

Gagan Jodhani and Pelagia-Irene Gouma

Programming Nanoparticle Assembly for Silica-Based Ionogels ......................................................................................... 698

Ruel McKenzie, Sainath Jadhav, Marisa Tukpah, and Daria Lazarenko

Synthesis of Silicon Nanoparticles from Cassava Periderm by Reduction Method .......................................................... 701

Engineering Nano-Structure of Perovskite Ceramics ............................................................................................................ 710

Habibollah Aminirastabi, Dongliang Peng, Gouli Ji, and Hao Xue
Brazing WC-Co to Inconel 600 Using Carbon Nanotubes Reinforced Cu-Zn Filler Metal ....................................................... 816

Microstructure Characterization and Evaluation of Mechanical Properties for Friction Welded EN-24 Alloy Steel .......... 822
Vijay Gaikwad, Vijay Hiwarkar, Vinayak Pawar, and Rajkumar Singh

Effect of Multipass Welding on the Microstructural Evolution and Mechanical Properties of High Strength Low Alloy 100 Steel ................................................................................................................................................................................. 830
Jonah E. Duch and John N. DuPont

Effect of Steel Microstructure on the Bonding of Steel and Nickel by Ultrasonic Welding .................................................. 841
J-Y. Lin, S. Nambu, and T. Koseki

Development of a Hybrid Ultrasonic-Resistance Spot Welding System for Aluminum Sheet .............................................. 844
Lindsey Lindamood, David Workman, and Jerry Gould

Additive Manufacturing for the Fabrication of Pylon in Lower Limb Prosthesis ................................................................. 852
Fariborz Tavangarian and Camila Proano

Effects of Titanium on Active Bonding between Sn3.5Ag4Ti(Ce,Ga) Alloy Filler and GaAs Substrate ......................................... 860
Xiaoqiang Wang, Yue Zhi , Hongwei Luo, Zhigang Cai, and Lanxian Cheng

Comparative Analysis of the Mechanical Properties of Aluminum Alloys Welded Joints Obtained by Friction Stir Welding .................................................................................................................................................................................. 867
Fedor Yu. Isupov, Anton A. Naumov, Oleg V. Panchenko, Leonid A. Zhabrev, and Anatoliy A. Popovich

Finite Element Simulation of Temperature Field during FSW of Dissimilar Al-Cu Joint ...................................................... 875
Evgenii N. Rylkov, Anton A. Naumov, Fedor Yu. Isupov, and Oleg V. Panchenko

Light Metal Technology – Applications for the Transportation Industry

A Study of the Effect of Rotary Electromagnetic Stirring on the Solidification Microstructure of Aluminum Alloys .......... 882
M. Mahdi Aboutalebi, Mihaela Isac, and Roderick I.L. Guthrie

Numerical Simulation and Pilot Scale Horizontal Single Belt Casting Experiments Used in the Production of Thin Strips of AA6111 Alloy .................................................................................................................................................................... 890
Mianguang Xu; Mihaela Isac; and Roderick I.L. Guthrie

Computational Study and Microstructural Analysis of AA2024 Strips Processed via the Horizontal Single Belt Casting Technique ..................................................................................................................................................................... 897
Justin Lee, Mihaela Isac, and Roderick Guthrie

Advanced Titanium Alloys with Tailored Properties for Aerospace and Automotive Applications ......................................... 905
Carsten Siemers, Florian Brunke, and Martin Bäker

Effect of Alternate Drawing on the Ductility of Drawn Wires for Aluminum Wire Harness ......................................................... 916
Chihiro Takuma and Kazunari Yoshida

Mechanical Behaviors and Deformation Control of As-Quenched Al-Cu Alloy for Large Aerospace Structures ............... 924
Qingyao Yuan, Gang Wang, Ke Ren, Wenguang Wang, and Yiming Rong

Numerical Investigation of Significant Process Parameters in a Tempered Deep Drawing Process of Magnesium Sheet Metal ................................................................................................................................................................... 932
Stefan Walzer and Mathias Liewald

Porosity Management in High Pressure Aluminum Die Castings .......................................................................................... 937
Dan Alan Beabout

xii
Materials Property Understanding through Characterization

Influence of Cryogenic Treatment on the Electrical and Thermal Properties of Gray Cast Iron .................................................. 1049
Deepak Joshi, Susil Putatunda, and James Boileau

The Reverse Direction of Modeling of Material Properties .................................................................................................. 1060
Vladimir B. Ginzburg

Use of Waste Gypsum from Hydrometallurgical Plant for the Recovery of Nickel from a Nickel Slag by Sulfurization ... 1072
Nurse Chauke, Michel Kalenga Wa Kalenga, and Willie Nheta

Bainite Transformation Kinetics of a Cr-Mo Medium Carbon Alloyed Steel ................................................................. 1081
Jian Zhu, Xichen Sun, Gary Barber, Xue Han, and Hao Qin

Effect of Time on Formation of Phases in the Slag during Tin Production ........................................................... 1089
David Ilunga Mutombo, Michel Kalenga Wa Kalenga, and Willie Nheta

The Use of Nanoindentation for Low Carbon Steel Wire Characterization .......................................................... 1098

Investigation of Transformation Plasticity Peculiarities of Alloyned Tool Steel .......................................................... 1107
Rasa Kandrotaite Janutiene, Arunas Baltusnikas, and Darius Mazeika

Characterization of Spacecraft Materials Using Reflectance Spectroscopy .......................................................... 1115
Jacqueline A. Reyes, Heather Cowardin, and Darren Cone

Effect of Basicity and Ferro-Silicon Addition Matte Formation from Ge-Copper Bearing Slag ......................................... 1125
Junior Ngoie Kayembe, Michel Kalenga Wa Kalenga, and Didier Kasongo Nyembwe

Materials Science and Engineering of Earth Abundant Materials

Selection of Aluminum Alloy for Casting Defectless Thermoforming Molds Using Green Sand Foundry Technology-An Experimental Approach ................................................................. 1132
Abdullah Al Shafe, Sabila Kader Pinky, and Cynthia K. Waters

Microalloyed Steels

Effects of Alloying on Hot Deformation Behavior of Nb Microalloyed Steels .......................................................... 1140
Evgenii I. Poliak, Olga A. Girina, and Steven G. Jansto

Revisiting the Role of Nb Microalloying in Medium-High Carbon Steels .......................................................... 1148
F. Bastos, B. Pereda, B. López, J.M. Rodriguez-Ibabé, M. Rebellato, and P. Uranga

Effect of Al and B Alloying on Phase Transformation in Nb Microalloyed Q&P Steels ............................................... 1157
Girina O., Yakubovsky O., Panahi D., and Janss S.

Interphase Precipitation in a Low-Carbon, Titanium-Molybdenum-Vanadium Microalloyed Steel .................................. 1166
C.A. Felker, J.G. Speer, G. Liu, and E. De Moor

Canadian HSLA Steel Pipelines: History and Technology Developments .......................................................... 1174
Mohsen Mohammadijoo, Laurie Collins, Hani Henein, and Douglas G. Ivey

Development of Hot Rolled Ultra-High Strength Steel with Enhanced Mechanical Properties .................................. 1182
Tihe Zhou, David Overby, Peter Badgley, Chris Martin-Root, Xiang Wang, Shenglong Liang, and Hatem Zurob
Niobium-Containing Steel Metallurgy, Product Segments and Applications ................................................................. 1190
  Steven G. Jansto

A Case Study on Niobium Substituting Vanadium in Long Products ................................................................. 1199
  Rafael A. Mesquita, Yan Wang, Bryan Williams, John Heerema, Steve Jansto, and Bhaskar Yalamanchili

Grain Size Distribution on a Forged Ni-Cr-Mo Low-Alloy Steel ................................................................. 1208
  M.J. Quintana, M. Kenney, T.K. Ales, P.C. Collins, and R. Gonzalez

Quality Assessment and Suggestion of Standard Revision for High Strength Rebars in China ............................. 1216
  Yang Caifu, Chen Xuehui, and Wang Ruizhen

Recrystallized Controlled Forging: The Key to Strong, Tough Economical Microalloyed Steel Forgings with Relaxed
Forging Conditions and No Heat Treatment ................................................................. 1224
  Aaron E Stein and Anthony J. DeArdo

Effect of Aluminum and Vanadium Fine Grain Practice on the Machinability of 4140 Steel ...................................... 1232
  Mark Emmendorfer, Simon N. Lekakh, Laura N. Bartlett, and Ronald J. O’Malley

Effect of Nitrogen Content on the Microstructures and Mechanical Properties in Simulated CGHAZ of Normalized
Vanadium Microalloyed Steel ........................................................................................................ 1240
  Chai Feng, Shi Zhong-ran, and Yang Cai-fu

Study of Heat Treatment Process on Microstructure and Mechanical Properties of 10CrNiMoV Bulb Flat Steel .......... 1248
  Chen Xuehui, Yang Caifu, Chai Feng, Zhang Qian, Hou Yaqing, and Yang Li

Research and Development of Low Cost X65 and X70 Niobium Microalloyed Pipeline Steel .................................. 1256
  Xiao-Long Yang, Qiang Wang, Shao-Jiang Yin, Miao Zang, Zhi-Xiu Zheng, Wei-Jian Liu, and Yun-Ge Wang

A Combined Approach to Provide a Guaranteed Combination of Steel Quality Characteristics ................................ 1264
  Tkachenko I., Tkachenko K., and Miroshnichenko V.

Detection of Inclusions in Steel by Electrochemical Corrosion Methods ................................................................. 1271
  Xue-wei Zhang, Cai-fu Yang, Feng Chai, Xiao-bing Luo, and Li-feng Zhang

Development of Nitrogen-Oxygen Mixed Blowing Process in Converter for Increasing Nitrogen and Its Application in
High-Strength Steel Bar Production ................................................................................................. 1291
  Yunge Wang, Huaqiang Hao, and Menglong Li

**Multifunctional Ceramic- and Metal-matrix Composites: Processing, Microstructure, Properties and Performance**

Rolling Behaviour of Aluminum Alloy 2014-10Wt% SiCᵦ Metal Matrix Composites ......................................................... 1296
  Ajay Kumar P., Gajendra Dixit, Aruna Patel, and S. Das

Hybrid Aluminum Matrix Composites (HAMCs) Using Powder Metallurgy Method .................................................. 1304
  A.H.M.E. Rahman, Issam Abu-Mahfouz, and N.S. MD Imran Zakir

Microstructure and Mechanical Properties of Coconut Shell Reinforced Epoxy Composites .................................. 1312

A Revamped Classification of Composite Materials .................................................................................................. 1319
  M.I. Pech-Canul, S. Valdez, M.C. Acosta-Enríquez, H.M. Hdz-García, E.B. Acosta-Enríquez, and J.C. Flores-Garcia

Updating Definitions and Concepts in the Discipline of Composite Materials ........................................................ 1326
  M.I. Pech-Canul, S. Valdez, Luis González, Golam Newaz, Xiaoming Wang, and Carlos Leon-Patiño
Neutron and Synchrotron Techniques for Advanced Materials Characterization
Near-Surface Elemental Analysis of Solids by Neutron Depth Profiling ................................................................. 1334
Jamie L. Weaver and R. Gregory Downing

PSDK XIII: Phase Stability and Diffusion Kinetics
B₄C-TiC to TiB₂-C High Temperature Transformation: Boron Carbide Stability and Boron Transport Mechanisms ........ 1342
Oleksii Popov, Alexandra Klepko, Serhii Chornobuk, and Edward Lutsak

Rare Earth Metals and Critical Materials: Synthesis, Processing, Production, Recent Advances
Rare Earth Salts: A Breakthrough Separation Technology for Rare Earths ................................................................. 1350
Alastair Neill
The Use of Centrifuge Technology in the Removal of Crud and Fine Particles in Mineral Processing ......................... 1353
Derek Ettie

Responsive Functional Nanomaterials
Surface Interactions on Nanostructured Metal Oxides for Gas Sensing Applications .................................................. 1362
J. Walker, S. Akbar, and P. Morris
Investigation of the Mechanical Behavior of Ionic Diblock Copolymer via Molecular Dynamics Simulation .................... 1365
Mengze Ma and Yao Fu
Kinetic Studies of Indoor Volatile Organic Compounds Removal with Functional TiO₂-Based Coating ..................... 1373
Zhuoying Jiang and Xiong Yu

Selection of Materials for Application in Corrosive Environments
Erosion-Corrosion of 90° Carbonsteel Elbow in Potash Brine-Sand Slurries ............................................................... 1381
Raheem Elemuren, Richard Evitts, Ikechukwu Oguocha, Glyn Kennell, Akindele Odeshi, and Regan Gerspacher
The Role of Alloy Microstructure on the Cavitation Corrosion Behavior of Iron-Based, Nickel-Based and Cobalt-Based Alloys in Seawater .............................................................................................................. 1389
A.Al-Hashem and N. Tanoli
Diffusion of Cr in the Haynes 230 Alloy during Corrosion in MgCl₂-KCl Molten Salt ..................................................... 1397
Yuxiang Peng and Ramana G. Reddy
On the Influence of Thermo-Mechanical Process History on Stress Corrosion Cracking of Solution Annealed Type 304 Stainless Steel ......................................................................................................................... 1406
Osama M. Al Yousif
Selection of Materials for Use in Corrosive Environments Using SHS Technology for Automobile Parts ..................... 1414
Borys Sereda, Dmytro Sereda, and Irina Kryglyak
Obtaining Highly Effective Protective Coatings in SHS Operating in an Aggressive Environment ............................ 1419
Borys Sereda and Dmytro Sereda
The Characteristic Changes of Oxygen Free Copper Based Welding Material in High Temperature Environment Containing a Large Amount of Hydrogen

Doryun Lee, Gyootaek Lee, Kanghyouk Choi, and Changho Moon

Study of Inhibitive Performance of Eco-Friendly Material on Stainless Steel in Simulated Saline Environment

O. Sanni, A.P.I. Popoola, and O.S.I. Fayomi

Sintering and Related Powder Processing Science and Technologies

Microstructural Evolution of Al-Cu-Mg Sintered Alloys Processed by Semi-Solid Extrusion Process

M.J. Davidson, Asit Kumar Khanra, and Katti Bharath

Spark Plasma Sintering of Pure Cadmium

Somi Doja, Anil Prasad, and Lukas Bichler

Densification and Microstructure of Fe-Cr-Mo-B-C Alloy Fabricated by Spark Plasma Sintering

Ahmad A. Sorour, Adedayo S. Adeniyi, Mohamed A. Hussein, Choongnyun P. Kim, and Nasser M. Al-Aqeeli

Small-Scale Properties of Materials and Length-Scale Phenomena

The Effect of Thin Carbon and Chemomechanically Softened Layers on the Near Surface Mechanical Properties of Sapphire Tested by Nanoindentation

S. J. Bull and A. Yadav

Solid State Processing

Multi-Objective Optimization of Multi-Channel Spiral Twist Extrusion Process Using a Response Surface Approach and Finite Element Analysis

D.M. Fouad, A. Moataz, W.H. El-Garaihy, and H.G. Salem

Effect of Spark-Plasma Sintering Parameters on the Hardness and Porosity of High-Energy Ball Milled Al-20 at.% V Alloys

J. Esquivel, T. Larimian, T. Borkar, and R.K. Gupta

Surface Properties of Biomaterials

Evaluation for Immunity of Biomaterials Based on Raman Spectroscopy

Hideyuki Kanematsu, Yuta Sakagami, Dana M. Barry, Michiko Yoshitake, Akiko Ogawa, Nobumitsu Hirai, Takeshi Kogo, Daisuke Kuroda, and Yoshimitsu Mizunoe

Prospect of Hydroxyapatite Powder Produced from Waste Poultry Egg-Shells for Biomedical Applications

Alafara A. Baba, Adeola A. Womiloju, Fatimah A. Abubakar, Abdullah S. Ibrahim, Anoka A. Njan, Folahan A. Adekola, and Abdul G.F. Alabi

Additive Manufacturing of Heterogeneous Bio-Resorbable Constructs for Soft Tissue Applications

Parimal T. Patel, Prashanth Ravi, Panos S. Shiakolas, Tré R. Welch, and Tushar Saini

Surface Protection and Spray Technology for Enhanced Materials Performance: Science, Technology, and Application

Understanding of Droplets Dynamics and Deposition Area in Electrospraying by Experimental and Modeling Approaches

Zhuoying Jiang and Xiong Yu
Synthesis, Characterization, Modeling, Properties and Applications of Functional Porous Materials

Characterization of Coal Fly Ash for the Production of Coagulant for Usage in Wastewater Treatment ............................................. 1512
  M. Clotilde Apua and Geoffrey S. Simate

Study on Anti-Impact Performance of Closed Aluminum Foam Sandwich Panels ........................................................................... 1522
  Qian Guo, Wenjin Yao, Wenbing Li, Jun Tang, and Xiaoming Wang

Thermal Protection Materials and Systems

Sensible Heat Capacity of Phenolic Resin ................................................................................................................................. 1530
  Sacha Wason, Tom Ashbee, Stephen Till, David Payne, Brendan Howlin, and Jimmy Stewart

Heat of Pyrolysis of Phenolic Resin ........................................................................................................................................ 1533
  Sacha Wason, Matthew Parry, and David Payne

Ultra High Performance Metallic Systems for Aerospace, Defense, and Automotive Applications

Quality Assurance of the GTE Cast Blades Protective Coating ................................................................................................. 1536
  Pavel Zhemanyuk, Vladimir Klochikhin, Valeriy Shilo, Aleksey Pedash, and Valeriy Naumyk

Formation of Identical Fine Grained Microstructures with High Impact Resistance in as Cast and as Hot Rolled Conventional Low Alloy Structural Steels ........................................................................................................................... 1542
  I.Tkachenko, K. Tkachenko, and V. Miroshnichenko

User-Related Failures

Analysis on Effect of Expensive Soil Using Polymeric Stabilizing Agents ....................................................................................... 1549
  Xijin Zhang, Xiong Yu, Yuan Guo, and Xudong Fan
