### OPTICAL METROLOGY

| 10585 07 | Study of μDBO overlay target size reduction for application broadening | [10585-6]     |

### INSPECTION

| 10585 08 | Defect inspection using a time-domain mode decomposition technique | [10585-7]     |
| 10585 0B | Contact inspection of Si nanowire with SEM voltage contrast       | [10585-10]    |
| 10585 0C | Through-focus scanning optical microscopy (TSOM) with adaptive optics | [10585-11]    |

### LWR

| 10585 0D | The need for LWR metrology standardization: the imec roughness protocol (Invited Paper) | [10585-12] |
| 10585 0E | Line-width roughness of advanced semiconductor features by using FIB and Planar-TEM as reference metrology | [10585-13] |
| 10585 0F | Programmed LWR metrology by multi-techniques approach              | [10585-14]    |
| 10585 0H | Measurement of pattern roughness and local size variation using CD-SEM: current status | [10585-16]    |

### CHALLENGES AND NEW METHODS

| 10585 0I | 7/5nm logic manufacturing capabilities and requirements of metrology (Invited Paper) | [10585-17] |

### NEW METHODS: STUDENT SESSION

| 10585 0M | Complex EUV imaging reflectometry: spatially resolved 3D composition determination and dopant profiling with a tabletop 13nm source | [10585-21] |
| 10585 0N | Characterization and imaging of nanostructured materials using tabletop extreme ultraviolet light sources (Best Student Paper) | [10585-22] |
| 10585 0O | Image-based overlay measurement using subsurface ultrasonic resonance force microscopy | [10585-23] |
EUV-angle resolved scatter (EUV-ARS): a new tool for the characterization of nanometre structures [10585-24]

X-ray EM simulation tool for ptychography dataset construction [10585-25]

OVERLAY NEWS

Image-based overlay and alignment metrology through optically opaque media with sub-surface probe microscopy [10585-26]

Holistic metrology qualification extension and its application to characterize overlay targets with asymmetric effects [10585-28]

Overlay and stitching metrology for massively parallel electron-beam lithography [10585-29]

Unique method for controlling device level overlay with high NA optical overlay technique using YieldStar in a DRAM HVM environment [10585-30]

HYBRID METROLOGY AND MACHINE LEARNING

CD-SEM real time bias correction using reference metrology based modeling [10585-31]

Implementation of machine learning for high volume manufacturing metrology challenges [10585-32]

NEW METHODS AND MACHINE LEARNING

Critical-dimension grazing incidence small angle x-ray scattering [10585-37]

Context-based virtual metrology [10585-39]

SEM

Modeling of electron-specimen interaction in scanning electron microscope for e-beam metrology and inspection: challenges and perspectives (Invited Paper) [10585-42]

Model improvements to simulate charging in SEM [10585-43]

Advanced CD-SEM solution for edge placement error characterization of BEOL pitch 32nm metal layers [10585-44]

Influence of e-beam aperture angle on CD-SEM measurements for high aspect ratio structure [10585-45]

OVERLAY

Yield impact for wafer shape misregistration-based binning for overlay APC diagnostic enhancement [10585-46]
Approaches of multilayer overlay process control for 28nm FD-SOI derivative applications [10585-47]

In-cell overlay metrology by using optical metrology tool [10585-48]

Matching between simulations and measurements as a key driver for reliable overlay target design [10585-49]

Multi-wavelength approach towards on-product overlay accuracy and robustness [10585-50]

In-cell overlay metrology by using optical metrology tool

Matching between simulations and measurements as a key driver for reliable overlay target design

Multi-wavelength approach towards on-product overlay accuracy and robustness

Advanced combined overlay and CD uniformity measurement mark for double patterning [10585-52]

Enabling optical metrology on small 5×5μm² in-cell targets to support flexible sampling and higher order overlay control for advanced logic devices [10585-53]

Spectroscopic vector analysis for fast pattern quality monitoring [10585-68]

Setting up a proper power spectral density (PSD) and autocorrelation analysis for material and process characterization [10585-54]

Holistic approach for overlay and edge placement error to meet the 5nm technology node requirements [10585-55]

A novel patterning control strategy based on real-time fingerprint recognition and adaptive wafer level scanner optimization [10585-57]

Scanner focus metrology and control system for advanced 10nm logic node [10585-58]

Computational metrology: enabling full-lot high-density fingerprint information without adding wafer metrology budget, and driving improved monitoring and process control [10585-59]

Correlation study of actual temperature profile and in-line metrology measurements for within-wafer uniformity improvement and wafer edge yield enhancement [10585-60]

Higher order intra-field alignment for intra-wafer lens and reticle heating control [10585-61]

Outlier detection in contamination control [10585-63]

Understanding overlay signatures using machine learning on non-lithography context information [10585-64]
POSTER SESSION

10585 1V  LMS IPRO: enabling local registration measurements for efficient e-beam writer correction [10585-65]
10585 1W  Allowable SEM noise for unbiased LER measurement [10585-114]

10585 20  Study on the dark-field illumination for near-field microscope using anamorphic optics to inspect defects on semiconductor wafers [10585-69]
10585 21  Advanced technique for ultra-thin residue inspection with sub-10nm thickness using high-energy back-scattered electrons [10585-70]
10585 22  Advanced CD-SEM imaging methodology for EPE measurements [10585-71]
10585 24  Unbiased roughness measurements: the key to better etch performance [10585-73]
10585 25  Assessment of variability and defectivity by high-throughput e-beam metrology for prediction of patterning defect probabilities [10585-74]
10585 26  How to measure a-few-nanometer-small LER occurring in EUV lithography processed feature [10585-75]
10585 27  Improved control of multi-layer overlay in advanced 8nm logic nodes [10585-76]
10585 29  Monte Carlo simulation of edge placement error [10585-79]
10585 2A  Clean focus, dose and CD metrology for CD uniformity improvement [10585-80]
10585 2B  Overlay of multiframe SEM images including nonlinear field distortions [10585-82]
10585 2C  Geometry-based across wafer process control in a dual damascene scenario [10585-83]
10585 2D  Advanced defect classification by smart sampling, based on sub-wavelength anisotropic scatterometry [10585-84]
10585 2E  Developing a flexible model of electron scattering in solid for charging analysis [10585-85]
10585 2I  Design optimization of highly asymmetrical layouts by 2D contour metrology [10585-90]
10585 2J  I-line stepper based overlay evaluation method for wafer bonding applications [10585-91]
10585 2L  Backscattered electron simulations to evaluate sensitivity against electron dosage of buried semiconductor features [10585-116]
10585 2O  Prototype through-pellicle coherent imaging using a 30nm tabletop EUV source [10585-117]
10585 2Q  Massive metrology using fast e-beam technology improves OPC model accuracy by >2x at faster turnaround time [10585-94]
Cognitive learning: a machine learning approach for automatic process characterization from design [10585-95]

A new way of measuring wiggling pattern in SADP for 3D NAND technology [10585-96]

In-depth analysis and characterization of a dual damascene process with respect to different CD [10585-97]

Automated AFM for small-scale and large-scale surface profiling in CMP applications [10585-98]

Quantitative approach for optimizing e-beam condition of photoresist inspection and measurement [10585-100]

Toward reliable and repeatable automated STEM-EDS metrology with high throughput [10585-101]

Tracking the defects of ultra-thin HfO2 using a Cody-Lorentz multiple oscillator model [10585-102]

Feed-forward alignment correction for advanced overlay process control using a standalone alignment station "Litho Booster" [10585-103]

Automated mask and wafer defect classification using a novel method for generalized CD variation measurements [10585-107]

Accuracy optimization with wavelength tunability in overlay imaging technology [10585-109]

Shot-noise limited throughput of soft x-ray ptychography for nanometrology applications [10585-110]

Multifractal analysis of line-edge roughness [10585-113]

Cutting edge multiple beam technology for EUV era: latest development progress and application [10585-119]
