HWRS 2018

2018 Hydrology and Water Resources Symposium (HWRS 2018): Water and Communities

3-6 December 2018, Melbourne

Author: Engineers Australia (National Committee on Water Engineering)

@Engineers Australia

Paper are peer-reviewed

Index

Selection of appropriate water-sensitive systems for stormwater quantity control in South Australia, pp.1-15

The Greater Bunbury Groundwater and Surface Water Interactions Model: recalibration and validation to use it as a decision support tool for water management, south-west Western Australia, pp.16-31

Applicability of Kriging to Regional Flood Estimation Problem in Victoria, pp.32-39

Application of WaterGuide –a framework for improved water resource management in Jordan, pp.40-49

TUFLOW Classic and HPC Comparison Using a Coupled 1D/2D Model of Toowoomba, pp.50-59

Apportioning Allocations to Users of Multi-Storage Water Supply Systems: A case study of making a complex volume shared system more transparent, pp.60-71

Securing low flows –a trial project to install low flow devices on existing farm dams, pp.72-93

Time saving automation For ARR2016, pp.94-111

Monitoring Irrigation Volumes using Climate Data and Remote Sensing Observations, pp.112-123

Supplementing Flood Frequency Analysis with Pre-record Paleofloods, pp.124-132

Modelling microbial source pathways at the catchment scale, pp.133-148

A proposed method and case study for detection of change in waterway health due to flow, pp.149-157

Improved information for future decision making, pp.158-169

Bottom up systems analysis of urban water resources and market mechanisms for pricing water and sewage services, pp.170-182

Flood studies for remote Indigenous communities in the Kimberley region of Western Australia, pp.183-194

A New Approach to Integrated Water Management in Victoria, Australia -Achieving Greater Results Through Collaboration and Partnerships, pp.195-201

Evidence of Climate Change in South-East Australian Water Data, pp.202-213

Large Basins or Small Dams? Reducing Flood Risk to Communities Through Design and Construction, pp.214-229

The application of space-time patterns to the verification of a large catchment in northern Victoria, pp.230-240

Challenges and opportunities in developing and implementing the Melbourne Water System Strategy, pp.241-251

Efficient Flood Estimation using ARR 2016 Temporal Patterns in South East Queensland, pp.252-266

Testing the robustness of optimal operating plans under various future hydro-climatic scenarios, pp.267-283

Integrated modelling of spatio-temporal variability in stream water quality across Victorian catchments, pp.284-297

From hydrodynamic modelling to operational decision making: managing bar openings at Toby Inlet to improve water quality, pp.298-313

Evaluating the effect of farm management on nutrient inflows to receiving water bodies in WA using paddock and catchment models, pp.314-328

Which way did the water go? Floodplain decisions for environmental benefits, pp.329-339

Flood Frequency Analysis for the Brisbane River Catchment, pp.340-350

Assessing the Impact of Climate and Catchment Changes in Wimmera Wetlands, pp.351-361

A computer tool for designing Onsite Detention (OSD) based on new Australian Rainfall and Runoff, pp.362-371

Flood Risk Assessment of Temporary Works for Infrastructure Projects, pp.372-379

Trends in farm dam development over time in Victoria, 2000-2015, pp.380-392

Evaluation of multi-model rainfall forecasts for the national 7-day ensemble streamflow forecasting service, pp.393-406

An Investigation into the Efficacy of Australian Rainfall & Runoff 2016 Procedures in the Mount Lofty Ranges, South Australia, pp.407-428

The Frederick Street catchment in Adelaide –a review of the 1960s rational method design and change in drainage standard due to infill development, pp.429-441

Performance of urban On-Site Detention systems using ARR2016 design rainfall inputs, pp.442-455

Visualising Hydrologic Data, pp.456-470

Effect of Climate Change on Performance WSUD Treatment Devices, pp.471-484

Characterising the location and rarity of annual maxima rainfall in the GTSM-R coastal zone, pp.485-496

Effects of Heightened Price Awareness on Urban Water Consumption, pp.497-504

Climate change impact assessment for Water NSW infrastructure strategy, pp.505-509

ARR has changed. What about my Cost-Benefit Analysis? Pp.510-520

Forecast Based Operations I -A Comparison with the Rain-on-Ground Operational Rationale, pp.521-535

Identifying the Existence of any Periodicity in Flooding, pp.536-546

Victorian Water Register –Next Generation, pp.547-557

Future perspective of rainwater harvesting: A case study for Sydney, pp.558-566

Victorian Monitoring Partnerships: A collaborative approach to water data acquisition and management, pp.567-568

Investigation of the Use of Australian Water Availability Project Rainfall Data for the Development of eWater Source Models for Water Planning in NSW, pp.569-585

Making it Rain with Shiny, pp.586-599

Another step on the difficult journey to regionalise a probability-based loss model, pp.600-613

Comparison of Annual Maximum and Peaks-over-Threshold methods in Flood Frequency Analysis, pp.614-625

A changing flow regime in southern Victoria, pp.626-634

Making every drop count in regional WA –bitumen water supply catchments, pp.635-644

Assessing climate change impacts on rural flooding in Victoria, pp.645-648

Determination of Pre-burst Rainfalls for Australian Rainfall and Runoff, pp.649-660

Flood Impact Assessment for Major Infrastructure Projects, pp.661-669

Proposing a Relationship Between Number of Pipe Bursts and Pipe Pressures in Water Distribution Systems, pp.670-680

Event-based versus duration-based assessment for long-term modelling of mining impacts, pp.681-695

Understanding limitations to implementing Water Sensitive Urban Design (WSUD) systems in existing urbanised catchments, pp.696-710

Understanding Deep Aquifer Responses to Interseam Materials of Brown Coal Mines, pp.711-722

CALIBRATION OF SACRAMENTO MODEL FOR A CATCHMENT WITH UNKNOWN ABSTRACTION, pp.723-734

Ensemble assessment and gridded surface response, pp.735-748

Benchmarking the selection of probability neutral hydrologic design floods for use in 2D hydraulic models, pp.749-761

Groundwater Condition Report for Decision Making, pp.762-776

Calibration of a Catchment-Scale Water Quality Model using PEST, pp.777-788

Investigations on Irrigation Diversions using eWater Source Models and Satellite Imagery in Regulated Richmond River, pp.789-802

Construction of a Rainfall-Runoff Model in Liberia, Africa, pp.803-813

Assessing long term climate change impacts on environmental flow compliance and shortfalls in the Yarra River, pp.814-826

Changes in Annual Rainfall-Runoff Responses in Melbourne's Major Water Supply Catchments, pp.827-840

Methodology for Determining Floodway / Flow Conveyance Extent in Australian Floodplains, pp.841-856

Developing an Urban Regional Flood Frequency Estimation Procedure for Australia, pp.857-872

Agile modelling: current practice, fad or future? Pp.873-883

The potential for tree ring hydrologic reconstructions in Australia –what does the future hold? Pp.884-900

A quick method for estimating the Probable Maximum Flood in the Coastal GTSMR Zone, pp.901-914

The value of water in storage: implications for operational policies, pp.915-929

MAKING IT REAL -THE DELIVERY OF REALTIME WATER DATA IN VICTORIA, pp.930-932

The Australian Water Resource Assessment Landscape model –AWRA-L: improved performance and regional calibration, pp.933-949

Towards sub-catchment scale soil moisture prediction: a combined remote sensing and land surface modelling approach, pp.950-962

Choosing the right defence – a tool for selecting the appropriate urban flood defence, pp.963-972

Benchmarking Hydrological and Hydraulic Models in a Gauged Urban Catchment in the ACT, pp.973-988
