# Contents

**Frontmatter**

Message from the Chairs ......................................................... iii

**Clone Detection and Application**

Code-to-Code Search Based on Deep Neural Network and Code Mutation  
Yuji Fujiwara, Norihiro Yoshida, Eunjong Choi, and Katsuro Inoue — Osaka University, Japan; Nagoya University, Japan; NAIST, Japan ................................................................. 1

A Novel Approach for Detecting Type-IV Clones in Test Code  
Brent van Bladel and Serge Demeyer — University of Antwerp, Belgium ................................................................. 8

Mining Source Code Improvement Patterns from Similar Code Review Works  
Yuki Ueda, Takashi Ishio, Akinori Ihara, and Kenichi Matsumoto — NAIST, Japan; Wakayama University, Japan .................... 13

**Clone Analysis**

An Empirical Study on Clone Evolution by Analyzing Clone Lifetime  
Md. Jubair Ibna Mostafa — University of Dhaka, Bangladesh ................................................................. 20

Tracking Method-Level Clones and a Case Study  
Kyohei Uemura, Akira Mori, Eunjong Choi, and Hajimu Iida — NAIST, Japan; AIST, Japan ................................................................. 27

Towards Classification of Loop Idioms Automatically Extracted from Legacy Systems  
Joji Okada, Takashi Ishio, Yuji Sakata, and Katsuro Inoue — NTT, Japan; NAIST, Japan; Osaka University, Japan ................................................................. 34

**Author Index** ............................................................................ 36
