TABLE OF CONTENTS

VOLUME 1

Analysis of Rotorcraft Pilot-Induced Oscillations Triggered by Active Inceptor Failures .................................................. 1
Michael Jones, Miles Barnett

Automatic Inceptor Decoupling System in Electronically Coupled Active Sidesticks for Dual Pilot Helicopters .......................... 23
Rodolfo Sampaio

Linear Parameter-Varying Control of Variable Span-Sweep Morphing Aircraft ........................................................................ 36
Jihoon Lee, Seong-Hun Kim, Seungyon Jung, Hanna Lee, Youdan Kim

Dynamic Soaring at 600 mph .......................................................................................................................................................... 47
Goertfried P. Sachs, R. Gruter

Spatial Control of Spanwise Lift Distribution for Gust Alleviation .................................................................................. 60
Joaquim N. Dias, James E. Hubbard

Failure Detection and Control of Electric Propulsion Aircraft Engines .................................................................................. 79
Yudai Suzuki, William Dunham, Ilya Kolmanovsky, Anouck Girard

Incremental Backstepping Sliding Mode Fault-Tolerant Flight Control ........................................................................ 93
Saureel Wang, Erik-Jan van Kampen

Modeling of Asymmetric Elevator Failures in the F-16 Aircraft ................................................................................................. 116
Ibhay Gumasboga, Alhug Ilhar

Design of Fault Tolerant Control System for Engine Failure of Single-engined Aircraft ....................................................... 129
Yongjun Seo, Youdan Kim

Vision-integrated Navigation System for Aircraft Final Approach in Case of GNSS/SBAS or ILS Failures ............................. 143
Yoko Watanabe, Augustin Manecy, Antal Hiba, Sho Nagai, Shin Aoki

Suppression of Nonlinear Rotary Slosh Dynamics using the SLS Adaptive Augmenting Control System .......................... 164
Jing Pei, Andrew Puezt, Camilo Duarte, Luke J. Miller, Paul Rothhaar

Towards New Controller Design Oriented Models of Propellant Sloshing in Observation Spacecraft .......................... 177
Anthony Bourdelle, Laurent Burlon, Jean-Marc Biannic, Helene Evain, Sabine Moreno, Christelle Pittet, Alexis Dalmon,
Sebastien Tangoy, Tarek Ahmed-Ali

The Effect of Sloshing on the Controllability of a Conventional Aeroelastic Launch Vehicle .................................................. 190
Erwin Mooij, Dereh J. Gransden

The Road to the Karman Line: Development of Liquid-Fueled Propulsion and Flight-Control Systems for .......................... 211
Suborbital Launch Vehicles

Merging Optimization Method with Runway Allocation Optimizing maximizing Runway Capacity ........................................ 222
Daichi Toratani

Mirtiam Denniss, Anil V. Rao

Performance Optimization and Guidance of a Low-Altitude Skid-to-Turn Vehicle: Part II: Optimal Guidance and Control .................. 258
Mirtiam Denniss, Anil V. Rao

Cooperative Guidance Strategies for Aircraft Defense with Impact Angle Constraints ................................................... 276
Atul Saurav, Shashi R. Kumar, Arnab Maiti

Fast Three-Dimensional Path Planning with Obstacle Avoidance Constraints ........................................................................ 296
Huan Jiang, Xinya Liu

Optimal Landing Guidance for a Fixed-Wing UAV Based on Dynamic Window Approach ........................................ 314
Shotaro Ishioka, Kenji Uchiyama, Kai Masuda

Formal Evaluation of an Advanced Helo Display for Zero-Zero Shipboard Landings ......................................................... 325
Amanda K. Lampton, Justin R. Gray, David H. Klyde, Peter Thompson

A GNSS/IMU-Based 5-Hole Pitot Tube Calibration Algorithm .......................................................................................... 347
Kerry Sun, Christopher D. Regan, Demoz Gebre-Egziabher

GNSS/INS Integrity Monitoring Considering Nominal Bias for Civil Aircraft CAT-I Approach ........................................ 368
Weichen Pan, Xingyu Pan, Xin Zhang, Baoyu Liu

Parametric Real-Time Navigation En-Route .................................................................................................................. 379
Jason Kirk, Saeyone Balasekar, Salah Tarazi, Mohammed Hassan, Michelle Kirby, Dimitri N. Mavris

Kalman Filter-Based Reliable GNSS Positioning for Aircraft Navigation ........................................................................ 400
Susan A. Taylor, Gavin B. Rosenberg, Tom C. Horne, Francois D. Hugon

Test Methods Used to Quantify Flight Control Inceptor Selection for a Business Jet Aircraft ........................................ 427

Design and Flight Test of a Stability Augmentation System for a Flexible Aircraft .......................................................... 442
Guilherme C. Barbosa, Rafael M. Bertolin, Juliano A. Paulino, Flavio Silvestre, Antônio B. Guimarães Neto

From Automation to Autonomy – Envelope Protection Functions in a Manned Fighter Aircraft ........................................ 471
Michael Dinkelmann, Christian Pausier, Martin Hanel, Robert Stich

Evaluation of a Haptic Feedback System for Flight Envelope Protection ........................................................................ 484
Dirk Van Baalen, Joost Elberbroek, Marino M. Van Paassen, Max Mulder

Real-time Adaptive Prediction of Loss-of-Control Margins on a Fourth Order Aircraft .......................................................... 509
Melvin Rafi, James E. Steck, Animesh Chakravarthy
Optimization of Three-Dimensional Lunar Landing Trajectories and Accessible Area Computation .................................................. 1045
Yuri Ulyshen

Computationally Efficient Suboptimal Guidance for Aerocapture .................................................................................................................. 1056
Yuri Ulyshen

Decentralized Position and Attitude Control for Electromagnetic Formation Flight .............................................................................. 1071
Zahra Abbasi, Jesse Hoagg, Thomas M. Seigler

A Probabilistic Approach to Optimization of Drogue-to-Main Parachute Transition Altitude for Ballistic Airdrops .............................. 1082
Rachit Aggarwal, Mrinal Kumar

Minimum-time Attitude Maneuver and Robust Attitude Control of Small Satellite Mounted with Communication Antenna ............................................................................................................. 1097
Kota Mori, Masaki Takahashi

Output Feedback Sliding Mode Control of a Fixed-Wing UAV Under Rudder Loss ............................................................................. 1112
Ugur Gunes, Artun Sel, Cosku Kasnakoglu, Unver Kaynak

A Novel Airplane Roll Mechanism: Nonlinear Motion Planning Approach .................................................................................................. 1129
Ahmed M. Hassan, Haitham E. Taha

Implementation And Demonstration Of Coordinated Transport Of A Slung Load By A Team Of Rotorcraft ........................................... 1142
Engin Gung, Jack W. Langelaan

Multi-UAV Continuum Deformation Flight Optimization in Cluttered Urban Environments ........................................................................ 1161
Hossein Bastopouli, Ella M. Atkins

Partial Replanning for Decentralized Dynamic Task Allocation .................................................................................................................. 1174
Noam Buckman, Han-Lim Choi, Jonathan P. How

Navigation Aware Planning for Tandem UAV Missions in GNSS Challenging Environments ......................................................... 1185
Florina Causa, Marija Popovic, Gianmaria Gamba, Arjuna Flenner, Michele Grazzi, Juan Nieto, Roland Siegwart

Implementation of Physical Subspace Identification on a Realistic Helicopter ..................................................................................... 1205
Sevil Avcioglu, Ali Turker Kutay, Kemal Leblebioglu

Waypoint Based Online Trajectory Generation and Following Control for the ACT/FHS ................................................................. 1218
Philippe J. Petit, Johannes Wartmann, Benjamin Frugnieré, Steffen Greiter

Shortest Dubins Path to a Circle .............................................................................................................................................................. 1230
Satyanarayana G. Manum, David Casbeer, Alexander L. Von Moll, Zacharias Fuchs

Advancements for A* and RRT in 3D path planning of UAVs .................................................................................................................. 1242
Christian Zammit, Erik-Jan Van Kampen

Optimal Control for Improved UAV Communication .................................................................................................................................. 1259
Rebecca J. Garnett, Arjuna Flenner

Fusion of Multiple Terrain-Based Sensors for Descent-to-Landing Navigation ...................................................................................... 1273
John C. Helmuth, Kari C. Ward, Kyle J. Demars, Gunner S. Frisch

Terrain Relative Navigation With Anonymous Features ......................................................................................................................... 1293
James S. McCabe, Kyle J. Demars

A State-Triggered Line of Sight Constraint for 6-DoF Powered Descent Guidance Problems .............................................................. 1315
Tayyip Reynolds, Michael Szumik, Danylo Malyuta, Mehran Mesbahi, Behcet Acikmese, John M. Carson

Discretization Performance and Accuracy Analysis for the Rocket Powered Descent Guidance Problem .............................................. 1331
Danylo Malyuta, Taylor Reynolds, Michael Szumik, Mehran Mesbahi, Behcet Acikmese, John M. Carson

Successive Convexification for 6-DoF Powered Descent Guidance with Compound State-Triggered Constraints .............................. 1351
Michael Szumik, Taylor Reynolds, Behcet Acikmese, Mehran Mesbahi, John M. Carson

Adaptive Control Schemes for Multirotor Systems under Actuator Failures and Wind Disturbances ..................................................... 1367
Yu Sheng, Gang Tao, Peter Beling

Experimental Results with the Set-Theoretic Model Reference Adaptive Control Architecture on an Aerospace Testbed ......................... 1380
Ehsan Arabi, Tansel Yucelen

Sliding Mode based Path Planning and Control of Impaired Aircraft .. 1396
Meryem Deniz, Takashi Yamashita, Sivasubramanuja N. Balakrishnan, Tansel Yucelen

Nonlinear Multi-Time-Scale Attitude Control of a Rigid Spacecraft with Uncertain Inertias ................................................................. 1411
Dipanjan Saha, John Vlasek

Fast Finite-time Sliding Mode Magnetic Attitude Control of Satellites .................................................................................................... 1431
Dipak P. Giri

Minimum-Time Model Predictive Spacecraft Attitude Control for Waypoint Following and Exclusion Zone Avoidance .................................... 1452
Richard L. Sutherland, Ilya Kolmanovsky, Anouck Girard, Frederick Leve, Christopher D. Petersen

Adaptive Attitude Control of Spacecraft Orbiting Around Asteroids ...................................................................................................... 1467
Nicholas Maya, Keum W. Lee, Sahjendra N. Singh

Optimal Initial Gimbal Angles for Agile Slew Maneuvers with Control Moment Gyrosopes ........................................................................ 1488
Ramin Ghshhtizjani, Andrei Kornienko, Tobias Ziegler, Johannes Loehr, Walter Fichter

VOLUME 3

Oscillating Control Moment Gyroscope Experimental Results ...................................................................................................................... 1498
Burak Akbulut, Ozan Tekinalp, Ferhat Arberkli, Kivanc Azgin

Kalman Filter Aiding MDS for Projectile Localization .............................................................................................................................. 1515
Bethany L. Allik, Moshe Hamaoui, Michael Don, Cory Miller
Stabilization of Fixed Gain Controlled Nonminimum Phase Infinite Dimensional Systems with Actuator Dynamics by Augmentation with Direct Adaptive Control ......................................................... 2067
Mark J. Balas, Susan Frost

A New Model Reference Adaptive Control Law to Address Actuator Amplitude Saturation .......................................................... 2083
Benjamin C. Gruenwald, Selahattin B. Sarsilmaz, Tansel Yucelen, Jonathan A. Muse

Optimal Control Design with Adaptive Nominal Loop ......................................................................................................................... 2094
Kelley E. Hashemi, Ryan Greenough, Nhan T. Nguyen

Application of a Distributed Adaptive Control Approach to a Heterogeneous Multiagent Mechanical Platform ........................................ 2107
Emre Yildirim, Selahattin Barak Sarsilmaz, Tansel Yucelen

Impulsive Rendezvous Maneuvers in the Restricted Three-Body Problem .............................................................................................. 2121
Giovanni Franzini, Mario Innocenti, Massimo Casasco

Low-Thrust Real-Time Guidance Algorithm for Proximity Operations about an Asteroid ................................................................. 2142
Antonio Canale, Erwin Mooij, Maruthi R. Akella

Feasibility of Active Debris Removal Testing on the International Space Station using Free-flyers ................................................................... 2157
Vatos Lappas, Antonios Tsourdas, Thomas Peters, Hanspeter Schaub, Robin Biesbroek

Spacecraft Swarm Formation Control via Bifurcation Dynamics and Adaptive Sliding Mode Control with Tracking Differentiator .................................................................................. 2179
Wei Lin, Hailing Chen, Jinfeng Sun, Kang Li, Haiping Liu

Chained Predictions of Flight Delay Using Machine Learning ................................................................................................................... 2194
Jun Chen, Meng Li

Aircraft Thermal Endurance Optimization Part I: Using A Mixed Dual Tank Topology And Robust Temperature Regulation .......................................................... 2219
David Sigthorsson, Michael W. Oppenheimer, David B. Doman

Aircraft Thermal Endurance Optimization Part II: Using A Simple Dual Tank Topology And Robust Temperature Regulation .......................................................... 2246
David Sigthorsson, Michael W. Oppenheimer, David B. Doman

Stochastic Model Predictive Control for Airspeed Optimization Using Successive Convexification .......................................................... 2263
Nobuhiro Yokoyama, Yoshinori Matsuno

Deep Recurrent and Convolutional Networks for Robust Fault Tolerant Autonomous Landing Control System Design Under Severe Conditions ................................................................................................. 2281
Cagatay Sahin, Baturhan Ergol, Nazim Kemal Üre, Huseyin Barak Kürü

Comparison of Convex Optimization-Based Approaches to Solve Nonconvex Optimal Control Problems .................................................. 2299
Runqiu Yang, Xiaoju Liu

Multi-Phase Spacecraft Mission Optimization by Quadratically Constrained Quadratic Programming ........................................................ 2322
Chuangchuan Sun, Ran Dai, Ping Lu

Three-Dimensional Interplanetary Hybrid Trajectory Optimization of Solar Sails ...................................................................................... 2337
Sandhya Selvaraj, Praveen Shankar

Flying Qualities and Controllability of Hypersonic Spaceplanes .................................................................................................................. 2355

Cut-Off Insensitive Guidance Algorithm for Instantaneous Impact Point (IIP) change of Rocket ................................................................ 2374
Byeongun Jo, Jaemyung Ahn

Autonomous Docking for Exploration of Extraterrestrial Lakes ................................................................................................................. 2389
Brian R. Paige, John Naglak, Caleb Kase, Nina Mahmoudian

Free-flying Spacecraft-mounted Manipulators: A Tool for Simulating Dynamics and Control ................................................................. 2400
Andreas Antonello, Alfredo Valverde, Panagiotis Tsiotras

Local Trajectory Generation for Hopping Robots Exploring Celestial Bodies ...................................................................................... 2414
Saurabh Upadhyay, A. Pedro Aguilar

Safe Spacecraft Rendezvous Using Dual Quaternions on Time-Dependent Trajectories Generated by Model Predictive Control .......................................................... 2426
Ali T. Buyukkocak, Ozan Tekinalp

Autonomous Aerial Exploration for Topological Mapping of Mars Environments .................................................................................... 2441
Evan T. Kaufman, Taeyoung Lee

Multibody Approach to the Controlled Removal of Large Space Debris with Flexible Appendages ................................................................ 2454
Ginana Singhe, Erwin Mooij, Derek G. Grunzden

Control of Fuel Thermal Management Systems with Transport Delays ................................................................................................. 2477
Michael W. Oppenheimer, David Sigthorsson, David B. Doman

Flight Controller Design Using μ-synthesis for Quad Tilt-Wing UAV ....................................................................................................... 2503
Kai Masuda, Kenji Uchiyama

Design of a Pitch Axis Autopilot Control Law for an Executive Transport Aircraft .................................................................................. 2528
Lakmal Kaviratna, Gi-Yun Chung, Jong-Yeob Shin, Rajeev Chandramohan

Analysis of Stability Margins w.r.t Aircraft Dynamics and Augmenting Handling Qualities of an Aircraft with Direct Adaptive Controller ................................................................................................. 2543
Nirmi Prabhakar, Richard J. Prazenica, Mark J. Balas

Modeling and Incremental Nonlinear Dynamic Inversion Control for a Highly Redundant Flight System .......................................................... 2554
Jiannan Zhang, Jian Wang, Fabiao Zhang, Florian Holzapfel
