24th International Symposium on Atmospheric and Ocean Optics: Atmospheric Physics

Gennadii G. Matvienko
Oleg A. Romanovskii
Editors

2–5 July 2018
Tomsk, Russian Federation

Organized by
V.E. Zuev Institute of Atmospheric Optics (Russian Federation)
Institute of Solar-Terrestrial Physics (Russian Federation)

Sponsored by
Russian Foundation for Basic Research (Russian Federation)
Siberian Branch of Russian Academy of Sciences (Russian Federation)

Published by
SPIE
The papers in this volume were part of the technical conference cited on the cover and title page. Papers were selected and subject to review by the editors and conference program committee. Some conference presentations may not be available for publication. Additional papers and presentation recordings may be available online in the SPIE Digital Library at SPIEDigitalLibrary.org.

The papers reflect the work and thoughts of the authors and are published herein as submitted. The publisher is not responsible for the validity of the information or for any outcomes resulting from reliance thereon.

Please use the following format to cite material from these proceedings:

ISSN: 0277-786X
ISSN: 1996-756X (electronic)

Copying of material in this book for internal or personal use, or for the internal or personal use of specific clients, beyond the fair use provisions granted by the U.S. Copyright Law is authorized by SPIE subject to payment of copying fees. The Transactional Reporting Service base fee for this volume is $18.00 per article (or portion thereof), which should be paid directly to the Copyright Clearance Center (CCC), 222 Rosewood Drive, Danvers, MA 01923. Payment may also be made electronically through CCC Online at copyright.com. Other copying for republication, resale, advertising or promotion, or any form of systematic or multiple reproduction of any material in this book is prohibited except with permission in writing from the publisher. The CCC fee code is 0277-786X/18/$18.00.

Printed in the United States of America by Curran Associates, Inc., under license from SPIE.

Publication of record for individual papers is online in the SPIE Digital Library.

Paper Numbering: Proceedings of SPIE follow an e-First publication model. A unique citation identifier (CID) number is assigned to each article at the time of publication. Utilization of CIDs allows articles to be fully citable as soon as they are published online, and connects the same identifier to all online and print versions of the publication. SPIE uses a seven-digit CID article numbering system structured as follows:

• The first five digits correspond to the SPIE volume number.
• The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc. The CID Number appears on each page of the manuscript.

## Part One

**MOLECULAR SPECTROSCOPY AND ATMOSPHERIC RADIATIVE PROCESSES**

| 10833 02 | Simulation of the atmospheric transfer of solar radiation in the visible spectral region [10833-6] |
| 10833 03 | Time-resolved Fourier transform infrared spectroscopy and updated system of neutral oxygen (O I) levels [10833-55] |
| 10833 04 | Interaction potential of H$_2$O molecules and water layer adsorbed on surface of aerogel nanopores [10833-68] |
| 10833 05 | Chemical kinetics equations describing water complex formations [10833-110] |
| 10833 06 | On estimation of the local line contribution in IR spectra of H$_2$O and CO$_2$ [10833-124] |
| 10833 07 | Interpretation of the water vapour continuum absorption spectra in 0.94 and 1.13 micron bands taking into account the contribution from intermediate line wings [10833-131] |
| 10833 08 | Radiative effect of different aerosol types in clear sky conditions according to COSMO-Ru model [10833-147] |
| 10833 09 | The $^{12}$CH$_4$ absorption spectra at 296 K and 200 K in the range between 6000 and 9000 cm$^{-1}$ [10833-151] |
| 10833 0A | Systematization of published scientific graphics characterizing the water vapor continuum absorption: 1 publications of 1898–1980 [10833-156] |
| 10833 0B | Systematization of published research plots in spectroscopy of weakly bounded complexes of molecular oxygen and nitrogen [10833-157] |
| 10833 0C | CF$_4$ and (H$_2$O)$_n$ molecular complexes [10833-162] |
| 10833 0D | Critical evaluation of measured rotation-vibration line positions of $^{14}$O$^1$H in the $X^2\Pi$ state using Ritz method [10833-204] |
| 10833 0E | The determination of transmittance, reflectivity, and absorptivity of a cloudy atmosphere with reflection [10833-208] |
Influence of radiation interaction of clouds on fluxes of radiation in the atmosphere

Estimation of carbon dioxide broadening and self-broadening coefficients of SO\textsubscript{2} lines

The VoTe room temperature H\textsubscript{2}\textsuperscript{18}O line list up to 25000 cm\textsuperscript{-1}

Automated system for control of geodynamic processes

Photosynthetic activity of plankton and assessment of gross primary production from measurements of CO\textsubscript{2} concentration in surface and bottom water of the Lake Baikal coastal zone

Peak intensities of methane Raman bands as a function of pressure

Estimation of contribution of water vapor continuum absorption to radiative balance of the atmosphere in cloudy conditions

Virtual research environment supporting applied meteorology and climatology problem solving

Retrieving the \textsuperscript{13}CO\textsubscript{2}/\textsuperscript{12}CO\textsubscript{2} isotopic ratio from high resolution ground-based FTIR measurement in Tsukuba

Siberian smoke haze over Europe in July 2016

Software complex for information support of computationally difficult tasks

Knowledge base on the parameters of cryolithic zone located in-between rivers Ob' and Enisei

Retrievals of the atmospheric methane content with use of new spectroscopic absorption line parameters

The sources of radioactive contamination in the southeast of the Tomsk region

Raman intensities of nitrogen and oxygen under high pressure

The influence of the accuracy of spectral line parameters of SO\textsubscript{2} and NO\textsubscript{2} in applications of atmospheric remote monitoring

Collection of published plots on water vapor absorption cross sections

Long-range filaments producing upon ultrashort mid-IR laser pulses train filamentation in air: numerical simulations
10833 0X  Coherence of the pseudo-Bessel beams propagating in turbulent atmosphere [10833-1]

10833 0Y  Acoustic and electrical effects in the atmosphere surface layer due to some ionospheric sources [10833-24]

10833 0Z  New approach to assessment of energy of sources of infrasound disturbances in atmosphere [10833-27]

10833 10  Formation the texture features vector using the energy approach [10833-31]

10833 11  Optoelectronic bistatic communication in the UV wavelength range [10833-47]

10833 12  Comparative analysis of key parameters of “photonic nanojets” from axisymmetric nonspherical microparticles [10833-48]

10833 13  Variations of the echo signal of the pulsed coherent Doppler lidar in the turbulent atmosphere [10833-50]

10833 14  Backscatter amplification effect of the mean normalized signal power of coherent lidar in the turbulent atmosphere [10833-51]

10833 15  On the transformation of images of cloud field elements when observing them in the topecentric observer coordinate system [10833-54]

10833 16  Algorithm for reconstruction of the Earth surface reflectance from Modis satellite measurements in a turbid atmosphere [10833-58]

10833 17  Distributions of the mean intensity of the laser beam during passage of the shock waves formed nose fairing ogival-shaped body, in turbulent atmosphere [10833-66]

10833 18  Variations of the height optical turbulence profiles at the Baikal Astrophysical Observatory and the features of its deformations in latitudinal direction [10833-69]

10833 19  Observation of “subpargelium” over the ground source of light [10833-85]

10833 1A  Correction for thermal and turbulent distortions in a multichannel optical system [10833-96]

10833 1B  Statistical estimates of the transfer characteristics, limiting ranges, and information transfer rate by atmospheric optical non-line-of-sight communication channels [10833-100]

10833 1C  Fluctuations of the eikonal of an extraordinary wave reflected from the inhomogeneous ionospheric plasma [10833-103]

10833 1D  Estimation of regular refraction and simultaneous broadening of laser beam in the atmospheric boundary layer [10833-117]

10833 1E  Coherence radius of laser beam in the atmospheric boundary layer [10833-118]

10833 1F  Multipurpose television system of operational aid to navigation in coastal zone under low-visibility conditions [10833-128]

Analysis of the polarization characteristics of the Schumann resonances from the data of long-term measurements in Tomsk [10833-214]

Estimation of local thunderstorms at the level of extremely low-frequency electromagnetic background in Tomsk [10833-220]

Attenuation of microwave radiation at millimeter waves in supercooled water of atmospheric aerosols [10833-221]

On the Monte Carlo based algorithm for the estimation of bidirectional angular characteristics of polarized radiation [10833-222]

Monte-Carlo algorithms for defining the components of the aerosol scattering matrix [10833-223]

Cloud droplet size distribution reconstruction by the phase function [10833-228]

Modeling of particle density in plasma filament formed by femtosecond laser pulse in air [10833-234]

Effective algorithms of statistical simulation with additional branching for solving the problems of the theory of radiation transfer [10833-239]

The interannual variability of suspended matter concentration in the North-Western part of the Black Sea [10833-240]

The turbulence formation in the observatories of the South Siberia and the North Caucasus [10833-243]

Criteria for selection of laser wavelengths for remote analysis of gas media [10833-258]

Dispersion of surface plasmon-polaritons in active planar structures of metal nanocomposites [10833-261]

Influence of concentration and heating of gold, platinum, and silver nanoparticles on the thresholds of non-resonant generation in heterogeneous planar active media [10833-263]

Results of numerical testing of algorithms for centering of focal spots in a Shack-Hartmann wave front sensor [10833-277]

Reconstruction of the wave front and measurement of the speed of cross-wind transport of turbulent distortions of optical radiation by not fully defined Shack-Hartmann pattern [10833-279]

Measurement of wavefront by sensors of Hartmann type with multilens rasters [10833-281]

Measuring methods of arrival angles of the laser radiation in the system of adaptive optics [10833-282]

Testing of the algorithm for correction of satellite images of the Earth's surface in the visible and near IR ranges with allowance for polarization [10833-284]
Deflector for correction of tilts angles of wave front

Completely conservative numerical scheme for the nonlinear Schrödinger equation

Influence of the phase front of the fs-pulse on the characteristics of the multiple filamentation

The emission spectra in a femtosecond plasma of aerosols

Using the Shack-Hartmann sensor for imitation of thermal aberrations and controlling the operation of an adaptive system

The transport equation in a turbulent weakly nonlinear medium and the methods numerical solution

Adaptive stabilization and imaging system on the Baikal Large Solar Vacuum telescope

Chaos and order of the wave beams positional parameters at the output of long atmospheric path

Cohen class time-frequency mapping in the analysis of the non-stationary parameters of a wave gaussian beam at the atmospheric path output

Angular displacements of laser beams propagating through a flooded supersonic jet

"The first light" for the system of inputting the elements of AO into the optical path of LSVT

Estimation of the crosswind along surface paths from a video sequence of distant objects: comparison with contact measurements

Verification of the passive optical meter of crosswind and turbulence in atmospheric experiments

Distribution of field amplitude fluctuations at the larger than unit relative variance of intensity fluctuations

Optimization of the lidar parameters for atmospheric turbulence study

Lidar “BSE-4” for the atmospheric turbulence measurements

Software for phase functions fast computation and optical phenomena visualization in water-drop atmospheric clouds

Reduction of data processing error of heterogeneous system laser sensing

Correlation of the laser intensity fluctuations for two linked FSO communication systems
Random wandering of Airy axisymmetric laser beam propagating through the turbulent atmosphere [10833-392]

Digital holography in hydrobiological research [10833-396]

Evaluation of the possibility of using remote methods for the classification of water sources for specific electrical conductivity [10833-401]

OPTICAL INVESTIGATION OF ATMOSPHERE AND OCEAN

Properties of aerosol and cloud from Raman-mie lidar and Radar soundings (Invited Paper) [10833-387]

Influence of continents on spatial distribution of aerosol characteristics in the southern part of the World Ocean [10833-8]

Experimental prototype of mobile (airborne) lidar [10833-9]

The estimation of optical radiation influence on human pulse waves [10833-10]

Seasonal and interannual variations of aerosol characteristics in the Arctic settlement Barentsburg (Spitsbergen archipelago, 2011-2017) [10833-11]

Features of spatial distribution of aerosol characteristics over Arctic seas [10833-12]

Chemical composition, microphysical and optical properties of aerosol in the atmosphere of the arid territories of Mongolia [10833-15]

Average aerosol characteristics in three sectors of the Southern Ocean and the effect of Antarctic islands [10833-16]

Experimental study of fluorescence spectra of oil pollutions on the terrain surface excited at 355 nm [10833-17]

Lidar technique for the simultaneous determination of meteorological and optical parameters of the atmosphere using the vibrational-rotational and pure rotational Raman spectra [10833-18]

Raman lidar for measuring the temperature of the stratosphere [10833-19]

Part Two

Software for numerical simulation of multicomponent gas analysis of the atmosphere [10833-21]

Seasonal variation of the diurnal behavior of aureole scattering phase function at the aerosol monitoring station of LOA IAO SB RAS [10833-36]
10833 3H Evaluation of emissions of atmospheric trace gases from remote sensing and local observations at the St. Petersburg site: anthropogenic emissions and wildfires [10833-39]

10833 3I Vertical light attenuation in the northwestern shelf of the Black Sea in the spring period: direct measurements, modeling, and satellite data [10833-45]

10833 3J Seasonal variability and inter-annual anomalies of hydrooptical characteristics, chlorophyll “a” concentration, and temperature on the Black Sea surface in 2017 [10833-46]

10833 3K Lidar studies of the upper cloud boundary altitude [10833-49]

10833 3L Monitoring of aerosol inhomogeneities parameters in atmosphere at 355 nm [10833-57]

10833 3M A complex experiment of measuring the average power of lidar echoes in a turbulent atmosphere [10833-59]

10833 3N The ratio of submicrometer and coarse particles in the aerosol size distribution under smoke and background conditions [10833-60]

10833 3O Complex optical experiment with use of remote and local control of atmospheric parameters [10833-61]

10833 3P Thermally induced polarization distortions of contrast ratio for strobing the lidar signal by an electro-optical shutter [10833-62]

10833 3Q Laser reflection method applicability for vegetation monitoring at eye-safe sensing wavelengths [10833-63]

10833 3R Atmosphere halogen oxides concentration retrieving by differential optical spectroscopy in the UV region of the spectrum [10833-64]

10833 3S Influence of the optically active layer on the standard satellite product – diffuse light attenuation coefficient: simulation [10833-70]

10833 3T Multiyear research of atmospheric deposition: case study at the Listvyanka monitoring station (Southern Pribaikalye, Russia) [10833-73]

10833 3U Variations of temperature regime of the atmospheric boundary layer in regions with various orography [10833-74]

10833 3V Hydro-optical structure of the Black Sea active water layer in the spring-summer period of 2017 [10833-75]

10833 3W Formation peculiarities of total suspended and dissolved organic matter fields structure in the northwestern part of the Black Sea according to data of hydrooptical observations [10833-76]

10833 3X Influence of the direction of sound propagation along vertical atmospheric paths on the acoustic signal characteristics [10833-82]

10833 3Y Dynamics of turbulence kinetic energy from minisodar measurements [10833-84]
10833 3Z  Adjustment of the vertical distribution of gas content in the air on the outgoing radiation of the atmosphere [10833-86]

10833 40  Results of observations of meteorological parameters pulsations in the surface layer [10833-87]

10833 41  Formation peculiarities of natural and pollutant substances' fields structure in Balaklava bay (Sevastopol) according to hydrooptic observations data [10833-88]

10833 42  Comparison of atmospheric aerosol optical depths measured with different sun photometers in three regions of Splitsbergen Archipelago [10833-90]

10833 43  Estimate of methane-capacity of aerogel samples of different compositions [10833-93]

10833 44  Interannual variability of average effective aerosol concentration fields in the Far Eastern region [10833-95]

10833 45  Robust nonparametric estimations of the wind velocity functionals from minisodar measurements [10833-99]

10833 46  Appearance of the corner reflection effect in cirrus clouds for off-zenith lidar profiling [10833-104]

10833 47  Investigations of the crystalline particle orientation in high-level clouds with a scanning lidar [10833-106]

10833 48  Study of aerosol in near-surface layer of the marine and coastal atmosphere by the methods of microphysical and optical measurements, analysis, and simulation [10833-121]

10833 49  Aerosol model MaexPro in the problems related to spectral transparency of the coastal atmosphere [10833-122]

10833 4A  Attenuation of optical radiation as a function of particle size spectrum [10833-123]

10833 4B  AVHRR-based regional algorithms for retrieving water clarity in Lake Baikal [10833-125]

10833 4C  Anomalous vertical distribution of stratospheric aerosol layer over Tomsk in December 2017–January 2018 [10833-126]

10833 4D  Aerosol disturbances of the stratosphere over Tomsk in 2017 according to data of Lidar observations [10833-127]

10833 4E  Spectral bands selection for LIF oil contamination detection on the terrestrial surface on the basis of Jeffreyys-Matusita distance [10833-129]

10833 4F  Analysis of Black Carbon fraction and aerosol scattering coefficient in smokes of remote forest fires and winter urban smogs [10833-130]

10833 4G  Remote sensing and modeling of the evolution of suspended matter in the Sea of Azov [10833-134]

10833 4H  Filtering algorithm of the optical rain gauge data and results of the algorithm usage [10833-136]

10833 65 Dissolved and suspended matter variability in coastal waters: photosynthetic available light [10833-336]

10833 66 Numerical simulation of light scattering in the seawater with arbitrary level of inelastic scattering [10833-337]

10833 67 Methods of determining the height of the lower border of clouds from the lidar signal [10833-339]

10833 68 Light absorption by phytoplankton, non-algal particles and colored dissolved organic matter in the Sea of Azov in January and April 2016 [10833-340]

10833 69 Doppler fiber lidar wind speed measurement [10833-341]

10833 6A Methane vertical profiles retrieval from IASI/METOP and TANSO-FTS/GOSAT data [10833-342]

10833 6B Light absorption by non-algal particles and colored dissolved organic matter at the wavelength of 490 nm in the Black Sea in the autumn (2015 and 2016) [10833-343]

10833 6C Dynamics in pigment concentration and light absorption by phytoplankton, non-algal particles and colored dissolved organic matter in the Black Sea coastal waters (near Sevastopol) [10833-345]

10833 6D Focusing of sonar images as an inverse problem for radiative transfer equation [10833-349]

10833 6E The functions of fluctuations of a laser beam of remote sensing and self-radiation of a flame in modeling a fiery vortex [10833-350]

10833 6F The analysis of differential absorption method equations for the outgoing radiation two-layer atmosphere [10833-352]

10833 6G Research of correlation dependences meteorological parameters [10833-353]

10833 6H Dynamics of surface carbon dioxide and methane concentrations on the Arctic Belyy Island in 2015-2017 summertime [10833-360]
Investigation of the engine-gear vortex with LIDAR and CFD

Preliminary estimation of forest fire danger using LANDSAT images over Baikal Lake basin forests

The daily variation of the concentration of suspended particles in the surface layer of the atmosphere of the village Berezovka (Krasnoyarsk region)

Contours of spectral lines and temporal characteristics of emission spectra in plasma of optical breakdown generated by single femtosecond laser pulses on surface of water solutions

Dependence of fluorescence intensity on chlorophyll a concentration and light absorption coefficients by phytoplankton in the Black Sea (October 2017)

Kinetics of light-induced sedimentation of nanoparticles

Optical diagnostics of sedimentation of nanoparticles in liquid

Nitrogen oxides in the atmosphere of coastal areas of Lake Baikal: sources and possible impact on the ecosystem of the lake

Part Three

Generalization of the formula for the complete evaporation time of single atmospheric aerosol drops by operator methods for two drops of arbitrary radii

Depolarization calibration of the polarization lidar by using fitting method

Limit of detection and dynamics of fluorescence spectrums of different types of oil products by induced femtosecond pulses

Method of femtosecond laser-induced breakdown spectroscopy for monitoring the seawater elemental composition

Using wind profiler data to identify classification of rainfall

Lidar measurements of tropospheric aerosol in the frameworks of LRMC - 2017

Advanced methods for the study of regional climate-ecological systems under natural and manmade impacts (Invited Paper)

Relation of integral moisture content of the atmosphere with elements of general circulation the atmosphere over the Eurasian continent
Spatio-temporal distribution of air humidity over territory of the Siberian region

Long-term forecast of the lower cloudiness on the basis of the three-dimensional dynamic stochastic model

Atmospheric electric field in megacity aerosol pollution conditions

Acoustic and electric field variations during strong frontal disturbances propagation

Infrasound noises of megapolis

GFS model-based short-term fire weather forecasting

PAHs transfer and intake to the water area of Lake Baikal during the summer forest fires in 2016

Influence of macrocyclic climate characteristics on the extreme precipitation in Irkutsk oblast

Analysis of relation of Central England surface air temperature to the 11-year solar cycle

Analysis of transport of smoke aerosol in the atmosphere of the Baikal region by data of NAAPS and CALIPSO

The polarizing and angular features of backscatter and radiation of the plowed soil

Variability of gas impurities in the ground atmosphere of South-Eastern Siberia

Modern and projected changes of extreme summer precipitation in the Far East of Russia

Tropospheric refraction of radio waves in the Baikal zone in different seasons of the year

On the spectral albedo of the Earth as an indicator of the evolution of the climate and the planet

Objectively and manually identified characteristics of mid-latitude storms: a comparison for Siberian region

Tropospheric lapse rate and its changes in the Arctic from reanalysis data

Eddy transport in the stably stratified planetary boundary layers and in the free atmosphere: upper troposphere and lower stratosphere

Changes in the synoptic regime of Tomsk over the period of 1993-2016

Thermodynamic characteristics of a superstorm over the Black Sea
Classification of cloudiness from MODIS satellite data using regional statistical models for image texture and physical parameters of cloudiness during periods with snow cover

Georadar sensing of natural and artificial objects

Results of monitoring of the vertical carbon dioxide flux in the atmospheric surface layer of a background region of Western Siberia

A link between June cold air outbreaks in Moscow and long range air transport

A link between sea ice concentration in Kara Sea in November and large scale atmospheric circulation

Potential sources of tropospheric nitrogen dioxide for Western Moscow Region, Russia

Seasonal variability of range, distance, height and speed of air masses’ transport in the surface layer to Moscow, Russia

An influence of transboundary transport to the aerosols of the Southern Russian Far East by data of AERONET Ussuriysk site, Russia

Regions of potential sources of precipitation in Moscow, Russia

Perspectives of monitoring of atmospheric-electric effects from volcanic eruptions in Kamchatka

Lightning discharges distribution estimation over the Tomsk region in 2010-2015

Estimation of the subsea permafrost thickness in the Arctic Shelf

Malignant neoplasms on territories with different levels of magnetic fields of industrial frequency

Structure and long-term dynamics of surface atmosphere of Azov-Black Sea region on the base of self-organizing map analysis

The association between geomagnetic activity, meteorological variables, and cardiovascular characteristics of healthy people

Variability of heart rhythm in young men in Yakutia depending on seasonal changes of atmospheric parameters

Variability of atmospheric integral water vapor content as dependent on synoptic processes

Station for the comprehensive monitoring of the atmosphere at Fonovaya Observatory, West Siberia: current status and future needs
Typisation of the chemical composition of the tropospheric aerosol of the south of Western Siberia by the air mass [10833-316]

Detecting embedded convection based on the surface atmospheric electric field data [10833-317]

Simulation of smoke tracers transport in the Baikal region [10833-318]

Interannual variability and trend of total methane content in the atmosphere of Western Siberia in 2003-2017: results of AIRS/Aqua [10833-319]

Extreme heat in June 2012 and 2016 in Western Siberia in the light of long-term change of the macro-scale atmospheric circulation [10833-321]

Anomalous behavior of the electric field of the atmosphere at the extremely low winter temperatures [10833-323]

Local gradient magnetic fields of natural origin and their effects on the electrical activity of the human brain [10833-324]

Variations of temperature profile of the atmosphere at the locations of Yakutsk EAS array and TAIGA observatory [10833-329]

A numerical evaluation of the source identification algorithm for atmospheric chemistry model with the concentrations time series data [10833-330]

Temperature regulations of frozen soils and mountain rocks in the district of Tiksi [10833-331]

Drift of psychophysiological parameters of the human body in conditions of gradient magnetic fields of natural origin [10833-333]

Simulation of dynamic interphase exchange in a two-phase liquid-solid system [10833-334]

Numerical evaluation of the chemical data assimilation system in an urban scenario [10833-338]

Variability of the main climate characteristics in Ekaterinburg during instrumental observations [10833-354]

Investigation of the relation between snow cover and ozone concentration in the surface layer nearby Tomsk [10833-356]

Dynamics of PM2.5 concentration in the surface layer of the Krasnoyarsk atmosphere in winter (2017-2018) [10833-368]

Classification of climate in the northern hemisphere by the envelope of temperature signals [10833-373]

Precipitation in the Lake Baikal basin associated with different patterns of atmospheric blocking over Western Siberia [10833-376]
Regional structure of surface air temperature fluctuations in the Southern Urals

On the conjugate problems of ecology, climate, evolution and remote sensing of the Earth

The total ozone field over the seismically active zones in the Middle East region in late 2017

The causes of the large-scale ozone depletion over Antarctica in October 2015

Meteor explosion over Northern Finland on November 16, 2017: ionospheric effects in the high-latitude lower ionosphere

Vertical structure of temperature variations over European Russia in 2010 derived from MLS satellite observations

Geophysical effects of solar flare on 6 September 2017

Threats of the Agung volcano and the 55th anniversary of the opening of stratospheric aerosol layers by space Earth remote sensing

The effect of the 27-day solar cycle on the wave activity of the atmosphere calculated by a chemistry-climate model

Substorm activity during the magnetic storms induced by the CIR and ICME events

Time behavior of total aerosol content in the stratosphere on the basis of data from Siberian Lidar Station in the period 2000-2016

Statistical analysis of time behavior of total aerosol content in the stratosphere on the basis of data from Siberian Lidar station in period 2000-2016

Black carbon aerosol in stratosphere

Complex observations at the geophysical observatory “Kiyuchi” during a strong geomagnetic storm in September 2017

Short-term forecast of ionospheric parameters by oblique sounding data

Method of estimation of aerosol thermal-physics properties
