Published by
SPIE

Volume 10957
The papers in this volume were part of the technical conference cited on the cover and title page. Papers were selected and subject to review by the editors and conference program committee. Some conference presentations may not be available for publication. Additional papers and presentation recordings may be available online in the SPIE Digital Library at SPIEDigitalLibrary.org.

The papers reflect the work and thoughts of the authors and are published herein as submitted. The publisher is not responsible for the validity of the information or for any outcomes resulting from reliance thereon.

Please use the following format to cite material from these proceedings:

ISSN: 0277-786X (print)
ISSN: 1996-756X (electronic)

Paper Numbering: Proceedings of SPIE follow an e-first publication model. A unique citation identifier (CID) number is assigned to each article at the time of publication. Utilization of CIDs allows articles to be fully citable as soon as they are published online, and connects the same identifier to all online and print versions of the publication. SPIE uses a seven-digit Article CID numbering system structured as follows:

- The first five digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc. The CID Number appears on each page of the manuscript.
Contents

THE FUTURE IS HIGH NA

10957 08  Overview and status of the 0.5NA EUV microfield exposure tool at Berkeley Lab (Invited Paper) [10957-4]
10957 09  High NA EUV lithography: next step in EUV imaging [10957-5]

INORGANIC RESISTS: JOINT SESSION WITH CONFERENCES 10960 AND 10957

10957 08  The role of the organic shell in hybrid molecular materials for EUV lithography [10957-7]
10957 0D  Zinc-based metal oxoclusters: towards enhanced EUV absorptivity [10957-9]

STOCHASTICS AND EXPOSURE MECHANISMS: JOINT SESSION WITH CONFERENCES 10960 AND 10957

10957 0E  Stochastic printing failures in EUV lithography (Invited Paper) [10957-10]
10957 0F  Fundamentals of resist stochastics effect for single-expose EUV patterning [10957-11]

ORDER FROM CHAOS: STOCHASTIC MODELING

10957 0G  Impact of asymmetrically localized and cascading secondary electron generation on stochastic defects in EUV lithography [10957-12]
10957 0H  Impact of local variability on defect-aware process windows (Invited Paper) [10957-13]
10957 0I  Unraveling the EUV photoresist reactions: which, how much, and how do they relate to printing performance (Invited Paper) [10957-14]
10957 0J  OPC strategies to reduce failure rates with rigorous resist model stochastic simulations in EUVL [10957-15]

Implementation of different cost functions for EUV mask optimization for next generation beyond 7 nm [10957-35]

EUV IMAGING ENHANCEMENT II

Compatibility assessment of novel reticle absorber materials for use in EUV lithography systems [10957-36]
Advanced multilayer mirror design to mitigate EUV shadowing [10957-38]

EUV OPC AND MODELING: JOINT SESSION WITH CONFERENCES 10957 AND 10962

Mask 3D effect reduction and defect printability of etched multilayer EUV mask [10957-46]
Development of fast rigorous simulator for large-area EUV lithography simulation [10957-45]

POSTER SESSION

Actinic inband EUV reflectometry AIMER compared to ALS blank qualification and applied to structured masks [10957-47]
High-precision MoSi multilayer coatings at high-volume for continued EUVL infrastructure development [10957-49]
The defect mitigation on EUV stack by track based technology [10957-50]
EUV-LET 2.0: a compact exposure tool for industrial research at a wavelength of 13.5 nm [10957-51]
Photon detector calibration in the EUV spectral range at PTB [10957-52]
Line-edge roughness on fin-field-effect-transistor performance for below 10nm patterns [10957-54]
Calibrated PSCAR stochastic simulation [10957-56]
Novel technologies in coater/developer to enhance the CD stability and to improve the defectivity toward N7 and smaller nodes [10957-57]
Simulation of statistical effects in exposure and development of EUV photoresists using the percolation and diffusion limited aggregation model [10957-58]
Update of the development progress of the high power LPP-EUV light source using a magnetic field [10957-61]

Achieving diffraction-limited performance on the Berkeley MET5 [10957-67]
