Image and Signal Processing for Remote Sensing XXV

Lorenzo Bruzzone
Francesca Bovolo
Jon Atli Benediktsson
Editors

9–11 September 2019
Strasbourg, France

Sponsored by
SPIE

Cooperating Organisations
European Optical Society
ISPRS—International Society for Photogrammetry and Remote Sensing
EARSeL—European Association of Remote Sensing Laboratories (Germany)

Published by
SPIE
The papers in this volume were part of the technical conference cited on the cover and title page. Papers were selected and subject to review by the editors and conference program committee. Some conference presentations may not be available for publication. Additional papers and presentation recordings may be available online in the SPIE Digital Library at SPIEDigitalLibrary.org.

The papers reflect the work and thoughts of the authors and are published herein as submitted. The publisher is not responsible for the validity of the information or for any outcomes resulting from reliance thereon.

Please use the following format to cite material from these proceedings:

EAN: 9781510630130

Paper Numbering: Proceedings of SPIE follow an e-First publication model. A unique citation identifier (CID) number is assigned to each article at the time of publication. Utilization of CIDs allows articles to be fully citable as soon as they are published online, and connects the same identifier to all online and print versions of the publication. SPIE uses a seven-digit CID article numbering system structured as follows:

- The first five digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B … 0Z, followed by 10-1Z, 20-2Z, etc. The CID Number appears on each page of the manuscript.

Remote sensing and machine learning for tree detection and classification in forestry applications [11155-14]

On-line learning tracking-by-segmentation of spacecraft observed by satellite-based imaging system [11155-15]

SESSION 4  HYPERSPECTRAL IMAGE ANALYSIS

A pixel-by-pixel NMF-based method for hyperspectral unmixing using a new linear mixing model to address additively-tuned spectral variability [11155-16]

GWENN-SS: a simple semi-supervised nearest-neighbor density-based classification method with application to hyperspectral images [11155-17]

Ship detection and classification with terrestrial hyperspectral data based on convolutional neural networks [11155-18]

Hyperspectral target detection using cluster-based probability models implemented in a generalized likelihood ratio test [11155-19]

Performance evaluation of convolutional neural network at hyperspectral and multispectral resolution for classification [11155-20]

SESSION 5  DEEP LEARNING I

Building segmentation of remote sensing images using deep neural networks and domain transform CRF [11155-21]

Deep learning-based extraction of building contours for large-scale 3D urban reconstruction [11155-22]

Object detection in satellite images based on human cooperative semi-self-training [11155-23]

Dense-HSGP: dense hierarchical spatial Gaussian-based pooling for very high-resolution building extraction [11155-24]

ClusterNet: unsupervised generic feature learning for fast interactive satellite image segmentation [11155-25]

SESSION 6  DEEP LEARNING II

Approximating JPEG 2000 wavelet representation through deep neural networks for remote sensing image scene classification [11155-26]

Recurrent feedback CNN for water region estimation from multitemporal satellite images [11155-27]
Spectral perturbation method for deep learning-based classification of remote sensing hyperspectral images | [11155-30]

Deep learning for dense labeling of hydrographic regions in very high resolution imagery | [11155-63]

SESSION 7  ANALYSIS OF MULTITEMPORAL IMAGES

Detecting ineligible features in agricultural fields on multitemporal high resolution satellite images using a two-stage DNN architecture | [11155-31]

Identification of non-photosynthetic vegetation areas in Sentinel-2 satellite image time series | [11155-32]

Monitoring of changes in vegetation status through integration of time series of hyper-sharpened Sentinel-2 red-edge bands and information-theoretic textural features of Sentinel-1 SAR backscatter | [11155-33]

Unsupervised change-detection based on convolutional-autoencoder feature extraction | [11155-34]

A comparative study of coherence estimators for interferometric SAR image co-registration and coherent change detection | [11155-35]

SESSION 8  ESTIMATION AND COMPRESSION

Lossy DCT-based compression of remote sensing images with providing a desired visual quality | [11155-36]

Integration of hydro-climatological model and remote sensing for glacier mass balance estimation | [11155-37]

Blind noise parameters estimation for multichannel images using deep convolutional neural networks | [11155-38]

Pixel level smoke detection model with deep neural network | [11155-39]

Fusion of diverse performance inertial sensors for improved attitude estimation within a stabilisation platform for electro-optic systems | [11155-40]

SESSION 9  ANALYSIS OF SAR AND RADAR DATA

Efficient time-domain back-projection focusing core for the image formation of very high resolution and highly squinted SAR Spotlight data on scenes with strong topography variation | [11155-42]
SAR image simulation for performance assessment

An automatic approach to map refreezing ice in radar sounder data

SESSION 10  SAR DATA PROCESSING I: JOINT SESSION

ISAR autofocus based on sparsity-driven estimation of translational and rotational motion components

SESSION 11  SAR DATA PROCESSING II: JOINT SESSION

Analysis and suppression of bias effect in sparse SAR imaging

POSTER SESSION

Infrared small target detection based on reweighted infrared patch-image model and total variation regularization

Sparse representation with constraints for target detection in hyperspectral imagery

Urban scene segmentation using semi-supervised GAN

Super resolution of DS-2 satellite imagery using deep convolutional neural network

3D radar sounder simulations of geological targets on Ganymede Jovian Moon

DEM generation using point cloud from ICESat and high-resolution satellite stereo images for Indian region

A public dataset for ship classification in remote sensing images

Land cover classification and change detection analysis of multispectral satellite images using machine learning

Training lightweight network from scratch for efficient object detection in aerial images

UAV-based hyperspectral imaging detection for explosives and contaminants

Detection of forest disaster using satellite images with semantic segmentation

Modeling and simulation of imaging procession on dispersive imaging spectrometer
Multisensor image fusion based on generative adversarial networks

Corner reflector based X-band DInSAR experiment over Jharia Coal Field, India

3D stereo reconstruction: high resolution satellite video

Recognition of low-resolution objects in remote sensing images

Hyperspectral band quality analysis based on dictionary representation

Extraction of built-up areas from remote sensing imagery using one-class classification

Retrieval of precipitation based on microwave sensor of satellite using deep learning and blending grid-based multi-satellite precipitation using EBMA

Wind turbine segmentation performing kNN-clustering on superpixel segmentations

A comparison of techniques to model and measure spatial resolution in hyperspectral imaging sensors

Sea level prediction based on the long time series satellite observations

A method for reducing scanning error rate of LIDAR using a galvanometer

Crop classification based on lightened convolutional neural networks in multispectral images

Chimney and condensing tower detection based on FPN in high resolution remote sensing images

An onboard-camera pose estimation method based on 3D digital surface model

Clouds segmentation on panchromatic high spatial resolution remote sensing images using convolutional neural networks
