7th Iran Wind Energy Conference (IWEC 2021)

Shahrood, Iran
17 – 18 May 2021
Table of Content

Techno-economic Assessment for Installing Small Wind Turbine at Subornochar Region in Bangladesh. 1

Improved Fault Ride Through Strategy Of Doubly Fed Induction Generator based Wind Turbine Using Model Predictive Control.................................................................................................................. 7

Using Type-2 Fuzzy In Decision-Making For Wind Potential Assessment In Iran ................................ 13

Performance Enhancements of Savonius Wind Turbine using a Hybrid Augmentation System ........... 18

A Method Based on Fast Fourier Transform for Online Supervising of Power System and Control Structure Design ........................................................................................................................................ 23

Simulation and Optimization of Ducted Wind Turbines using the Response Surface Methodology and Analytical Hierarchical Process .................................................................................................. 29

Energy Management of Reconfigurable Distribution System in Present of Wind Turbine by Considering Several Kinds of Demands........................................................................................................... 35

Impacts of Contributing Distribution Network Operator (DNO) and Distributed Generation Unit Operator (DGO) in Benefit Maximizing ........................................................................................................ 39

Inertia Emulation with the Concept of Virtual Supercapacitor for Islanded DC Microgrid .................... 43

Dynamic Voltage Restorer based on a New Step-up Switched Capacitor Multilevel Inverter for Fault Ride-Through of Wind Generators ......................................................................................................... 47

Optimization of an Industrial Township Costs from an Industrial Service Company View (Case Study: A Distributed Gas-Fired CHP) ........................................................................................................ 52

Transient Analysis of LCC based HVDC Offshore Wind Farms using DiGILENT PowerFactory ....... 57

Imbalance Power Sharing Improvement in Autonomous Microgrids Consisting of Grid-Feeding and Grid-Supporting Inverters .................................................................................................................. 62

Analysis of Wind Generator Contribution on load Frequency Control Considering Control Signals Delays ......................................................................................................................................................... 68

Damping Improvement of Inter-Area Oscillations Using Large-Scale Wind Farms ............................ 73
DC Microgrid Voltage Stability through Inertia Enhancement Using a Bidirectional DC-DC Converter. 78

Reliability and Economic Indices Assessment in Interconnected Microgrids ........................................... 83

Effect of Sag Voltages From Wind Turbines on DC Link Capacitors of Adjustable Speed Drives .......... 89

Fault Location Identification in Meshed AC Microgrids Using Interharmonic Injection ....................... 94

The New Adaptive Protection Method for the Compensated Transmission Lines with the Series Capacitor in a High Share of Wind Energy Resources by Using PMU Data .................................................. 100

Conceptual Design and Initial Analysis of an Oscillating Wind Turbine ................................................. 105

Investigating the Impact of Wind Farms Energy Yields on Reduction of Power Plants Natural Gas Consumptions and CO2 Emissions: A Practical Case Study in Iran ......................................................... 111

Comparison of Monte Carlo Simulation and Genetic Algorithm in Optimal Wind Farm Layout Design in Manjil Site Based on Jensen Model ...................................................................................... 115

Robust Site Selection of Solar/Wind Farms Using Neural Networks and Analytic Hierarchy Process ... 119

Numerical Study of Savonius Wind Turbine Start-up Considering the Rotor moment of Inertia in Sinusoidal Unsteady Wind Conditions ......................................................................................... 123

A Numerical Study of INVELOX Wind Turbine Considering the Inlet Shape Design ......................... 129

Assessment of Electric Energy Generation using Wind Energy in Turkey ................................................. 134

Wind Energy Generators Fault Current Protection: Structures Survey ................................................. 137

Techno-economic Analysis of Wind Turbines Systems to Reduce Carbon Emission of Greenhouses: A Case Study in Iran ........................................................................................................... 143

Modeling and Simulation of an Airborne Wind Turbine ......................................................................... 147

Spectral Analyses of an Optimized Ducted Wind Turbine using Hot-Wire Anemometry .................... 153

Evaluation of Wind Power Plant Potentials in the Marmara Region, Turkey via TOPSIS and PROMETHEE Methods .................................................................................................................. 157

Wind-Solar Site Selection using a GIS-MCDM-based Approach with an Application in Kayseri Province/Turkey ....................................................................................................................... 161
Flow Physics Analysis of a Vertical Axis Wind Turbine Using FloEFD ................................. 165

An Efficient Trombe Wall with Building Integrated Wind Turbine ........................................... 169

Design Strategies and Performance Comparison Of Software & Hardware Damping of Resonance Spike ................................................................................................. 172

Study on Inter-Turn Short Circuit Fault and High Resistance Connection in the Stator of Doubly-Fed Induction Generators ................................................................................. 178

A Novel Short Term Wind Speed Forecasting based on Hybrid Neural Network: A Case Study on Smart City in India ................................................................. 184

A Data-driven Bidding Strategy of a Wind-Diesel-Electrical Storage Hybrid System in a day-ahead Electricity Market ............................................................... 188

Aeroelastic Stability of Horizontal Axis Wind Turbine Blades ....................................................... 193
